

INTERNATIONAL EDITION

DESIGN of CONCRETE STRUCTURES

T H I R T E E N T H E D I T I O N

ARTHUR H. NILSON DAVID DARWIN CHARLES W. DOLAN

Contents

About the Authors		v
Preface		xv
Chapter 1	Introduction	1
	1.1 Concrete, Reinforced Concrete, and Prestressed Concrete	1
	1.2 Structural Forms	2
	1.3 Loads	8
	1.4 Serviceability, Strength, and Structural Safety	12
	1.5 Design Basis	15
	1.6 Design Codes and Specifications	16
	1.7 Safety Provisions of the ACI Code	17
	1.8 Fundamental Assumptions for Reinforced Concrete Behavior	19
	1.9 Behavior of Members Subject to Axial Loads	20
	References	26
	Problems	27
Chapter 2	Materials	28
	2.1 Introduction	28
	2.2 Cement	28
	2.3 Aggregates	29
	2.4 Proportioning and Mixing Concrete	31
	2.5 Conveying, Placing, Compacting, and Curing	33
	2.6 Quality Control	34
	2.7 Admixtures	36
	2.8 Properties in Compression	38
	2.9 Properties in Tension	43
	2.10 Strength under Combined Stress	45
	2.11 Shrinkage and Temperature Effects	47
	2.12 High-Strength Concrete	50
	2.13 Reinforcing Steels for Concrete	51
	2.14 Reinforcing Bars	52
	2.15 Welded Wire Reinforcement	58
	2.16 Prestressing Steels	59
	References	61

Chapter 3	Flexural Analysis and Design of Beams	64
3.1	Introduction	64
3.2	Bending of Homogeneous Beams	64
3.3	Reinforced Concrete Beam Behavior	66
3.4	Design of Tension-Reinforced Rectangular Beams	77
3.5	Design Aids	90
3.6	Practical Considerations in the Design of Beams	93
3.7	Rectangular Beams with Tension and Compression Reinforcement	95
3.8	T Beams	104
	References	110
	Problems	111
 Chapter 4	 Shear and Diagonal Tension in Beams	 114
4.1	Introduction	114
4.2	Diagonal Tension in Homogeneous Elastic Beams	115
4.3	Reinforced Concrete Beams without Shear Reinforcement	118
4.4	Reinforced Concrete Beams with Web Reinforcement	125
4.5	ACI Code Provisions for Shear Design	130
4.6	Effect of Axial Forces	139
4.7	Beams with Varying Depth	144
4.8	Alternative Models for Shear Analysis and Design	145
4.9	Shear-Friction Design Method	155
	References	160
	Problems	161
 Chapter 5	 Bond, Anchorage, and Development Length	 163
5.1	Fundamentals of Flexural Bond	163
5.2	Bond Strength and Development Length	167
5.3	ACI Code Provisions for Development of Tension Reinforcement	172
5.4	Anchorage of Tension Bars by Hooks	176
5.5	Anchorage Requirements for Web Reinforcement	180
5.6	Welded Wire Reinforcement	181
5.7	Development of Bars in Compression	182
5.8	Bundled Bars	182
5.9	Bar Cutoff and Bend Points in Beams	183
5.10	Integrated Beam Design Example	191
5.11	Bar Splices	195
	References	198
	Problems	198
 Chapter 6	 Serviceability	 203
6.1	Introduction	203
6.2	Cracking in Flexural Members	203
6.3	ACI Code Provisions for Crack Control	206
6.4	Control of Deflections	209

6.5	Immediate Deflections	209
6.6	Deflections Due to Long-Term Loads	212
6.7	ACI Code Provisions for Control of Deflections	215
6.8	Deflections Due to Shrinkage and Temperature Changes	221
6.9	Moment vs. Curvature for Reinforced Concrete Sections	224
	References	228
	Problems	228
Chapter 7	Analysis and Design for Torsion	231
7.1	Introduction	231
7.2	Torsion in Plain Concrete Members	232
7.3	Torsion in Reinforced Concrete Members	235
7.4	Torsion Plus Shear	239
7.5	ACI Code Provisions for Torsion Design	240
	References	249
	Problems	249
Chapter 8	Short Columns	251
8.1	Introduction: Axial Compression	251
8.2	Lateral Ties and Spirals	253
8.3	Compression Plus Bending of Rectangular Columns	258
8.4	Strain Compatibility Analysis and Interaction Diagrams	259
8.5	Balanced Failure	261
8.6	Distributed Reinforcement	265
8.7	Unsymmetrical Reinforcement	267
8.8	Circular Columns	268
8.9	ACI Code Provisions for Column Design	269
8.10	Design Aids	271
8.11	Biaxial Bending	274
8.12	Load Contour Method	276
8.13	Reciprocal Load Method	277
8.14	Computer Analysis for Biaxial Bending of Columns	280
8.15	Bar Splicing in Columns	281
	References	282
	Problems	283
Chapter 9	Slender Columns	287
9.1	Introduction	287
9.2	Concentrically Loaded Columns	288
9.3	Compression Plus Bending	291
9.4	ACI Criteria for Neglecting of Slenderness Effects	297
9.5	ACI Criteria for Nonsway Versus Sway Frames	298
9.6	ACI Moment Magnifier Method for Nonsway Frames	299
9.7	ACI Moment Magnifier Method for Sway Frames	307
9.8	Second-Order Analysis for Slenderness Effects	314
	References	317
	Problems	317

Chapter 10	Strut-and-Tie Models	321
10.1	Introduction	321
10.2	Development of Strut-and-Tie Models	321
10.3	Strut-and-Tie Design Methodology	325
10.4	ACI Provisions for Strut-and-Tie Models	331
10.5	Applications	336
	References	345
	Problems	345
Chapter 11	Design of Reinforcement at Joints	347
11.1	Introduction	347
11.2	Beam-Column Joints	348
11.3	Strut-and-Tie Model for Joint Behavior	360
11.4	Beam-to-Girder Joints	361
11.5	Ledge Girders	363
11.6	Corners and T Joints	366
11.7	Brackets and Corbels	368
	References	373
	Problems	373
Chapter 12	Analysis of Indeterminate Beams and Frames	375
12.1	Continuity	375
12.2	Loading	377
12.3	Simplifications in Frame Analysis	379
12.4	Methods for Elastic Analysis	381
12.5	Idealization of the Structure	382
12.6	Preliminary Design and Guidelines for Proportioning Members	388
12.7	Approximate Analysis	389
12.8	ACI Moment Coefficients	393
12.9	Limit Analysis	397
12.10	Conclusion	408
	References	409
	Problems	409
Chapter 13	Analysis and Design of Slabs	412
13.1	Types of Slabs	412
13.2	Design of One-Way Slabs	414
13.3	Temperature and Shrinkage Reinforcement	417
13.4	Behavior of Two-Way Edge-Supported Slabs	420
13.5	Two-Way Column-Supported Slabs	424
13.6	Direct Design Method for Column-Supported Slabs	427
13.7	Flexural Reinforcement for Column-Supported Slabs	433
13.8	Depth Limitations of the ACI Code	435
13.9	Equivalent Frame Method	442
13.10	Shear Design in Flat Plates and Flat Slabs	450

13.11	Transfer of Moments at Columns	464
13.12	Openings in Slabs	467
13.13	Deflection Calculations	469
13.14	Analysis for Horizontal Loads	476
	References	477
	Problems	479
Chapter 14	Yield Line Analysis for Slabs	483
14.1	Introduction	483
14.2	Upper and Lower Bound Theorems	486
14.3	Rules for Yield Lines	486
14.4	Analysis by Segment Equilibrium	490
14.5	Analysis by Virtual Work	492
14.6	Orthotropic Reinforcement and Skewed Yield Lines	497
14.7	Special Conditions at Edges and Corners	499
14.8	Fan Patterns at Concentrated Loads	501
14.9	Limitations of Yield Line Theory	502
	References	503
	Problems	503
Chapter 15	Strip Method for Slabs	508
15.1	Introduction	508
15.2	Basic Principles	509
15.3	Choice of Load Distribution	510
15.4	Rectangular Slabs	513
15.5	Fixed Edges and Continuity	515
15.6	Unsupported Edges	520
15.7	Slabs with Holes	528
15.8	Advanced Strip Method	532
15.9	Comparisons of Methods for Slab Analysis and Design	540
	References	541
	Problems	542
Chapter 16	Footings and Foundations	545
16.1	Types and Functions	545
16.2	Spread Footings	545
16.3	Design Factors	546
16.4	Loads, Bearing Pressures, and Footing Size	547
16.5	Wall Footings	549
16.6	Column Footings	551
16.7	Combined Footings	560
16.8	Two-Column Footings	561
16.9	Strip, Grid, and Mat Foundations	568
16.10	Pile Caps	570
	References	573
	Problems	573

Chapter 17	Retaining Walls	575
	17.1 Function and Types of Retaining Walls	575
	17.2 Earth Pressure	575
	17.3 Earth Pressure for Common Conditions of Loading	579
	17.4 External Stability	580
	17.5 Basis of Structural Design	583
	17.6 Drainage and Other Details	584
	17.7 Example: Design of a Gravity Retaining Wall	585
	17.8 Example: Design of a Cantilever Retaining Wall	587
	17.9 Counterfort Retaining Walls	594
	17.10 Precast Retaining Walls	596
	References	598
	Problems	598
 Chapter 18	 Concrete Building Systems	 599
	18.1 Introduction	599
	18.2 Floor and Roof Systems	600
	18.3 Panel, Curtain, and Bearing Walls	612
	18.4 Shear Walls	614
	18.5 Precast Concrete for Buildings	617
	18.6 Engineering Drawings for Buildings	632
	References	632
 Chapter 19	 Prestressed Concrete	 634
	19.1 Introduction	634
	19.2 Effects of Prestressing	635
	19.3 Sources of Prestress Force	639
	19.4 Prestressing Steels	642
	19.5 Concrete for Prestressed Construction	644
	19.6 Elastic Flexural Analysis	646
	19.7 Flexural Strength	652
	19.8 Partial Prestressing	657
	19.9 Flexural Design Based on Concrete Stress Limits	658
	19.10 Shape Selection	668
	19.11 Tendon Profiles	669
	19.12 Flexural Design Based on Load Balancing	671
	19.13 Loss of Prestress	677
	19.14 Shear, Diagonal Tension, and Web Reinforcement	681
	19.15 Bond Stress, Transfer Length, and Development Length	688
	19.16 Anchorage Zone Design	689
	19.17 Deflection	693
	19.18 Crack Control for Class C Flexural Members	696
	References	697
	Problems	698
 Chapter 20	 Seismic Design	 700
	20.1 Introduction	700
	20.2 Structural Response	702

20.3	Seismic Loading Criteria	707
20.4	ACI Special Provisions for Seismic Design	711
20.5	ACI Provisions for Special Moment Frames	713
20.6	ACI Provisions for Special Structural Walls, Coupling Beams, Diaphragms, and Trusses	723
20.7	ACI Provisions for Shear Strength	726
20.8	ACI Provisions for Intermediate Moment Frames in Regions of Moderate Seismic Risk	730
	References	732
	Problems	732
Appendix A	Design Aids	735
Appendix B	SI Conversion Factors: Inch-Pound Units to SI Units	769
Index		771
