VOLUME 3: FLUIDS

Contributors to Volume 3	ix	Acknowledgments	123
		References	123
Preface	xi		
1 Fluids: Introduction and Survey	1	5 Vortex Methods	129
<i>Thomas J. R. Hughes</i>		<i>G. S. Winckelmans</i>	
2 Multiscale and Stabilized Methods	5	1 Introduction	129
<i>Thomas J. R. Hughes/Guglielmo Scovazzi/Leopoldo P. Franca</i>		2 Vortex Methods for 2D Unbounded Inviscid Flows	131
1 Introduction	5	3 Vortex Methods for 3D Unbounded Inviscid Flows	134
2 Dirichlet-to-Neumann Formulation	8	4 Viscous Flows	137
3 Variational Multiscale Method	11	5 Improvement of the Truncation Error	139
4 Space–Time Formulations	27	6 Particle Redistribution	140
5 Stabilized Methods for Advective–Diffusive Equations	32	7 Efficient Velocity Evaluation: Fast Multipole Methods	141
6 Turbulence	40	8 Efficient Velocity Evaluation: Vortex-in-cell Methods	144
Acknowledgments	55	9 Flows with Solid Boundaries	145
References	55	10 Other Applications	149
		11 Related Chapters	152
3 Spectral Element and <i>hp</i> Methods	61	Acknowledgments	152
<i>Robert M. Kirby/George Em Karniadakis</i>		References	152
1 Introduction	61	Further Reading	153
2 Polynomial Expansions on Unstructured Grids	63	6 Incompressible Viscous Flows	155
3 Incompressible Flows	67	<i>Rolf Rannacher</i>	
4 Compressible Flows	74	1 Introduction	155
5 Plasma Flows	81	2 Mathematical Models	156
6 Discussion	85	3 Discretization of Space	160
7 Related Chapters	88	4 Discretization of Time	166
Acknowledgments	88	5 Error Control and Mesh Adaptation	170
References	88	6 Solution of the Algebraic Systems	175
		Acknowledgment	179
4 Discontinuous Galerkin Methods for Computational Fluid Dynamics	91	References	179
<i>B. Cockburn</i>		7 Computability and Adaptivity in CFD	183
1 Introduction	91	<i>J. Hoffman/C. Johnson</i>	
2 Linear Hyperbolic Problems	92	1 Introduction	183
3 Nonlinear Hyperbolic Problems	96	2 Outline	186
4 DG Methods for Second-order Elliptic Problems	115	3 References	186
5 DG Methods for Convection-dominated Problems	120	4 The Incompressible Navier–Stokes Equations	186
6 Concluding Remarks and Bibliographical Notes	123	5 Discretization: General Galerkin G^2	187
7 Related Chapters	123	6 Adaptive Computation of the Drag of a Bluff Body	189
		7 Drag of a Square Cylinder	191
		8 The Drag of a Surface-mounted Cube	192
		9 The Drag Versus the Total Dissipation	195

10 Reliability and Efficiency of the Adaptive Method	197	Acknowledgment	400
11 Averaged Navier–Stokes Equations and Reynolds Stresses	198	References	400
12 The Subgrid Model from Stabilization	198		
13 Computability in Transition to Turbulence	199		
14 Applications to Stationary Benchmark Problems in 3D	201		
15 Related Chapters	205		
Acknowledgments	205		
References	205		
8 Dynamic Multilevel Methods and Turbulence	207	12 Industrial Aerodynamics	407
<i>T. Dubois/F. Jauberteau/R. M. Temam</i>		<i>Frédéric L. Chalot</i>	
1 Introduction	207	1 Introduction	407
2 Turbulence: Multilevel Methods for the Navier–Stokes Equations	209	2 The Historical Development of Computational Flow Mechanics	408
3 Multilevel Methods for the Shallow Water Equations	240	3 Euler code	413
4 Renormalization of Small Eddies	259	4 Navier–Stokes Code	416
5 Conclusion: Summary and Perspectives	263	5 Reynolds-averaged Turbulence Modeling	418
Acknowledgments	264	6 Large Eddy Simulation	423
References	264	7 Mesh Generation	426
		8 Validation	428
		9 Code Interface	428
		10 Military Applications	428
		11 Civil Applications	431
		12 Space Applications	433
		13 Fundamental Studies and Research Work	436
		14 Shape Optimization	437
		15 Aeroacoustics	444
		16 Multidisciplinary Applications	448
		17 Conclusion	453
		18 Related Chapters	454
		Acknowledgments	454
		References	454
		Further Reading	457
9 Turbulence Direct Numerical Simulation and Large-eddy Simulation	269	13 CFD-based Nonlinear Computational Aeroelasticity	459
<i>Pierre Sagaut</i>		<i>Charbel Farhat</i>	
1 Introduction	269	1 Introduction	459
2 Mathematical Models and Governing Equations	271	2 The Three-field Formulation of Nonlinear Aeroelastic Problems	461
3 Basic Numerical Issues for DNS and LES	279	3 Recent Computational Advances	464
4 Subgrid-scale Modeling for the Incompressible Case	284	4 The Aero Simulation Platform	473
5 Extension of Subgrid Models for the Compressible Case	290	5 Sample Recent Validation Results	474
6 Boundary Conditions for LES	291	6 Conclusions	476
7 Applications of DNS and LES	293	Acknowledgments	477
8 Related Chapters	296	References	477
Acknowledgment	296		
References	296		
10 Turbulence Closure Models for Computational Fluid Dynamics	301	14 The Use of Mixed Finite Element Methods for Viscoelastic Fluid Flow Analysis	481
<i>Paul A. Durbin</i>		<i>Frank P. T. Baaijens/Martien A. Hulsen/Patrick D. Anderson</i>	
1 Introduction: The Role of Statistical Closure	301	1 Introduction	481
2 Reynolds-averaged Navier–Stokes Equations	301	2 Mathematical Formulation	481
3 Models With Scalar Variables	303	3 Steady Flow: Variational Formulations	482
4 Second Moment Transport	311	4 Time Dependent Flows	488
5 Reynolds-averaged Computation	318	5 Integral and Stochastic Constitutive Models	490
Note	322	6 Governing Equations	491
References	322	7 The Deformation Fields Method	492
		8 Brownian Configuration Fields	493
		9 Numerical Methods	494
		10 Results	494
		11 Conclusions and Discussion	495
		12 Related Chapters	496
		References	496
11 Aerodynamics	325		
<i>Antony Jameson</i>			
1 Focus and Historical Background	325		
2 Mathematical Models of Fluid Flow	330		
3 Potential Flow Methods	334		
4 Shock-capturing Algorithms for the Euler and Navier–Stokes Equations	348		
5 Discretization Scheme for Flows in Complex Multidimensional Domains	359		
6 Time-stepping Schemes	365		
7 Aerodynamic Shape Optimization	379		
8 Related Chapters	400		

15 Combustion	499	14 Extensions and Offshoots of EDICT	560
<i>T. J. Poinso/D. P. Veynante</i>		15 Mixed Interface-Tracking/Interface-Capturing Technique (MITICT)	561
1 Introduction	499	16 Edge-Tracked Interface Locator Technique (ETILT)	562
2 Combustion Regimes	500	17 Line-Tracked Interface Update Technique (LTIUT)	564
3 Governing Equations	504	18 Iterative Solution Methods	565
4 Combustion Terminology and Basics	507	19 Enhanced Solution Techniques	566
5 Homogeneous Reactors and Laminar Flames	513	20 Mixed Element-Matrix-Based/Element-Vector-Based Computation Technique (MMVCT)	567
6 Turbulent Flames	514	21 Enhanced-Discretization Successive Update Method (EDSUM)	568
7 Conclusions	523	22 Examples of Flow Simulations	570
8 Related Chapters	523	23 Concluding Remarks	574
References	523	24 Related Chapters	574
		Acknowledgments	574
		References	574
16 Blood Flow	527		
<i>Charles A. Taylor</i>		18 Ship Hydrodynamics	579
1 Introduction	527	<i>Eugenio Oñate/Julio García/Sergio R. Idelsohn</i>	
2 Overview of the Cardiovascular System	529	1 Introduction	579
3 Lumped Parameter Models	530	2 The Navier–Stokes Equations for Incompressible Flows. ALE Formulation	581
4 One-dimensional Wave Propagation Models	531	3 About the Finite Element Solution of the Navier–Stokes Equations	583
5 Three-dimensional Equations of Blood Flow	533	4 Basic Concepts of the Finite Calculus (FIC) Method	584
6 Future Work	540	5 FIC Equations for Viscous Incompressible Flow. ALE Formulation	585
Acknowledgments	540	6 Finite Element Discretization	587
References	540	7 Fluid-ship Interaction	589
		8 A Simple Algorithm for Updating the Mesh Nodes	590
17 Finite Element Methods for Fluid Dynamics with Moving Boundaries and Interfaces	545	9 Modeling of the Transom Stern Flow	591
<i>Tayfun E. Tezduyar</i>		10 Lagrangian Flow Formulation	591
1 Introduction	545	11 Modeling the Structure as a Viscous Fluid	592
2 Governing Equations	547	12 Computation of the Characteristic Lengths	592
3 Stabilized Formulations	548	13 Turbulence Modeling	593
4 DSD/SST Finite Element Formulation	549	14 Examples	594
5 Calculation of the Stabilization Parameters for Incompressible Flows	549	15 Concluding Remarks	607
6 Discontinuity-Capturing Directional Dissipation (DCDD)	550	16 Related Chapters	607
7 Calculation of the Stabilization Parameters for Compressible Flows and Shock-Capturing	551	Acknowledgments	607
8 Mesh Update Methods	553	References	607
9 Shear–Slip Mesh Update Method (SSMUM)	555		
10 DSD/SST Formulation for Fluid–Object Interactions in Spatially Periodic Flows	555	Contents for Volumes 1 and 2	611
11 Space–Time Contact Technique (STCT)	557		
12 Fluid–Object Interactions Subcomputation Technique (FOIST)	558	Subject Index	619
13 Enhanced-Discretization Interface-Capturing Technique (EDICT)	560
