# INTERNATIONAL EDITION

# INTRODUCTION TO POPULATION GENETICS

RICHARD HALLIBURTON

## Contents

## Preface xvii

CHAPTER 1	APTER 1 Introduction 1				
	1.1	Population Biology 2			
	1.2	An Overview of Population Genetics 4			
	1.3	A Short History of Population Genetics 7			
		Variation and Heredity in the Nineteenth Century 7			
		The Conflict Between Mendelians and Biometricians 9			
		Theoretical Population Genetics 10			
		Genetics of Natural Populations 12			
		Molecular Population Genetics 14			
	1.4	Mathematical Models 15			
		An Example 16			
		How to Work with Mathematical Models 17			
		A Simple Model of Recurrent Mutation 18			
		Why Mathematical Models? 21			
		Kinds of Mathematical Models 22			
		How Much Mathematics Do You Need to Know? 23			
	Sumn	nary 24 • Problems 25			
CHAPTER 2	Gen	etic Variation 27			
	2.1	Quantifying Genetic Variation 28			
		Genotype Frequencies and Allele Frequencies 28			
		Estimates of Genotype and Allele Frequencies 30			
		Polymorphism and Heterozygosity 33			
	2.2	The Classical and Balance Hypotheses 34			
	2.3	Genetic and Environmental Variation 35			
	2.4	Variation for Discrete Morphological Characters 36			
	2.5	Variation in Quantitative Characters 38			
	2.6	Chromosomal Variation 38			
	2.7	Hidden Variation for Fitness 42			
	2.8	Human Blood Groups 46			

Allozyme Variation 47

2.9

CHAPTER 3

CHAPTER 4

2.11 Indirect Methods of Inferring DNA Sequence Variation 55 Restriction Fragment Length Polymorphisms 55 Amplified Fragment Length Polymorphisms 58 Random Amplified Polymorphic DNA 58 Single Strand Conformational Polymorphisms 58 DNA Microarrays 59 2.12 Variation in Number of Tandem Repeats 59 Minisatellite Loci and DNA Fingerprinting 60 Microsatellite Loci 62 2.13 Insertion/Deletion Variation 64 2.14 Why Is There So Much Genetic Variation? 65 Summary 66 • Problems 67  The Hardy-Weinberg Principle 69 3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78 3.2 Heterozygosity and Homozygosity 79 3.3 Deviations from Hardy-Weinberg Expectations 81 3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91 4.1 Recombination and Linkage 91		Quantifying variation at the DNA Level 32
Amplified Fragment Length Polymorphisms 58 Random Amplified Polymorphic DNA 58 Single Strand Conformational Polymorphisms 58 DNA Microarrays 59  2.12 Variation in Number of Tandem Repeats 59 Minisatellite Loci and DNA Fingerprinting 60 Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65 Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	2.11	Indirect Methods of Inferring DNA Sequence Variation 55
Random Amplified Polymorphic DNA 58 Single Strand Conformational Polymorphisms 58 DNA Microarrays 59  2.12 Variation in Number of Tandem Repeats 59 Minisatellite Loci and DNA Fingerprinting 60 Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65  Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Restriction Fragment Length Polymorphisms 55
Single Strand Conformational Polymorphisms 58 DNA Microarrays 59  2.12 Variation in Number of Tandem Repeats 59 Minisatellite Loci and DNA Fingerprinting 60 Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65  Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Amplified Fragment Length Polymorphisms 58
DNA Microarrays 59  2.12 Variation in Number of Tandem Repeats 59     Minisatellite Loci and DNA Fingerprinting 60     Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65  Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70     Random Union of Gametes 70     Random Mating 71     Testing Population Samples for Hardy-Weinberg Conditions 73     Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77     Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84     Different Allele Frequencies in Males and Females 84     Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Random Amplified Polymorphic DNA 58
2.12 Variation in Number of Tandem Repeats 59 Minisatellite Loci and DNA Fingerprinting 60 Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65  Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Single Strand Conformational Polymorphisms 58
Minisatellite Loci and DNA Fingerprinting 60 Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65  Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		DNA Microarrays 59
Microsatellite Loci 62  2.13 Insertion/Deletion Variation 64  2.14 Why Is There So Much Genetic Variation? 65  Summary 66 • Problems 67  The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70  Random Union of Gametes 70  Random Mating 71  Testing Population Samples for Hardy-Weinberg Conditions 73  Using the Hardy-Weinberg Principle to Estimate Frequencies of Recess Alleles 77  Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84  Different Allele Frequencies in Males and Females 84  Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	2.12	Variation in Number of Tandem Repeats 59
<ul> <li>2.13 Insertion/Deletion Variation 64</li> <li>2.14 Why Is There So Much Genetic Variation? 65</li> <li>Summary 66 • Problems 67</li> <li>The Hardy-Weinberg Principle 69</li> <li>3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78</li> <li>3.2 Heterozygosity and Homozygosity 79</li> <li>3.3 Deviations from Hardy-Weinberg Expectations 81</li> <li>3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85</li> <li>Summary 87 • Problems 88</li> <li>Recombination, Linkage, and Disequilibrium 91</li> </ul>		Minisatellite Loci and DNA Fingerprinting 60
<ul> <li>2.14 Why Is There So Much Genetic Variation? 65</li> <li>Summary 66 • Problems 67</li> <li>The Hardy-Weinberg Principle 69</li> <li>3.1 The Hardy-Weinberg Principle 70  Random Union of Gametes 70  Random Mating 71  Testing Population Samples for Hardy-Weinberg Conditions 73  Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77  Multiple Alleles 78</li> <li>3.2 Heterozygosity and Homozygosity 79</li> <li>3.3 Deviations from Hardy-Weinberg Expectations 81</li> <li>3.4 Sex and the Hardy-Weinberg Principle 84  Different Allele Frequencies in Males and Females 84  Sex-Linked Loci 85</li> <li>Summary 87 • Problems 88</li> <li>Recombination, Linkage, and Disequilibrium 91</li> </ul>		Microsatellite Loci 62
The Hardy-Weinberg Principle 69 3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78 3.2 Heterozygosity and Homozygosity 79 3.3 Deviations from Hardy-Weinberg Expectations 81 3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	2.13	Insertion/Deletion Variation 64
The Hardy-Weinberg Principle 69  3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	2.14	Why Is There So Much Genetic Variation? 65
3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78 3.2 Heterozygosity and Homozygosity 79 3.3 Deviations from Hardy-Weinberg Expectations 81 3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	Summa	ary 66 • Problems 67
3.1 The Hardy-Weinberg Principle 70 Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78 3.2 Heterozygosity and Homozygosity 79 3.3 Deviations from Hardy-Weinberg Expectations 81 3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		
Random Union of Gametes 70 Random Mating 71 Testing Population Samples for Hardy-Weinberg Conditions 73 Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78 3.2 Heterozygosity and Homozygosity 79 3.3 Deviations from Hardy-Weinberg Expectations 81 3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	The l	Hardy-Weinberg Principle 69
Random Mating 71  Testing Population Samples for Hardy-Weinberg Conditions 73  Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77  Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84  Different Allele Frequencies in Males and Females 84  Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	3.1	The Hardy-Weinberg Principle 70
Testing Population Samples for Hardy-Weinberg Conditions 73  Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77  Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84  Different Allele Frequencies in Males and Females 84  Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Random Union of Gametes 70
Using the Hardy-Weinberg Principle to Estimate Frequencies of Reces Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Random Mating 71
Alleles 77 Multiple Alleles 78  3.2 Heterozygosity and Homozygosity 79  3.3 Deviations from Hardy-Weinberg Expectations 81  3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Testing Population Samples for Hardy-Weinberg Conditions 73
<ul> <li>3.2 Heterozygosity and Homozygosity 79</li> <li>3.3 Deviations from Hardy-Weinberg Expectations 81</li> <li>3.4 Sex and the Hardy-Weinberg Principle 84         Different Allele Frequencies in Males and Females 84         Sex-Linked Loci 85 </li> <li>Summary 87 • Problems 88</li> </ul> Recombination, Linkage, and Disequilibrium 91		Using the Hardy-Weinberg Principle to Estimate Frequencies of Recessive Alleles 77
3.3 Deviations from Hardy-Weinberg Expectations 81 3.4 Sex and the Hardy-Weinberg Principle 84 Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Multiple Alleles 78
3.4 Sex and the Hardy-Weinberg Principle 84  Different Allele Frequencies in Males and Females 84  Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	3.2	Heterozygosity and Homozygosity 79
Different Allele Frequencies in Males and Females 84 Sex-Linked Loci 85 Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	3.3	Deviations from Hardy-Weinberg Expectations 81
Sex-Linked Loci 85  Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91	3.4	Sex and the Hardy-Weinberg Principle 84
Summary 87 • Problems 88  Recombination, Linkage, and Disequilibrium 91		Different Allele Frequencies in Males and Females 84
Recombination, Linkage, and Disequilibrium 91		Sex-Linked Loci 85
•	Summa	ary 87 • Problems 88
•		
4.1 Recombination and Linkage 91	Reco	ombination, Linkage, and Disequilibrium 91
	4.1	Recombination and Linkage 91
4.2 Gametic and Linkage Disequilibrium 93	4.2	Gametic and Linkage Disequilibrium 93

Natural Selection and Gametic Disequilibrium 99 A Standardized Measure of Disequilibrium 100

DNA Fingerprinting and Individual Identification 104

Estimating D 102

4.3

2.10 DNA Sequence Variation 51

4.4	Mapping	Genes Associated	with	Human	Diseases	108
-----	---------	------------------	------	-------	----------	-----

The Binomial Distribution 108

Conditional and Total Probability 109

Two-Point Mapping of Disease-Associated Genes 110

Multipoint Mapping of Disease Genes 115

Significance Thresholds and False Positives 116

Problems and Cautions with LOD Score Analysis 117

Useful Kinds of Molecular Markers and Informative Families 117

Mapping by Population Associations 119

## 4.5 Diagnosing Human Genetic Diseases 120

Direct Diagnosis 120

Indirect Diagnosis 122

Summary 125 • Problems 127

## CHAPTER 5 Natural Selection I: Basic Models 129

## **5.1** Fitness 130

Population Fitness 132

Components of Fitness 133

## 5.2 A Diploid Model of Natural Selection at a Single Locus 134

The Basic Model 135

Directional Selection 139

Heterozygote Superiority 140

Heterozygote Inferiority 142

Summary of the Model 143

How Realistic Are the Assumptions? 144

## 5.3 Two Classic Examples of Natural Selection 146

Industrial Melanism 146

Sickle Cell Anemia 149

## 5.4 Evolution of Pesticide and Antibiotic Resistance 152

Insecticide Resistance 152

Warfarin Resistance in Rats 155

Antibiotic Resistance in Bacteria 157

## 5.5 Selection Against Human Genetic Diseases and Rare

Recessive Alleles 159

## 5.6 Selection on Allozyme Loci 160

5.7 Balancing Selection 163

5.8 Alternative Formulations of the Viability Selection Model 163

Selection Coefficients 164

Dominance Formulation 164

Marginal Fitnesses 165

5.9 Evolution of Population Fitness 166

The Fundamental Theorem of Natural Selection 168

Adaptive Landscapes 169

5.10 Estimating Fitnesses 171

Estimating Components of Fitness 172

Estimating Fitnesses from Allele Frequency Changes 175

Summary 178 • Problems 179

## CHAPTER 6 Mutation 183

6.1 Kinds of Mutations 183

Chromosomal Mutations 185

Point Mutations 187

Insertions and Deletions 187

Gene Duplications 188

6.2 Molecular Models of Mutation 190

Recurrent Mutation 190

The Infinite Alleles Model 191

The Stepwise Mutation Model 191

The Infinite Sites Model 192

- 6.3 Mutation Rates 193
- 6.4 Fitness Effects of Mutations 196

Deleterious Mutations 196

Neutral and Nearly Neutral Mutations 197

Advantageous Mutations 200

The Magnitude of Mutational Effects 202

Heterozygous Effects of Mutations 203

6.5 Mutation-Selection Equilibrium 204

Estimating Mutation Rates 206

Heterozygous Effects of Lethal Mutations 207

6.6 Genomic Mutation Rates and Mutational Load 207

Mutational Load 208

Muller's Ratchet 210

Estimates of Genomic Mutation Rates 211

6.7	Fate	of a	Ne	w Mut	atio	n 215
Summar	у 2	17	•	Problen	1.5	219

CHAPTER 7	Genetic	Drift	221
CHAPIER /	степецс	Driit	221

7.1	The Direction an	d Magnitude of	Genetic Drift	224

7.2 Genetic Drift Reduces Genetic Variation Within a Population 225
 Identity by State and Identity by Descent 226
 Reduction of Heterozygosity 227
 Loss of Alleles 230

7.3 Genetic Drift Causes Populations to Diverge 231

7.4 Effective Population Size 236

No Self-Fertilization 237

Uneven Sex Ratio 237

Variation in Population Size 238

Variation in Family Size 238

X-Linked, Y-Linked, and Mitochondrial DNA 238

7.5 Genetic Drift in Natural Populations 239

7.6 Founder Effects and Population Bottlenecks 243

Founder Effect Reduces Genetic Variation 243

Founder Effect Changes Allele Frequencies 245

Population Bottlenecks 246

Recovery from a Bottleneck or Founder Event 247

- 7.7 Genetic Drift and Mutation 248
- 7.8 Genetic Drift and Natural Selection 251Probability of Fixation for a New Mutation 254
- 7.9 Genetic Drift, Population Dynamics, and Extinction 259
   Stochastic Population Dynamics 260
   Minimum Viable Population Size 262
- 7.10 How Important Is Genetic Drift in Nature? 264

Summary 265 • Problems 266

## CHAPTER 8 Inbreeding and Nonrandom Mating 269

8.1 Inbreeding 269

Consanguinity and Inbreeding 270

The Inbreeding Coefficient 273

Effect of Inbreeding on Heterozygosity 274

	_
**	Camba
x	Conte

Effect of Inbreeding on Genotype and Allele Frequencies 276

Inbreeding in Finite Populations 278

Self-Fertilization 281

Repeated Inbreeding and Systems of Mating 285

Inbreeding Depression 286

Inbreeding and Purging of Deleterious Recessive Alleles 293

Inbreeding and Gametic Disequilibrium 294

Outbreeding, Hybrid Vigor, and Outbreeding Depression 295

#### 8.2 Assortative Mating 296

Effect of Assortative Mating on Genotype and Allele Frequencies 297

Assortative Mating and Population Fitness 300

Assortative Mating and Speciation 301

Quantification of Assortative Mating 304

#### 8.3 Disassortative Mating 306

Disassortative Mating with Dominance 307

Self-Incompatibility Systems 309

Summary 312 • Problems 313

#### Population Subdivision and Gene Flow 315 CHAPTER 9

- 9.1 The Wahlund Effect 315
- 9.2 Population Subdivision and F Coefficients 317

F Coefficients with Multiple Alleles 321

F Coefficients for Multiple Loci 322

Alternative Interpretations of  $F_{ST}$  322

Estimating  $F_{ST}$  from Sample Data 326

Statistical Significance of Subdivision 327

#### 9.3 Gene Flow 330

The Continent-Island Model 331

The Island Model 334

Stepping Stone Models and Isolation by Distance 334

#### 9.4 Gene Flow and Differentiation 337

Gene Flow and Natural Selection 341

#### 9.5 Estimating Levels of Gene Flow 343

Direct Estimates of Gene Flow 343

Indirect Estimates of Gene Flow 344

Estimating Gene Flow from Allozyme Data 345

Estimating Gene Flow from Microsatellite Loci 347

Assignment Tests for Microsatellite Loci 349

Estimating Gene Flow from RFLP Data 351

Estimating Gene Flow from DNA Sequence Data 353

Analysis of Variance Approach 354

- 9.6 A Case Study: Lake Erie Water Snakes 359
- 9.7 Cautions and Prospects 363

Summary 365 • Problems 366

## CHAPTER 10 Molecular Population Genetics 369

10.1 Introduction to the Neutral Theory 370

Basic Concepts 370

Apparent Constancy of Amino Acid Substitution Rates 373

High Levels of Allozyme Variation and Segregational Load 375

10.2 Predictions of the Neutral Theory 376

How Weak Must Selection Be for an Allele to Be Neutral? 376

The Molecular Clock 378

The Generation Time Effect 381

Heterozygosity and Population Size 382

Substitution Rates and Selective Constraints 383

Geographic and Environmental Correlations 386

10.3 The Nearly Neutral Theory 388

Codon Bias 394

10.4 Detecting Natural Selection 397

Kinds of Natural Selection 397

Replacement Versus Silent Substitution Rates 398

Selection for Diversity 400

The Expected Distribution of Allele Frequencies 401

The Ewens-Watterson Test 402

Tajima's Test 405

The HKA Test 407

The McDonald-Kreitman Test 409

Recombination, Hitchhiking, and Background Selection 410

Demographic Considerations 413

Cautions and Prospects 414

Summary 415 • Problems 417

CHAPTER 11	Molecular	<b>Evolution</b>	and	Phylogenetics	419
------------	-----------	------------------	-----	---------------	-----

## 11.1 Amino Acid and Nucleotide Substitutions 420

Amino Acid Substitutions 420

Nucleotide Substitutions: Noncoding Sequences 422

Nucleotide Substitutions: Coding Sequences 425

## 11.2 Molecular Phylogenetics 430

Basic Concepts 431

Gene Trees Versus Species Trees 433

Sequence Alignment 434

How Many Trees? 436

Tree Searching Strategies 437

Tree Construction: Distance Methods Versus Character State Methods 439

Distance Methods 440

Character State Methods: Parsimony 441

Character State Methods: Maximum Likelihood 444

Character State Methods: Bayesian Methods 445

Assessing Confidence and Reliability of Gene Trees 447

Examples 448

### 11.3 Gene Genealogies and Coalescence 455

Introduction to Coalescence 455

Mutation and Coalescence 459

Changing Population Size 460

Natural Selection 461

Population Subdivision 461

Recombination 462

An Example 463

The Importance of Coalescent Theory 464

Summary 465 • Problems 466

# CHAPTER 12 Natural Selection II: Balancing Selection and Advanced Models 469

- 12.1 Natural Selection with Multiple Alleles at a Locus 470
- 12.2 Two-Locus Models of Selection 476

Review of Two-Locus Models Without Selection 476

A General Two-Locus Model of Viability Selection 477

Additive Viability Model 479

	Multiplicative Viability Model 479					
	Symmetric Viability Models 480					
	General Two-Locus Models 481					
	How Common Is Gene Interaction? 483					
	Evolution of Recombination Rates 485					
	Beyond Two Loci 487					
12.3	Selection in Spatially Varying Environments 487					
	The Levene Model 488					
	Variations on the Levene Model 489					
	Spatially Varying Selection in Natural Populations 492					
12.4	Selection in Temporally Varying Environments 493					
	Temporal Variation Among Generations 494					
	Temporal Variation Within Generations 496					
12.5	Selection in Randomly Varying Environments 498					
12.6	Frequency Dependent Selection 500					
	A Model of Frequency Dependent Selection 500					
	Frequency Dependent Selection in Natural Populations 501					
12.7	Antagonistic Pleiotropy 507					
12.8	Opposing Selection in Males and Females 509					
12.9	Sexual Selection 513					
	Competition Among Males for Mates 514					
	Female Choice 516					
	Reversal of Sex Roles 518					
12.10	A Case Study: Soay Sheep 518					
Summ	ary 520 • Problems 522					
Quai	ntitative Genetics 525					
13.1	Genetic and Environmental Effects on Quantitative Traits 526					
13.2	The Genetics of Quantitative Characters 533					
	Decomposition of the Phenotype 534					
	Variance Components for Quantitative Traits 538					
	Heritability 539					
	Covariance Among Relatives 540					
13.3	Artificial Selection on a Quantitative Trait 544					
	Continued Selection on a Quantitative Trait: Short-Term Response	548				
	Continued Selection on a Quantitative Trait: Long-Term Response	549				

CHAPTER 13

	Correlated Response to Selection 551
	Decrease in Fitness Associated with Artificial Selection 553
13.4	Natural Selection on Quantitative Traits 553
	Kinds of Natural Selection 554
	Antagonistic Pleiotropy 557
	Natural Selection on Correlated Traits 558
	The Strength of Natural Selection 562
13.5	Quantitative Trait Loci 564
	How Many Loci Affect a Quantitative Trait? 565
	Mapping Quantitative Trait Loci 565
	Quantitative Trait Loci in Humans and Natural Populations 571
13.6	Evolutionary Quantitative Genetics 572
	The Effect of Natural Selection on Genetic Variation 572
	Heritabilities in Natural Populations 574
	Heritability Versus Additive Genetic Variance 576
	Mutation Rates for Quantitative Characters 578
	Effects of Mutation and Genetic Drift on Genetic Variance 579
	Joint Effects of Mutation and Natural Selection on Genetic Variance 581

How Important Are Dominance, Linkage, Epistasis, and Pleiotropy? 584

What Maintains Genetic Variation for Quantitative Traits? 587

Summary 588 • Problems 589

## APPENDIX A Probability and Random Variables 593

## A.1 Populations and Samples 593

## A.2 Probability 594

Law of Addition 595

Conditional Probability 596

Total Probability 597

Independence 597

Law of Multiplication 598

Bayes'Theorem 599

## A.3 Discrete Random Variables 599

Expected Value of a Discrete Random Variable 600

Variance of a Discrete Random Variable 601

The Binomial Distribution 601

The Poisson Distribution 602

Geometric Distribution 602

	A.4	Continuous Random Variables 603	
		Expected Value and Variance of a Continuous Random Variable 604	
		The Exponential Distribution 605	
		The Normal Distribution 606	
		The Standard Normal Distribution 606	
	A.5	Functions of Random Variables 606	
		Rules for Expected Values 606	
		Rules for Variances 607	
	A.6	Pairs of Random Variables 607	
		Covariance 608	
		Correlation 608	
		Linear Regression 609	
	A.7	Estimates of Population Parameters 610
