# Handbook of Explosion Prevention and Protection

# Contents

Preface XV

List of Contributors XVII

<b>1</b>	<b>Explosion Processes</b>	<b>1</b>
1.1	Introduction	1
1.1.1	Quantitative Description of Combustion Processes	2
1.1.2	Ignition	5
1.1.3	Thermal Ignition	5
1.1.4	Chain Explosion – Chain Reactions	10
1.1.5	Ignition Temperature	12
1.1.6	Ignition Delay Times	13
1.2	Propagation of Combustion Processes in the Gas Phase	14
1.2.1	Flames in Premixed Gases	15
1.2.2	Flame Temperature	22
1.2.3	Reaction Zone	23
1.2.4	Interaction of Flames with a Wall	25
1.2.5	Description of Detonations and Shock Waves	26
1.2.6	Limits of Detonability	34
1.2.7	Spherical Detonations	36
1.3	Instationary Flame Propagation: Explosions	38
1.3.1	Flames in Tubes: Open Systems	38
1.3.2	Flames in Closed Systems	44
1.3.3	Influence of Obstacles in the Flame Path	45
1.3.4	Direct Transition to Detonation	53
1.4	Explosions in the Open	55
1.4.1	Combustion of a Gas Cloud: An Idealized Model	56
1.4.2	Effect of Obstacles: Analysis of Accidents	57
<b>2</b>	<b>Ignition Processes</b>	<b>61</b>
2.1	Electrical Ignition Sources	61
2.1.1	Introduction	61
2.1.2	Ignition Process in Explosible Atmospheres	61

2.1.3	Minimum Ignition Energy of Flammable Gases and Vapors	65
2.1.3.1	The Concept of Minimum Ignition Energy	65
2.1.3.2	Determination Methods	65
2.1.3.3	Minimum Ignition Energies	68
2.1.3.4	Peculiarities of Hardly Flammable Vapors	71
2.1.3.5	Determination of the Minimum Ignition Energy by Laser Breakthrough	72
2.1.3.6	Energy Turnover in Sparks	73
2.1.4	Minimum Ignition Energy of Flammable Dusts	76
2.1.4.1	Determination Methods	76
2.1.4.2	Influence of an Inductance in the Discharge Circuit	80
2.1.5	Sparks on Opening and Closing Electrical Circuits	81
2.1.5.1	Introduction	81
2.1.5.2	Spark Test Apparatus	82
2.1.5.3	Limiting Values for Ignition in Capacitive, Inductive, and Ohmic Circuits	83
2.1.5.4	Explosion Prevention and Protection for Electrical Equipment	85
2.1.5.5	Compensating Electric Currents (Stray Currents) in Plants	87
2.1.6	Unintended Reception of High-Frequency Radiation	89
2.1.6.1	Structures in Plants Capable of Reception	89
2.1.6.2	Limiting Values for Ignition	91
2.1.6.3	Assessment of the Ignition Hazard and Prevention Measures	93
2.2	Ignition Hazards due to Static Electricity*	96
2.2.1	Fundamentals	96
2.2.2	Systematic Approach for Judging Ignition Hazards due to Electrostatic Charging	97
2.2.3	Discharges in Gases	100
2.2.4	Different Types of Discharge	102
2.2.4.1	Spark Discharges	103
2.2.4.2	Corona Discharge	107
2.2.4.3	Brush Discharges	108
2.2.4.4	Propagating Brush Discharges	113
2.2.4.5	Discharges from Conical Piles of Bulk Goods	118
2.2.4.6	Lightninglike Discharges	121
2.2.5	Charging of Solid Materials	122
2.2.6	Charging of Liquids	123
2.2.6.1	Charge Relaxation in Nonpolar Liquids	123
2.2.6.2	Ignition Hazards during Filling of Tanks	127
2.2.6.3	Stirring of Two-Phase Mixtures	136
2.2.6.4	Spraying of Liquids, Tank Cleaning	137
2.2.7	Charging during Handling of Gases	141
2.2.7.1	General	141
2.2.7.2	Fire Extinguishers	142
2.2.7.3	Inerting	142
2.2.7.4	Tank Cleaning with Steam	142

2.2.7.5	Unintended Release of Compressed Gases	142
2.2.8	Electrostatic Spraying Procedures	143
2.2.8.1	Spray Coating with Liquid Paint, Powders, or Flocks	143
2.2.8.2	Hand-Held Spraying Devices for Flammable Spraying Material	143
2.2.8.3	Stationary Electrostatic Spraying Plants for Inflammable Spray Materials	145
2.2.8.4	Electrostatic Devices for Spraying Nonflammable Materials	146
2.2.9	Charging of Dusts and Bulk Goods	147
2.2.9.1	The Charging Process	147
2.2.9.2	Flammable Dusts and Bulk Goods in the Absence of Flammable Gases and Vapors	148
2.2.9.3	Flammable Dusts and Bulk Goods together with Inflammable Gases and Vapors	151
2.2.9.4	Special Dusts and Bulk Goods	152
2.3	Ignition by Hot Surfaces	153
2.3.1	Introduction	153
2.3.2	Ignition Process on Hot Surfaces	153
2.3.3	Important Parameters	159
2.3.3.1	Type of Fuel and Explosive Mixture	159
2.3.3.2	Surface Geometry and Flow Pattern	165
2.3.3.3	Material of the Hot Surface	169
2.3.3.4	Pressure	170
2.3.4	Standards for Ignition Temperature Determinations, Some Safety Considerations	173
2.4	Mechanically Generated Sparks	178
2.4.1	Introduction	178
2.4.1.1	Impact Sparks	180
2.4.1.2	Grinding Sparks	181
2.4.2	Ignition Mechanisms	182
2.4.2.1	Particle Size and Shape	182
2.4.2.2	Particle Structure	184
2.4.2.3	Caloric Parameters	186
2.4.3	Ignition Capability, Ignitability, and Ignition Effectiveness	191
2.4.4	Ignition Experiments	194
2.4.5	Final Remarks	199
2.5	Adiabatic Compression – Shock Waves	200
2.5.1	Compression	200
2.5.2	Compression Machines	202
2.5.3	Reactions	203
2.5.3.1	Two-Stage Ignition	203
2.5.3.2	Cool Flames and Two-Stage Ignition	210
2.5.3.3	Low-Temperature Hydrocarbon Oxidation	211
2.5.4	Shock Waves	213
2.5.4.1	Ignition at Higher Temperatures	214
2.6.	Absorption of Optical Radiation	220

2.6.1	Introduction	220
2.6.2	Ignition Mechanisms	221
2.6.2.1	Resonant Absorption of Radiation in the Explosive Mixture	221
2.6.2.2	Ignition due to Plasma Formation under Focused Laser Radiation (Breakdown)	222
2.6.2.3	Absorption of Radiation by a Solid	223
2.6.3	Present State of Directives and Standards	226
2.7	Self-Ignition of Solid Materials (Including Dusts)	227
2.7.1	Fundamentals	227
2.7.2	The Steady-State Theory of Thermal Explosions	228
2.7.3	The Nonsteady-State Computation of Temperature Fields	234
2.7.4	Special Case: Adiabatic Induction Period	240
2.7.5	Experimental Practice	244
2.7.6	Influencing Parameters	248
2.7.7	SIT and Technical Regulations	251
2.7.8	Conclusions and Outlook	254
2.8	Chemical Reactions	256
2.8.1	One-Component Systems	257
2.8.1.1	Decomposition	257
2.8.1.2	Polymerization	259
2.8.1.3	Regulations for Usage and Transport	260
2.8.2	Multicomponent Systems	261
2.8.2.1	Oxidation with Air	262
2.8.2.2	Strong Oxidants	263
2.8.2.3	Calcium Carbide and Acetylene	265
2.8.2.4	Metal Phosphides and Phosphine	266
2.8.2.5	Pyrite (Iron Disulfide)	268
2.8.2.6	Direct Reduced Iron (DRI)	269
2.8.2.7	Regulations for Handling and Transport	270
<b>3</b>	<b>Properties of Reactive Gases and Vapours (Safety Characteristics)</b>	<b>271</b>
3.1	Safety Characteristics of Gases and Vapors	271
3.1.1	Introduction	271
3.1.1.1	Determination and Use of Safety Characteristics	271
3.1.1.2	Stating Numerical Values of SCs	272
3.1.1.3	Calculation and Estimation of SCs	272
3.1.1.4	Use of SCs	273
3.1.2	Classification of SCs	273
3.1.3	Tables and Data Bases for SCs	274
3.1.4	SCs in Regulations and Standards	275
3.1.5	SCs for Characterizing the Explosibility of Substances (Mixtures of Substances)	275
3.1.5.1	Explosion Limits	276
3.1.5.2	Further Characteristics of Explosion Regions	282
3.1.5.3	Temperature and Pressure Limits for Instability	287

3.1.5.4	Explosion Points	293
3.1.5.4	Flash Point	294
3.1.6	SCs for Assessing the Ignitability of Substances (Mixtures)	297
3.1.6.1	Minimum Ignition Energy, Minimum Ignition Current, Minimum Ignition Current Ratio	297
3.1.6.2	Autoignition Temperature (AIT)	301
3.1.7	SCs for the Assessment of the Propagation of the Reaction	304
3.1.7.1	Detonation Limits	304
3.1.7.2	Propagation Velocity of Deflagrations ("Flame Velocity")	307
3.1.7.3	Maximum Experimental Safe Gap	311
3.1.8	SCs for Assessing the Effects of an Explosion	314
3.1.8.1	Explosion Pressure and Maximum Explosion Pressure	314
3.1.8.2	Rate of Pressure Rise and Maximum Rate of Pressure Rise, "K <sub>G</sub> value"	319
3.1.8.3	Pressure Effect of Detonations	321
3.1.9	Other Chemical and Physical Substance Characteristics Which are Important for Assessments in Safety Technology	322
3.2	Safety Characteristics and Properties of Gases and Vapors: a Physicochemical Approach	323
3.2.1	Introduction	323
3.2.2	Summary of Fundamentals	324
3.2.2.1	Physical Properties of Gases	324
3.2.2.2	Phase Equilibria of Pure Substances and Mixtures	325
3.2.2.3	Chemical Equilibrium	327
3.2.2.4	Chemical Kinetics	328
3.2.2.5	Transport Processes	331
3.2.2.6	Combustion: List of References	333
3.2.3	Flames: Reactions at High Temperature	334
3.2.3.1	Introduction	334
3.2.3.2	Reaction Mechanism and Flame Velocity	336
3.2.3.3	Inhibitors/Promoters	343
3.2.3.4	Limits of Flammability	345
3.2.3.5	Flame Velocity and Ignition, Minimum Ignition Energy, Quenching Distance	351
3.2.4	Oxidation at Low Temperature	354
3.2.4.1	Some Experimental Findings	354
3.2.4.2	Chain Explosion	359
3.2.4.3	Thermal Explosion	370
<b>4</b>	<b>Properties of Combustible Dusts (Safety Characteristics)</b>	<b>379</b>
4.1	Introduction	379
4.2	Dust Deposits (Burning Characteristics)	381
4.2.1	Combustion Behaviour	381
4.2.2	Minimum Ignition Temperature of a Dust Layer on a Hot Surface (MIT <sub>layer</sub> )	382

4.2.3	Self-Ignition Behavior of Dust Piles	384
4.2.4	Capability to Deflagrate	387
4.2.5	Impact Sensitivity	388
4.2.6	Characteristics of Pyrolysis Gases Generated by Dust Piles under Thermal Stress	389
4.3	Suspended Dusts (Explosion Characteristics)	391
4.3.1	Maximum Explosion Pressure and Maximum Rate of Pressure Rise of Dust Explosions	392
4.3.1.1	Influence of Different Initial Conditions	397
4.3.1.2	Problems with Transfer to Practical Plant Conditions	400
4.3.1.3	Laminar Burning Velocity	402
4.3.2	Lower Explosion Limit	405
4.3.3	Limiting Oxygen Concentration	409
4.3.4	Minimum Ignition Temperature of the Dust Cloud in a Hot Furnace (MIT <sub>cloud</sub> )	411
4.3.5	Minimum Ignition Energy of a Dust Cloud	415
<b>5</b>	<b>Properties of Flammable Mists and Foams</b>	<b>419</b>
5.1	Flammable Mists and Spray Jets	419
5.1.1	Introduction	419
5.1.1.1	Definitions	419
5.1.1.2	Hazards in Practical Applications	421
5.1.2	Generation of Mists and Spray Jets	421
5.1.2.1	Special Physical Features	421
5.1.2.2	Methods of Generation in Practice	422
5.1.3	Characterization of Mists and Sprays	423
5.1.3.1	Degree of Dispersion	423
5.1.3.2	Concentration	425
5.1.3.3	Relative Motion of the Phases	426
5.1.4	Combustion in Mists and Spray Jets	426
5.1.4.1	Fundamentals	426
5.1.4.2	Lower Explosion Limit	429
5.1.4.3	Flame Propagation Velocities	432
5.1.4.4	Detonation Processes	433
5.1.4.5	Effectiveness of Ignition Sources	434
5.1.4.6	Maximum Explosion Pressure	439
5.1.4.7	Rate of Explosion Pressure Rise	441
5.1.4.8	Fire Hazard Classification	442
5.1.4.9	Maximum Experimental Safe Gap	442
5.1.5	Prevention and Protection Measures	443
5.1.5.1	Avoidance of Explosible Droplet Suspensions	443
5.1.5.2	Avoidance of Ignition Sources	443
5.1.5.3	Mitigation of the Effects of Fires and Explosions	444
5.2	Heterogeneous Systems Consisting of Organic Liquids and Oxygen	445
5.2.1	Introduction	445

5.2.2	Wick Detonations	447
5.2.3	Bubble Explosions	450
5.2.3.1	Bubble Explosions Ignited by Shock Waves or Detonation Waves	450
5.2.3.2	Bubble Explosions Ignited by an Incandescent Wire	451
5.2.4	Foam Detonations	453
5.2.4.1	Detonations of Model Foams	455
5.2.4.2	Detonation Ranges of Model Foams	455
5.2.4.3	Detonation Velocity of Model Foams	456
5.2.4.4	Run-up Distances of Detonations in Model Foams	460
5.2.4.5	Detonation Pressures in Model Foams	460
5.2.4.6	Semi-Empirical Model of Foam Detonations	460
5.2.4.7	Cyclohexane Foams as Examples of Real Foams	461
5.2.5	Surface Detonations	464
5.2.5.1	One-Dimensional Surface Detonations	464
5.2.5.2	Two-Dimensional Surface Detonations	471
5.2.6	Final Considerations	479
5.2.6.1	Safety Concept	479
5.2.6.2	Safety Characteristics	480
<b>6</b>	<b>Measures of Explosion Protection and Prevention</b>	<b>481</b>
6.1	Course of the Explosion Pressure in Closed Vessels and Their Design	481
6.1.1	Deflagrations in Closed Spaces	482
6.1.1.1	Pressure–Time Course	482
6.1.1.2	Maximum Temporal Pressure Increase of Deflagrations	485
6.1.1.3	Maximum Pressure of Deflagrations	486
6.1.2	Detonations	489
6.1.3	Wall Loading due to Gas Explosions	491
6.2	Explosion Venting	493
6.2.1	Introduction	493
6.2.1.1	Introductory Remark	493
6.2.1.2	Principle of the Protection Measure	494
6.2.1.3	Importance of the Protection Measure	495
6.2.2	Methods for Determining the Necessary Vent Area	497
6.2.2.1	Introduction	497
6.2.2.2	Single-Step Methods	497
6.2.2.3	Principal Assumptions and Preconditions for the One-Step Methods	500
6.2.2.4	Disadvantages of the Single-Step Methods	501
6.2.2.5	Methods Based on Models	502
6.2.3	Physical Background	503
6.2.3.1	Course of Pressure with Time	503
6.2.3.2	Quantities Influencing $p_{red}$ and $(dp/dt)_{red}$	508
6.2.3.3	Effects in the Surrounding Region	517
6.2.3.4	Recoil	519

- 6.2.3.5 Pipes 519
- 6.2.4 Types of Venting Devices 520
  - 6.2.4.1 Introduction 520
  - 6.2.4.2 Devices with Nonreusable Elements 521
  - 6.2.4.3 Devices with Reusable Elements 524
  - 6.2.4.4 Special Devices 525
- 6.2.5 Regulations 527
  - 6.2.5.1 VDI Guideline 3673 527
  - 6.2.5.2 NFPA Guideline 68 527
  - 6.2.5.3 AFNOR Standard U 54-540 528
  - 6.2.5.4 European Pre-Standard (prEN 14491) on the Dimensioning of Venting Systems for Dust Explosions 528
  - 6.2.5.5 Draft of a European Standard on the Requirements for the Design and Construction of Venting Devices 529
- 6.2.6 Future Developments 529
  - 6.2.6.1 Enclosures with Thin Walls 529
  - 6.2.6.2 Venting of gas explosions 529
  - 6.2.6.3 Venting in the Presence of Obstacles to Flow 530
  - 6.2.6.4 Venting of Connected Vessels 530
  - 6.2.6.5 Final Remark 530
- 6.3 Explosion Suppression 531
  - 6.3.1 Introduction 531
  - 6.3.2 Definition 531
  - 6.3.3 Description of the Suppression System 532
    - 6.3.3.1 Detectors/Sensors 532
    - 6.3.3.2 HRD Suppressors 536
    - 6.3.3.3 Suppressants 541
    - 6.3.3.4 Control and Indicating Equipment (CIE) 544
  - 6.3.4 Theory of Explosion Suppression 545
  - 6.3.5 Design of Explosion Suppression Systems 546
    - 6.3.5.1 General 546
    - 6.3.5.2 Hazard Definition 547
    - 6.3.5.3 Design for Vessels with  $L/D < 2$  (Compact Vessels) 549
    - 6.3.5.4 Design for Vessels with  $2 \leq L/D \leq 10$  (Elongated Vessels) 550
    - 6.3.5.5 Computer-Aided Design 551
  - 6.3.6 Application Limits of Suppression Systems 552
  - 6.3.7 Example of Applications 553
  - 6.3.8 Final Consideration 557
- 6.4 Explosion Isolation 560
  - 6.4.1 Introduction 560
  - 6.4.2 Isolation Systems 561
    - 6.4.2.1 Rotary Air Lock 561
    - 6.4.2.2 Extinguishing Barrier 562
    - 6.4.2.3 Explosion Protection Sliding Valve 564
    - 6.4.2.4 Explosion Protection Float Valve 565

- 6.4.2.5 Diverter 567
- 6.4.2.6 Double-Slide System 569
- 6.4.2.7 Product Layer 569
- 6.4.2.8 Screw Conveyor as a Choke 570
- 6.4.2.9 Extinguishing Barriers in Combination with a Diverter 571
- 6.4.3 Design Basics 571
  - 6.4.3.1 Base Parameters 571
  - 6.4.3.2 Choice of Detector/Sensor 572
  - 6.4.3.3 Installation Distance 574
  - 6.4.3.4 Quantity of Suppressant  $M_S$  for Extinguishing Barriers 576
  - 6.4.3.5 Diverter 578
- 6.4.4 Examples of Applications 578
- 6.4.5 Final Remark 582
- 6.5 Flame Arresters 583
  - 6.5.1 Introduction 583
  - 6.5.2 Fundamental Principles 584
    - 6.5.2.1 Flame Quenching in Narrow Gaps 584
    - 6.5.2.2 Arresting of Flames by Hydraulic Arresters 586
    - 6.5.2.3 Arresting of Flames by an Opposed High-Velocity Flow 587
    - 6.5.2.4 Preventing Flame Transmission by Liquid Barriers 588
  - 6.5.3 Specific Types of Loads and Classifications 588
    - 6.5.3.1 Deflagrations 588
    - 6.5.3.2 Detonations 589
    - 6.5.3.3 Stabilized Burning 592
  - 6.5.4 Examples for Design and Construction of the Main Types of Flame Arresters 592
    - 6.5.4.1 Static Flame Arresters 592
    - 6.5.4.2 Flame Arresters with Wet Arresting Elements 596
    - 6.5.4.3 Flame Arresters Using a High-Velocity Flow 598
  - 6.5.5 Process Engineering Equipment 599
    - 6.5.5.1 Detection of Stabilized Flames 599
    - 6.5.5.2 Devices Resistant to Endurance Burning 600
    - 6.5.5.3 Measuring and Control Equipment for Hydraulic Arresters 600
    - 6.5.5.4 Measuring Equipment at Flow-Controlled Apertures for Burner Injection 600
    - 6.5.5.5 Measures to Ensure Functionality 601
  - 6.5.6 Tests 602
    - 6.5.6.1 Mechanical Stability 602
    - 6.5.6.2 Tightness 602
    - 6.5.6.3 Pressure Drop of the Flowing Medium 602
    - 6.5.6.4 Flame-Arresting Effect 603
  - 6.5.7 Conditions of Use 605
    - 6.5.7.1 Explosion Groups of Gases and Vapors 606
    - 6.5.7.2 Pressure and Temperature of the Mixtures 606
    - 6.5.7.3 Configuration of Pipework 606

6.5.7.4	Special Problems of Safe Operation	608
6.5.8	Examples of Application in Practice	608
6.5.8.1	Safeguarding of a Tank for Flammable Liquids	608
6.5.8.2	Safeguarding of a Thermal Postcombustion Plant	609
<b>7</b>	<b>Fundamentals of Understanding and Judging Explosion Risks</b>	<b>611</b>
7.1	Basic Terms in Safety Engineering	612
7.2	Explosions Risks	617
7.2.1	The Principle of Probabilities	617
7.2.2	Primary Explosion Protection	619
7.2.2.1	General	619
7.2.2.2	Ventilation	621
7.2.2.3	Inertization of Explosive Mixtures	624
7.2.2.4	Gas Detectors	626
7.2.3	Secondary Explosion Protection	627
7.2.3.1	Fundamentals	627
7.2.3.2	Type and Extent of Explosion-Hazard Areas (Zones)	630
7.2.3.3	Protection against Ignition Hazards	632
7.2.4	Protection against Explosion Effects in the Explosion-Hazard Areas	634
7.2.5	Regulations on Explosion Protection in Explosion-Hazard Areas	636
7.2.6	Protection against Explosion Damages in Remote Areas	638
7.2.7	Procedures for Investigating and Describing Explosion Risks	638
<b>8</b>	<b>References</b>	<b>641</b>
<b>Index</b>		<b>689</b>
