Object-Oriented
Program Development
Using

JAVA™

A Class-Centered Approach

Gary J. Bronson

Part 1 Creating and Using Java Classes 1

1 Introduction 2

- 1.1 Computer Science and Programming Languages 3
 - Programming Languages 4
 - The Development of Java 8
- 1.2 Objects and Classes 13
 - A Class Is a Plan 14
 - From Recipe to Class 17
 - A First Java Class 18
- 1.3 Constructing a Java Program 23
 - The main Method 24
 - Reserved Words 26
 - Standard Identifiers 26
 - Identifiers 27
- 1.4 The `PrintStream` Class's `print()` and `println()` Methods 29
- 1.5 Using the `javax.swing` Package 35
- 1.6 Programming Style 41
 - Comments 42
- 1.7 Common Programming Errors 44
- 1.8 Chapter Review 45
- 1.9 Chapter Supplement: Computer Hardware 48
 - History 48
 - Computer Hardware 51
 - Hardware Evolution 54
 - Bits and Bytes 57
 - Words and Addresses 58
 - Two's Complement Numbers 68

2 Creating Classes 60

- 2.1 Data Values and Arithmetic Operations 61
 - Integer Literals 61
 - Floating-Point Values 62
 - Character Values 65
 - Escape Sequences 65
 - Boolean Values 67
 - Arithmetic Operations 67

	Integer Division	70
	The Modulus Operator	71
	Negation	71
	Operator Precedence and Associativity	71
	String Concatenation	73
2.2	Constructing a Data Declaration Section: Variables	77
	Declaration Statements	79
	Constructing a Data Declaration Section	80
	Creating Objects	83
	Specifying Storage Allocation	88
2.3	Completing the Class: Methods	90
	Constructor Methods	91
	Accessor Methods	93
	Mutator Methods	94
	Convenience	100
2.4	Assignment Operations	102
	Multiple Declarations	106
	Assignment Variations	108
	Accumulating	109
	Counting	111
2.5	Program Design and Development: Object Identification	115
	From Objects to Classes	116
2.6	Common Programming Errors	122
2.7	Chapter Review	123
3	Developing Class Methods	126
3.1	Method and Parameter Declarations	127
	Writing the Method	129
	Reusing Method Names (Overloading)	133
	Passing a Reference Value	134
3.2	Returning a Single Value	140
	Returning Multiple Values	144
3.3	Method Development: Algorithms	147
3.4	Application: Swapping Values	152
3.5	static and final Variables	160
	static Methods	163
	Scope	166
	final Variables	168
	Placement of Statements	171
3.6	Common Programming Errors	174
3.7	Chapter Review	175
3.8	Chapter Supplement: Inside and Outside	176
	Abstraction and Encapsulation	177
	Code Reuse and Extensibility	178

Part 2 Methods and Statements 179

4 Input and Formatting Class Methods 180

- 4.1 Interactive Keyboard Input 181
 - The StringTokenizer Class 185
 - A First Look at User-Input Validation 188
- 4.2 Interactive Dialog Input 193
 - Exception Handling 197
- 4.3 Creating a Class Library 205
- 4.4 Formatted Output 209
- 4.5 Mathematical Methods 215
 - Casts 220
 - Conversion Methods 220
- 4.6 Common Programming Errors 226
- 4.7 Chapter Review 226
- 4.8 Chapter Supplement: Programming Errors 228
 - Compile-Time and Run-Time Errors 229
 - Syntax and Logic Errors 230

5 Selection 233

- 5.1 Relational Expressions 234
 - Logical Operators 235
 - A Numerical Accuracy Problem 238
- 5.2 The if-else Statement 240
 - Compound Statements 242
 - One-Way Selection 246
- 5.3 Nested if Statements 250
 - The if-else Chain 251
- 5.4 The switch Statement 257
- 5.5 Program Design and Development: Introduction to UML 263
 - Class and Object Diagrams 264
 - Relationships 267
- 5.6 Application: A Date Class 271
 - Explanation of the Basic Date Class 274
 - Using the Basic Date Class 276
 - Simplifying the Code 278
 - Adding Class Methods 279
- 5.7 Common Programming Errors 283
- 5.8 Chapter Review 285
- 5.9 Chapter Supplement: Program Testing 287

6 Repetition 289

- 6.1 Basic Loop Structures 290
 - Pretest and Posttest Loops 290
 - Fixed-Count Versus Variable-Condition Loops 292
- 6.2 The while Statement 292
- 6.3 Interactive while Loops 301
 - Sentinels 308
 - The break and continue Statements 309
 - The null Statement 310
- 6.4 The for Statement 312
 - Interactive for Loops 318
 - Nested Loops 319
- 6.5 The do-while Statement 325
 - Validity Checks 327
- 6.6 Recursion 329
 - Mathematical Recursion 329
 - How the Computation Is Performed 331
 - Recursion Versus Iteration 333
- 6.7 Program Design and Development: UML State Diagrams 335
- 6.8 Applications: Random Numbers and Simulations 340
 - Random Numbers 340
 - Simulations 342
- 6.9 Common Programming Errors 351
- 6.10 Chapter Review 352

Part 3 Reference and Collection Data Types 355

7 Strings and Characters 356

- 7.1 The String Class 357
 - Creating a String 357
 - Constructors 359
 - String Input and Output 362
- 7.2 String Processing 363
 - String Class Methods 363
 - Other String Methods 367
 - Character Methods 370
 - Conversion Methods 372
- 7.3 The StringBuffer Class 375
- 7.4 Program Design and Development: Program Performance Measures and Object-Oriented Technology (OOT) 383
 - Moving to OOT 385
- 7.5 Common Programming Errors 387
- 7.6 Chapter Review 388

8 Collections: Arrays 389

- 8.1 One-Dimensional Arrays 390
 - Input and Output of Array Values 396
- 8.2 Array Initialization 406
- 8.3 The Arrays Class: Searching and Sorting 414
 - The `sort()` and `binarySearch()` Methods 414
- 8.4 Arrays as Arguments 417
- 8.5 The Collections Framework: `ArrayLists` 421
 - The `ArrayList` Class 423
 - The Collections Helper Class 427
 - The Iterator Class 431
 - Parallel Arrays as Records 433
- 8.6 Two-Dimensional Arrays 436
 - Larger Dimensional Arrays 441
- 8.7 Common Programming Errors 445
- 8.8 Chapter Review 445
- 8.9 Chapter Supplement: Search and Sort Algorithms 447
 - Search Algorithms 447
 - Big-O Notation 454
 - Sort Algorithms 454

Part 4 Creating Swing-Based GUIs 465**9 Visual Programming Basics 466**

- 9.1 Event-Based Programming 467
 - The Event-Based Model 470
 - Containment Hierarchy 471
- 9.2 Creating a Swing-Based Window 474
 - Look and Feel 477
- 9.3 Adding a Window Closing Event Handler 479
 - The Event Delegation Model 480
 - Adapter and Inner Classes 483
 - Anonymous Classes 487
- 9.4 Adding a Button Component 490
 - Adding a Button 491
 - Adding ToolTips and Accelerator Keys 494
 - Adding an Event Handler 496
- 9.5 Common Programming Errors 500
- 9.6 Chapter Review 500

10 Additional Components and Event Handlers 505

- 10.1 Adding Multiple Components 506
 - Layout Managers 506
 - Keyboard Focus and Tab Control 512
- 10.2 Text Components for Display 515
 - Adding a JTextField Component 515
 - Setting Font and Color 522
 - JTextArea Components 525
- 10.3 Text Field Components for Data Entry 530
 - Constructing Focus Listeners 534
 - Input Validation Revisited 539
- 10.4 Check Box, Radio Button, and Group Components 542
 - Check Boxes 542
 - Radio Buttons 547
- 10.5 Keystroke Input Validation 553
- 10.6 Common Programming Errors 560
- 10.7 Chapter Review 561

Part 5 Additional Programming Topics 563

11 Additional Class Capabilities 564

- 11.1 Additional Class Features 565
 - The `this` Reference 565
 - Memberwise Assignment 571
- 11.2 Additional Applications 576
 - Application 1: A Single-Class Gas Pump Simulation 576
 - Application 2: A Multiclass Gas Pump Simulation 580
- 11.3 Class Inheritance 585
 - Polymorphism 591
 - Inheritance Diagrams 592
- 11.4 Reference Variables as Class Members 594
- 11.5 Common Programming Errors 601
- 11.6 Chapter Review 601

12 Files 603

- 12.1 Files and Streams 604
 - Files 604
 - File Stream Objects 605
 - Closing a Stream Object 609
 - Buffering 609
- 12.2 Reading and Writing Character-Based Files 611
 - Embedded and Interactive File Names 615
 - Reading from a Text File 617
 - Unbuffered I/O 624

12.3	Reading and Writing Byte-Based Files	631
12.4	Application: Creating and Using a Holiday Table	639
	The <code>getHolidays()</code> Method	641
	The <code>isHoliday()</code> Method	644
12.5	Random Access Files	651
	Using Fixed-Length Records	655
12.6	The <code>File</code> Class	661
	File Checking	664
12.7	Common Programming Errors	667
12.8	Chapter Review	667
12.9	Chapter Supplement: Character and Byte File Storage	672
13	Collections: List Creation and Maintenance	675
13.1	The Collections Framework	676
13.2	Linked Lists	681
	Constructing Your Own Linked List	684
	LinkedList Class Implementation	688
	The Collections Helper Class	691
	The Iterator and ListIterator Interfaces	693
13.3	Stacks	698
	Stack Class Implementation	700
13.4	Queues	704
	LinkedList Class Implementation	705
13.5	Common Programming Errors	709
13.6	Chapter Review	709
14	Additional Capabilities	711
14.1	Additional Features	712
	Other Number Bases	712
	The <code>flush()</code> Method	712
	Conditional Expressions	713
14.2	Bit Operators	714
	The AND Operator	715
	The Exclusive OR Operator	716
	The Shift Operators	718
14.3	Command-Line Arguments	720
14.4	Chapter Review	723

Appendices

A	Operator Precedence Table	725
B	Unicode Character Set	727

- C Compiling and Running a Java Program 730**
- D Obtaining Locales 733**
- E Creating Leading Spaces 735**
- F Creating and Using Packages 737**
- G A Keyboard Input Class 740**
- H Applets 746**
- I Real Number Storage 747**
- J Solutions and Source Code 750**
