

INTERNATIONAL EDITION

ARNOW DEXTER WEISS

Introduction to
Programming Using

java™

An Object-
Oriented Approach

second edition

Table of Contents

CHAPTER 1	Jumping into Java	1
1.1	Computers and Programs	1
1.2	Programs and Models	2
1.3	Objects, Classes, and Messages	3
1.4	Our First Object: A <code>PrintStream</code>	6
1.5	Sending a Message to the <code>System.out</code> Object	7
1.6	A Java Program	9
	Identifiers, Statement Order, Format, and Comments	10
1.7	Mechanics	13
1.8	Time	16
	Summary	17
	Key Terms	17
	Questions for Review	19
	Exercises	19
	Introduction: Web Pages, HTML, and Applets	21
CHAPTER 2	Sending Messages and Performing Operations	29
2.1	Introduction	29
2.2	Using <code>PrintStream</code> Objects	29
	References, Methods, and Messages	30
2.3	The <code>String</code> Class	32
2.4	Methods, Arguments, and Return Values	34
2.5	Reference Variables	35
	Variables and Assignment	38
2.6	Imperative Programming: Doing the Work	43
2.7	Using <code>String</code> Methods	51
2.8	Imperative Programming: Simple Conditionals	58
	Summary	62
	Key Terms	63

Questions for Review	64
Exercises	64
Painting and Positioning Graphics	69

CHAPTER 3

Working with Objects and Primitive Types	77
3.1 Introduction	77
3.2 Creating Objects	77
Origins of Objects	78
3.3 Imperative Programming: The boolean Type	81
3.4 Working with Objects	84
3.5 Dates and Calendars	84
3.6 Imperative Programming: Other Integer Types	86
3.7 BigInteger	88
Packages and the import Statement	89
3.8 Introduction to Input	90
3.9 The File Input Process	93
3.10 Keyboard Input	97
3.11 File Output	100
3.12 Network Computing: An Introduction	102
Java Documentation	105
Summary	108
Key Terms	109
Questions for Review	110
Exercises	110
Toward Animation	115

CHAPTER 4

Defining Classes	119
4.1 Introduction	119
4.2 Class Definition: Methods	119
4.3 Class Definition: Instance Variables	124
4.4 More on Methods: Return Values	129
4.5 Imperative Programming: Finding the Minimum	134
Variables, Declarations, and the return Statement	136
4.6 Still More on Methods: Parameters	137
4.7 State and Behavior	141

4.8	Class Definition: Putting It All Together	142
	Declarations, Access, and Objects	150
	Summary	152
	Key Terms	153
	Questions for Review	154
	Exercises	154
	A Simple Animation	157

CHAPTER 5

	Advanced Class Definition	165
5.1	Customizing New Objects: Constructors	165
	Constructors, Initializers, and Overloading	171
5.2	Example: A Name Class	173
5.3	Providing Class Behaviors	181
	Static Methods	185
5.4	Tracking Class-Wide Information: Static Variables	187
5.5	Defining Constant Values: final	189
	Working with Objects	191
5.6	Input Methods Revisited: Testing for End of Input	197
	Summary	198
	Key Terms	198
	Questions for Review	199
	Exercises	199
	Creating Controls and Interaction	201

CHAPTER 6

	Inside the Method: Imperative Programming	209
6.1	Introduction	209
6.2	A Metric Conversion Class	209
	float, double, and the for Statement	215
6.3	Approximating the Value of π	218
6.4	Cascaded and Compound Conditional Statements	230
	Logical Operators and Conditional Statements	233
	Summary	236
	Key Terms	237
	Questions for Review	237
	Exercises	238
	More on Interaction	241

CHAPTER 7	Designing Classes	247
7.1	Introduction	247
7.2	Designing Classes—An Overview	247
7.3	The Counter Class Revisited	248
7.4	An Automated Teller Machine	249
7.5	Dispatching Repairpeople: An Example	258
	Summary	268
	Questions for Review	268
	Exercises	268
	Multiple Controls: Layout and Event Handling	271

CHAPTER 8	Verifying Object Behavior	289
8.1	Introduction	289
8.2	Categories of Errors	290
	Java's Assertion Facility	293
8.3	Test Drivers	294
8.4	Automatic Testing	296
8.5	What to Test and How to Test It	299
8.6	Debugging Techniques	303
	Summary	305
	Key Terms	306
	Questions for Review	306
	Exercises	306
	Separating Display and Control	307

CHAPTER 9	Working with Multiple Objects	319
9.1	Introduction	319
9.2	Processing Multiple Objects	319
9.3	Loop Patterns	322
9.4	The Impact of Loops on Testing	324
9.5	A Telephone Book	325
9.6	Maintaining Multiple Values	330
9.7	Vector—A Simple Collection Class	332

9.8	Traversing Vectors Using for Loops	333
9.9	Revisiting the TelephoneBook Class	336
	Primitive Types and Collections: Revisiting the Wrapper Classes	338
9.10	An Example—Determining a Student's Relative Performance ..	339
9.11	Another Vector Application	343
	Object Methods	348
9.12	Introducing Arrays	351
9.13	Vectors and Arrays	353
9.14	Coin Flipping with Arrays	354
	Summary	356
	Key Terms	356
	Questions for Review	357
	Exercises	357
	Positioning Text	359

CHAPTER 10	Designing Iteration	375
	10.1 Introduction	375
	10.2 Designing Loops	375
	Two Loop Statements	380
	10.3 Another Simple Example	382
	10.4 Revisiting Loop Patterns	386
	10.5 Variations on the Repairperson Loop	391
	10.6 Totaling a Bank's Accounts	394
	10.7 More Loop Patterns: Counters, Accumulators, and Extremes ..	396
	10.8 Iterating Through Arrays	400
	Short Circuits, break, and continue	402
	10.9 A Loop Design Strategy: Refining an Imperfect Solution	405
	10.10 Example: The LOGO Turtle	410
	Summary	424
	Key Terms	424
	Questions for Review	425
	Exercises	425
	More Text Manipulation	429

CHAPTER 11	Maintaining Collections of Objects	445
	11.1 Overview	445
	11.2 Searching	445
	11.3 Binary Search	449
	11.4 Finding the Index of an Extreme	459
	11.5 Sorting	461
	11.6 Searching Files	467
	11.7 Threads: Computing in Parallel	471
	11.8 Threads: A Parallel File Search	476
	Summary	477
	Key Terms	478
	Questions for Review	478
	Exercises	478
	Threads	481
CHAPTER 12	Extending Class Behavior	491
	12.1 Introduction	491
	12.2 Extending Classes—Inheritance I	492
	12.3 A Better BufferedReader	493
	12.4 Adding State to the Subclass—Accessing the Superclass's State	497
	12.5 Revisiting the Name Class—Adding Additional State	498
	Inheritance	503
	12.6 Overriding Methods	510
	Polymorphism	510
	12.7 Factoring Out Common Behavior—Inheritance II	513
	12.8 Abstract Methods and Classes	517
	12.9 Specifying Common Behavior—Interfaces	520
	12.10 A Generic Sorting Method	522
	Summary	525
	Key Terms	526
	Questions for Review	527
	Exercises	528
	Exploring the Abstract Window Toolkit of the Java Class Hierarchy	529

CHAPTER 13	Exceptions	539
	13.1 Expect the Unexpected	539
	13.2 Encountering the Unexpected	540
	The Exception Class	543
	13.3 Handling the Unexpected	544
	13.4 Responsibility for the Unexpected	549
	13.5 Exceptions Are Not Always Errors	550
	Summary	552
	Key Terms	552
	Questions for Review	553
	Exercises	553
	The Model-View-Controller (MVC) Paradigm	555
CHAPTER 14	Recursion	567
	14.1 Introduction	567
	14.2 Example: Exponentiation	568
	14.3 How to Design a Recursive Method	571
	14.4 Recursive Methods: Under the Hood	574
	14.5 Recursion with Vectors, Arrays, and Strings	579
	14.6 Permutations	582
	14.7 Towers of Hanoi	585
	14.8 Recursion and Iteration	600
	Summary	602
	Key Terms	602
	Questions for Review	603
	Exercises	603
	Towers of Hanoi Applet	607
CHAPTER 15	Client-Server Computing	629
	15.1 Clients and Servers	629
	15.2 Internet Communication	629
	15.3 Client-Server Computing	634
	15.4 Some Simple Client Classes	637
	Summary	645

Key Terms	646
Questions for Review	646
Exercises	646
Swing	647

APPENDIX A	Glossary	661
APPENDIX B	Three Java Environments	667
APPENDIX C	AWIO	671
APPENDIX D	Traversing Collections Using Enumerations	679
