

Dimitrios Kolymbas (Ed.)

Advanced Mathematical and Computational Geomechanics

Springer

Contents

AUTHORS (alphabetical listing)	XIII
---	-------------

Part I Material Modelling

On thermodynamic modeling and the role of the second law of thermodynamics in geophysics

<i>Krzysztof Wilmanski</i>	3
1 Introduction	3
2 Motivation	4
3 Two simple examples of evaluation of the second law	8
4 Simple and Biot-type poroelastic nonlinear models	16
5 Micro-macro-transitions for linear poroelastic materials	26
6 Concluding remarks	31
References	32

Some mathematics for the constitutive modelling of soils

<i>Guy T. Houlsby</i>	35
1 Potentials and the Legendre Transform	35
2 Functionals and Frechet derivatives	41
3 Convex Analysis	42
4 Conclusions	52
References	53

Elasticity in constitutive modeling of soils

<i>Alexander M. Puzrin</i>	55
1 Introduction	55
2 Elasticity in Geotechnical Engineering	56
3 Elasticity in Small Strain Behavior of Soils	58
4 Elasticity in Advanced Plasticity Theories	62
5 Elasticity in Thermomechanics	64

6	Elasticity in Micromechanics	67
7	Thermomechanics of Elasto-Plastic Coupling.....	71
8	Conclusions.....	73
	References	73

Experimental characterization of localized deformation in geomaterials

	<i>Jacques Desrues</i>	77
1	Introduction	77
2	Shear bands in field cases and laboratory tests	79
3	Localization in granular bodies	80
4	Localization in cohesive geomaterials.....	92
	References	102

Discontinuous character of rock masses: some open questions related to rock fracture mechanics and scale effects

	<i>Marta Castelli, Valeria Saetta, Claudio Scavia</i>	107
1	Introduction	107
2	Discontinuum methods: the Displacement Discontinuities Method ..	108
3	Conclusions and further developments.....	137
	Bibliography	137
	References	138

Similarity in soil and rock mechanics

	<i>Dimitrios Kolymbas</i>	141
1	Introduction	141
2	Scaling of size	142
3	Scaling of stress	152
4	Time scale.....	156
5	Π -theorem and dimensional analysis	161
	References	163

Part II Modelling of Boundary Value Problems

Numerical predictions and reality

	<i>Ivo Herle</i>	167
1	Introduction	167
2	Predictions	167
3	Benchmarks	172
4	Making predictions	178
5	Concluding remarks	190
	References	191

Objective integration and geometric properties of hypoplasticity

<i>Wolfgang Fellin, Alexander Ostermann</i>	195
1 Introduction	195
2 Notions from continuum mechanics	196
3 Hypoplasticity	198
4 Objective time stepping	199
5 Geometric theory for element tests	202
6 Conclusions.....	209
References	209

Using constitutive models of the rate type in implicit finite-element calculations: error-controlled stress update and consistent tangent operator

<i>Wolfgang Fellin, Alexander Ostermann</i>	211
1 Introduction	211
2 A short introduction to hypoplasticity	212
3 A one-dimensional illustration of the consistent tangent operator for hypoplasticity.....	216
4 A general approach for consistent tangent operators	226
5 An illustrative academic example	229
6 Finite-element Example	234
7 Conclusions.....	236
References	237

Efficient and Reliable

Nonlocal Damage Models

<i>Antonio Huerta, Antonio Rodríguez-Ferran, Irene Morata</i>	239
1 Introduction	239
2 Material Modelling	241
3 Numerical Aspects	245
4 Applications	254
5 Concluding Remarks.....	264
References	266

Regularized formulations of strain-softening plasticity

<i>Milan Jirásek, Simon Rolshoven</i>	269
1 Introduction	269
2 Problems with Objective Description of Strain Localization	270
3 Strain-Gradient Theories	276
4 Explicit Models with Gradients of Internal Variables	284
5 Implicit Gradient Models.....	286
6 Nonlocal Integral Models	292
7 Concluding Remarks.....	297
References	298

Fuzzy data in geotechnical models

<i>Michael Oberguggenberger</i>	301
1 Introduction	301
2 Models of parameter variability	303
3 Computing with fuzzy sets	308
References	312
