Operations Research
Models and Methods

CD Included

Paul A. Jensen & Jonathan F. Bard

1 Problem Solving with Operations Research 1

1.1 The Problem-Solving Process 2
1.2 Problems, Models, and Methods 10
1.3 About This Book 12
Exercises 16
Bibliography 16

2 Linear Programming Models 17

2.1 A Manufacturing Example 18
2.2 Computational Considerations 23
2.3 Solution Characteristics 25
2.4 Solutions and Sensitivity Analysis 30
2.5 Problem Classes 37
Exercises 51
Bibliography 55

3 Linear Programming Methods 56

3.1 Standard Form of the Model 56
3.2 Preparing the Model 58
3.3 Geometric Properties of a Linear Program 61
3.4 Simplex Tableau 66
3.5 Information from the Simplex Form 70
3.6 Simplex Method Using Tableaus 78
3.7 Special Situations 81
3.8 The Initial Basic Feasible Solution 86
3.9 Dual Simplex Algorithm 89
3.10 Simplex Method Using Matrix Notation 95
3.11 Revised Simplex Method 99
Exercises 103
Bibliography 109

4 Sensitivity Analysis, Duality, and Interior Point Methods 111

4.1 Sensitivity Analysis 112
4.2 The Dual Linear Program 118
4.3 Interior Point Methods 129
Exercises 140
Bibliography 144

5 Network Flow Programming Models 146

5.1 Classical Problems 148
5.2 Extensions of the Basic Models 154

5.3 Linear Programming Model 166
5.4 Minimum-Cost Flow Problem 168
Exercises 174
Bibliography 181

6 Network Flow Programming Methods 182

6.1 Transportation Problem 182
6.2 Shortest Path Problem 194
6.3 Maximum Flow Problem 199
6.4 Pure Minimum-Cost Flow Problem 203
Exercises 215
Bibliography 221

7 Integer Programming Models 223

7.1 Site Selection Example 223
7.2 General Considerations 226
7.3 System Design with Fixed Charges 229
7.4 Facility Location Problem 232
7.5 Covering and Partitioning Problems 235
7.6 Distance Problems 237
7.7 Examples 243
7.8 Nonlinear Objective Function 250
Exercises 255
Bibliography 264

8 Integer Programming Methods 266

8.1 Greedy Algorithms 266
8.2 Solution by Enumeration 270
8.3 Branch and Bound 278
8.4 Cutting Plane Methods 291
8.5 Additional Cuts 303
Exercises 306
Bibliography 313

9 Nonlinear Programming Models 315

9.1 Manufacturing Example 315
9.2 General Considerations 320
9.3 Determining Convexity 328
9.4 Applications 335
9.5 Problem Classes 346
Exercises 351
Bibliography 358

10 Nonlinear Programming Methods 359

10.1 Classical Optimization 360
10.2 Equality Constraints 369
10.3 Inequality Constraints 372
10.4 Separable Programming 379
10.5 Quadratic Programming 385

10.6 One-Dimensional Search Methods 388
10.7 Multidimensional Search Methods 396
Exercises 405
Bibliography 408

11 Models for Stochastic Processes 409

11.1 Continuous-Time Markov Chains 410
11.2 Realization of the Process 413
11.3 Discrete-Time Markov Chains 415
11.4 Examples of Stochastic Processes 419
11.5 Assessment of Stochastic Models 423
Exercises 423
Bibliography 426

12 Discrete-Time Markov Chains 427

12.1 Transition Matrix 428
12.2 Multistep Transitions 436
12.3 Steady-State Solutions 439
12.4 Economic Analysis 442
12.5 Applications 445
Exercises 457
Bibliography 465

13 Mathematics of Discrete-Time Markov Chains 466

13.1 State-Transition Probabilities 466
13.2 Classification of States 468
13.3 Multistep Transition Matrix 473
13.4 Transient Probability Vector 474
13.5 Steady-State Probabilities 474
13.6 Economic Analysis 478
13.7 First Passage Times 482
13.8 Absorbing State Probabilities 486
Exercises 488
Bibliography 492

14 Continuous-Time Markov Chains 493

14.1 Markovian Property 493
14.2 Model Components 496
14.3 Transient Solutions 500
14.4 Steady-State Solutions 502
14.5 Design Alternatives for the ATM System 503
14.6 Birth and Death Processes 507
14.7 Probabilistic Transitions 518
Exercises 521
Bibliography 525

15 Mathematics of Continuous-Time Markov Chains 526

15.1 Embedded Discrete-Time Markov Chain 526
15.2 Steady-State Probabilities 530

15.3 Economic Analysis 536
15.4 First Passage Times 540
15.5 Birth-Death Precesses 542
Exercises 547
Bibliography 549

16 Queuing Models 550

16.1 System Characteristics 551
16.2 Markov Queuing Systems 557
16.3 Non-Markov Systems 575
Exercises 579
Bibliography 585

17 Queuing Networks and Decision Models 586

17.1 Jackson Networks 586
17.2 Network Examples 589
17.3 Expected Flow Time through the Network 594
17.4 Non-Poisson Networks 596
17.5 Optimal Design of Queues 599
17.6 Systems with Travel Times 603
Exercises 607
Bibliography 613

18 Simulation 614

18.1 Nature and Purpose of Simulation 615
18.2 Model Components 617
18.3 Inverse Transformation Method for Generating Random Variates 619
18.4 Simulating Complex Random Variables 625
18.5 Discrete-Event Dynamic Simulation 628
18.6 Simulation of an Inventory System 638
18.7 Steps in a Simulation Study 643
18.8 Implementation Issues 649
18.9 Assessment of Simulation Methodology 656
Exercises 657
Bibliography 667

Index 669
