VOLUME 2: SOLIDS AND STRUCTURES

Contributors to Volume 2	ix	3 Computation	150
Preface	xi	Notes	164
		References	164
1 Solids and Structures: Introduction and Survey	1	5 Computational Structural Dynamics	169
<i>René de Borst</i>		<i>Gregory M. Hulbert</i>	
1 Introduction	1	1 Introduction	169
2 Finite Element Methods for Elasticity with Error-controlled Discretization and Model Adaptivity	5	2 Formulation of Equations of Structural Dynamics	170
<i>Erwin Stein/Marcus Rüter</i>		3 Time Integration Algorithms	175
1 Introduction	5	4 Linear Structural Dynamics	181
2 Nonlinear and Linear Theory of Elasticity	7	5 Nonlinear Dynamics	184
3 Variational Problems and Their Finite Element Discretizations	16	6 Practical Considerations for Time Integration Algorithms	187
4 Error Estimation and Adaptivity in Linearized Elasticity	24	References	189
5 Coupled a Posteriori Model and Discretization Error Estimation	40	6 Computational Contact Mechanics	195
6 A Posteriori Error Estimation in Finite Elasticity	46	<i>P. Wriggers/G. Zavarise</i>	
7 Concluding Remarks	54	1 Introduction	195
References	55	2 General Overview	196
3 Models and Finite Elements for Thin-walled Structures	59	3 Continuum Description of Contact	198
<i>M. Bischoff/W. A. Wall/K.-U. Bletzinger/E. Ramm</i>		4 Contact Discretizations	206
1 Introduction	59	5 Solution Algorithms	214
2 Mathematical and Mechanical Foundations	63	6 Conclusions	221
3 Plates and Shells	68	References	221
4 Dimensional Reduction and Structural Models	70	7 Elastoplastic and Viscoplastic Deformations in Solids and Structures	227
5 Finite Element Formulation	107	<i>F. Armero</i>	
6 Concluding Remarks	128	1 Introduction	227
Acknowledgments	128	2 The Mechanical Problem	229
References	128	3 Infinitesimal Models of Elastoplasticity	232
Further Reading	133	4 Finite Deformation Elastoplasticity	239
Appendix	134	5 Integration Algorithms	244
4 Buckling	139	6 Primal Formulations of the Closest-point Projection Equations	250
<i>Eduard Riks</i>		7 Dual Formulations of the Closest-point Projection Equations	254
1 Introduction	139	8 Augmented Lagrangian Formulations	260
2 Basic Concepts	140	9 Concluding Remarks	263
		Acknowledgment	264
		References	264

8	Crystal Plasticity and Evolution of Polycrystalline Microstructure	267	6	Computational Homogenization	413
	<i>Christian Miehe/Jan Schotte</i>		7	Microgeometrical Manufacturing Idealizations	414
1	Introduction	267	8	Numerical Discretization	416
2	The Continuum Slip Theory of Crystal Plasticity	269	9	Overall Testing Process: Numerical Examples	417
3	Stress Update Algorithms in Single Crystal Plasticity	274	10	Increasing Sample Size	420
4	Variational Formulation of Elastic–Plastic Crystals	280	11	Hierarchical/Multiscale Interpretations	421
5	Representative Numerical Examples	283	12	Closing Comments and Future Directions	425
6	Conclusion	287		Notes	427
	References	287		References	427
				Further Reading	430
9	Shakedown and Safety Assessment	291	13	Computational Modelling of Damage and Failures in Composite Laminates	431
	<i>Nestor Zouain</i>			<i>J. N. Reddy/D. H. Robbins, Jr</i>	
1	Introduction	291	1	Objectives and Scope	431
2	Basic Notation	294	2	Introduction: the Multiscale Problem	432
3	Classical Static and Kinematic Shakedown Formulations	296	3	Laminate Theories and Models	433
4	Extremum Principles for Elastic Shakedown	299	4	Review of Literature on Damage and Failures	437
5	Discrete Models for Elastic Shakedown	301	5	Coupling Between the Microscale and the Mesoscale	440
6	Preventing Alternating Plasticity	304	6	Modeling of Progressive Damage in Composite Laminates	451
7	Preventing Simple Mechanisms of Incremental Collapse	304		Acknowledgments	458
8	Extensions Concerning Hardening and Temperature Effects	307		References	458
9	Other Extensions of Shakedown Theory	310		Further Reading	460
10	An Algorithm for Shakedown Analysis	312	14	Computational Modeling of Forming Processes	461
11	Numerical Procedures for Shakedown Analysis	316		<i>D. Perić/D. R. J. Owen</i>	
12	Applications	321	1	Introduction	461
13	Conclusions	330	2	Continuum Constitutive Modeling	462
	References	331	3	Implicit Finite Element Solution Strategy	469
10	Damage, Material Instabilities, and Failure	335	4	Contact–Friction Modeling	471
	<i>René de Borst</i>		5	Element Technology	476
1	Introduction	335	6	Refined Constitutive Models for Inelastic Solids at Finite Strains	481
2	Damage Mechanics	336	7	Thermomechanical Coupling	484
3	Material Instabilities and Mesh Sensitivity	341	8	Adaptive Strategies for Nonlinear Problems	485
4	Cohesive-Zone Models	349	9	Explicit Solution Strategies	491
5	Enhanced Continuum Descriptions	355	10	Thin Sheet Forming Operations	495
6	Discrete Failure Models	362	11	Bulk Forming Operations	496
7	Concluding Remarks	370	12	Metal Cutting Operations	502
	References	370	13	Concluding Remarks	506
11	Computational Fracture Mechanics	375		Acknowledgments	507
	<i>Anthony R. Ingraffea</i>			Note	507
1	Introduction	375		References	507
2	A Taxonomy of Approaches for Representation of Cracking Processes	376		Further Reading	510
3	Geometrical Representation Approaches	378	15	Computational Concrete Mechanics	513
4	Nongeometrical Representation Approaches	394		<i>Roman Lackner/Herbert A. Mang/Christian Pichler</i>	
5	Summary	400	1	Introduction	513
	Acknowledgments	402	2	Basic Ingredients of Multiscale Modeling	514
	References	402	3	Autogenous Shrinkage of Shotcrete in Hybrid Analysis of Tunnel Linings	516
12	Homogenization Methods and Multiscale Modeling	407	4	Tension Stiffening in Cooling Tower Analysis	529
	<i>Tarek I. Zohdi</i>		5	Concluding Remarks	538
1	Introduction	407		References	539
2	Fundamental Micro–Macro Concepts	409	16	Computational Geomechanics Including Consolidation	543
3	Testing Procedures	409		<i>John P. Carter/John C. Small</i>	
4	The Hill–Reuss–Voigt Bounds	411			
5	More Refined Micro–Macro Approximations	412			

1	Introduction	543	5	Basic Variable Sensitivity Computation	667
2	Characteristics of Geotechnical Problems	544	6	Perturbation Technique	668
3	Deterministic Geotechnical Analysis	544	7	Spectral Formulation	671
4	Methods of Numerical Analysis	545	8	Reliability Methods	676
5	Limit Analysis Using Finite Elements	549	9	Status and Outlook	680
6	Constitutive Models for Geomaterials	551		References	680
7	Soil-Structure Interaction	558			
8	Consolidation	561	21	Fluid-structure Interaction Problems	683
9	Stochastic Techniques	567		<i>Roger Ohayon</i>	
10	Concluding Remarks	569	1	Introduction	683
	Acknowledgments	569	2	Structural-acoustic Problem	684
	References	569	3	Structural-acoustic Equations	684
17	Multifield Problems	575	4	Incompressible Hydroelastic-sloshing Problem	689
	<i>B. A. Schrefler</i>		5	Hydroelastic-sloshing Equations	689
1	Introduction	575	6	Conclusion	692
2	Partitioned Solution Procedures	577		References	692
3	Soil Dynamics	589		Further Reading	693
4	Monolithic Solution Procedure	592	22	Acoustics	695
5	Conclusions	599		<i>Lonny L. Thompson/Peter M. Pinsky</i>	
	Acknowledgments	599	1	Introduction	695
	References	599	2	Acoustic Field Equations	696
	Further Reading	603	3	Time-harmonic Waves and the Helmholtz Equation	697
18	Computational Biomechanics of Soft Biological Tissue	605	4	Discretization Methods for the Helmholtz Equation	698
	<i>Gerhard A. Holzapfel</i>		5	The Exterior Problem in Unbounded Domains	702
1	Introduction	605	6	The DtN Nonreflecting Boundary Condition	703
2	Mechanics of the Arterial Wall	606	7	The Modified DtN Nonreflecting Boundary Condition	705
3	Mechanics of the Heart Wall	618	8	Infinite Elements	708
4	Mechanics of the Ligament	625	9	Perfectly Matched Layer (PML)	710
	Acknowledgments	629	10	Accelerated Multifrequency Solution Methods	710
	References	630	11	Parallel Iterative Solution Methods	711
19	Identification of Material Parameters for Constitutive Equations	637	12	Domain Decomposition Methods	712
	<i>R. Mahnken</i>		13	Direct Time-domain Methods for Acoustic Waves	713
1	Introduction	637	14	Conclusions	713
2	General Framework for Development of Constitutive Models	638	15	Related Chapters	714
3	Parameter Identification	640		Acknowledgments	714
4	Identification Methods	641		References	714
5	Optimization Methods	643	23	Boundary Integral Equation Methods for Elastic and Plastic Problems	719
6	Instabilities in Least-squares Problems	645		<i>Marc Bonnet</i>	
7	Stochastic Methods	646	1	Introduction	719
8	Parameter Identification for Uniform Small Strain Problems	647	2	Basic Integral Identities	720
9	Parameter Identification for Nonuniform Large Strain Problems	649	3	The Boundary Element Method in Elasticity: Collocation	723
10	Concluding Remarks	652	4	The Boundary Element Method in Elasticity: Symmetric Galerkin	727
	Acknowledgment	652	5	Fast Solution Techniques	729
	References	654	6	The Boundary Element Method for Fracture Mechanics	732
	Further Reading	655	7	Boundary-domain Integral Equations for Elastic-Plastic Problems	735
20	Stochastic Finite Element Methods	657	8	Shape Sensitivity Analysis	740
	<i>Miguel A. Gutiérrez/Steen Krenk</i>		9	FEM-BEM Coupling	744
1	Introduction	657	10	Related Chapters	745
2	Random Variables	658		References	745
3	Statically Determinate Problems	661	24	Boundary Element Methods for the Dynamic Analysis of Elastic, Viscoelastic, and Piezoelectric Solids	751
4	Representation of Random Fields	663		<i>L. Gaul/M. Kögl/F. Moser/M. Schanz</i>
