# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
	DAVID W. BROOKS and GEOFF A. GILES	
1.1	Introduction	1
1.1.1	History	1
1.1.2	IP—patents	3
1.2	Market growth and the development of materials	4
1.2.1	PET fibre and film	7
1.2.2	Barrier materials	8
1.2.3	Competitive materials: PVC, AN/S (Lopac) and AN/MA (Barex)	11
1.3	Technology	13
1.3.1	Single-stage ISBM	14
1.3.2	Two-stage ISBM	14
1.3.3	Integrated two-stage ISBM	15
1.3.4	Heat setting	15
1.4	Packaging	16
1.4.1	Bottles in the early years	16
1.4.2	PET cans	18
1.4.3	Refillable bottles	22
1.4.4	Preform design, neck design—BPF, vent slots	23
1.4.5	Beer spheres	24
	References	25
<b>2</b>	<b>Commercial considerations</b>	<b>26</b>
	GEOFF A. GILES and GORDON J. BOCKNER	
2.1	Introduction	26
2.2	Container technologies	28
2.3	Product processing and filling requirements	29
2.4	Packer/filler shelf-life requirements	30
2.5	Cost and performance considerations	31
2.5.1	Material pricing	31
2.5.2	In-house manufacture of PET containers for packer/fillers	32
2.6	Recycling issues	33
2.7	End-use market penetration	34
	References	34

3.1	Introduction	36
3.2	Polymerisation and manufacturing processes	37
3.2.1	Manufacturing plants	40

3.3	Structures, morphology and orientation	44
3.3.1	Structures	44
3.3.2	Morphology	45
3.3.3	Orientation	48
3.3.4	Creep	59
3.4	Properties	60
3.4.1	Molecular weight and intrinsic viscosity	61
3.4.2	End group	64
3.4.3	Thermal properties	65
3.5	Rheology and melt viscosity	70
3.5.1	Melt viscosity	70
3.5.2	Melt flow	72
3.5.3	Moulding shrinkage	75
3.6	Moisture uptake and polymer drying	76
3.6.1	Moisture level	76
3.6.2	Polymer drying	77
3.7	Degradation reactions	80
3.7.1	Thermal and thermal oxidative degradation	80
3.7.2	Environmental degradation	81
3.8	Reheat characteristics	81
3.9	Gas barrier properties	83
3.10	Amorphous polyesters	87
3.10.1	Homopolymers	88
3.10.2	Low copolymers	89
3.10.3	Medium copolymers	91
3.10.4	High copolymers	92
3.11	Crystalline polymers	92
3.12	Polymer blends	93
3.13	Applications	93
3.14	Trends	94
3.15	Global	94

## **4 Barrier materials and technology 98**

### **DAVID W. BROOKS**

4.1	Introduction	98
4.2	Polyesters	98
4.2.1	PEN	99
4.2.1	Amorphous polyesters	100
4.2.2	Other polyesters	101
4.3	Barrier materials	102
4.3.1	EVOH	102
4.3.2	PVDC	104
4.3.3	Polyamides (nylon)	104
4.3.4	Liquid crystal polymers (LCP)	105
4.4	Barrier technology	106
4.4.1	Organic coatings	107
4.4.2	Inorganic coatings	107
4.4.3	Scavengers	109
4.4.4	Nanocomposites	111

4.5	Oxygen barrier	111
4.5.1	Packaging foods and beverages	113
4.5.2	Packaging oxygen-sensitive foods and beverages	113
4.6	Carbon dioxide barrier	114
4.7	Future trends	115

## **7 One-stage injection stretch blow moulding** **184**

### **BOB BLAKEBOROUGH**

7.1	Introduction	184
7.2	One-stage machines	189
7.2.1	One-stage machine construction	189
7.3	Process stations on a one-stage machine	192
7.3.1	Injection mould and hot runner	192
7.3.2	Conditioning station	195
7.3.3	Blowing station	196
7.4	'Integrated two-stage' machines	197
7.5	Drying system	198
7.5.1	Requirements for a reliable drying system	199
7.5.2	Drying process monitoring	200
7.6	Preform design	200
7.6.1	Neck finish	201
7.6.2	Preform weight	202
7.6.3	Cycle time and preform wall thickness	202
7.6.4	Stretch ratios	203
7.6.5	Injection mould design and manufacture	205
7.6.6	Preform design for varying container sizes	206
7.6.7	Preform weight adjustment	206
7.6.8	Differences between one- and two-stage preform designs	206
7.7	Container design	207
7.8	Hot-fill PET bottles	208
7.9	Quality control procedures	208
7.10	Preform examination	209
7.10.1	Appearance and shape	209
7.10.2	Preform weight	210
7.10.3	Neck dimensions	210
7.10.4	Preform eccentricity	210
7.10.5	Polarised light inspection	211
7.10.6	Intrinsic viscosity (IV)	211

7.10.7	Acetaldehyde (AA)	212
7.11	Container examination	212
7.11.1	Shape and appearance	212
7.11.2	Dimensions	212
7.11.3	Capacity	213
7.11.4	Container wall thickness and material distribution	214
7.11.5	Top load strength	215
7.11.6	Impact resistance (drop) test	215
7.11.7	Leakage of liquid (seal integrity)	215
7.11.8	Vacuum strength	216
7.11.9	Acetaldehyde (AA)	216
7.11.10	Oxygen permeation	217
7.11.11	Moisture vapour transmission rate	217
7.11.12	Product filling temperature	217
7.11.13	Container weight	217
7.12	Bottles for carbonated beverages	218
7.12.1	Burst pressure	218
7.12.2	Thermal stability	218
7.12.3	Carbonation retention	218
7.13	Additional tests for hot-fill containers	219
7.14	Additional tests for returnable/refillable PET bottles	220
	Appendix: one-stage and integrated PET machine manufacturers	220

## **8 Two-stage injection stretch blow moulding** **223**

### **MICHAEL KOCH**

8.1	Introduction	223
8.1.1	The principles of the two-stage process	223
8.1.2	Technological basics of PET as a stretch blow moulding material	227
8.1.2	Production concepts and target markets	233
8.2	Preform injection moulding	238
8.2.1	Injection machine concepts	239
8.2.2	Mould design	244
8.2.3	Productivity parameters	247
8.3	Stretch blow moulding	251
8.3.1	Principles of the two-stage stretch blow moulding process	251
8.3.2	Machinery concepts	264
8.3.3	Mould technology	268
8.4	Preform and container design	270
8.4.1	Container design	270
8.4.2	Preform design	274
	References	278
	Abbreviations	278

## **9 Injection blow moulding** **280**

### **MIKE WORTLEY**

9.1	Basic principles	280
9.2	History	281
9.3	Process identification	282
9.4	Commercial processes	283

9.4.1 Rotary table machines: Jomar, Uniloy and similar	283
9.5 Tooling	284
9.6 Procrea	286
9.7 Materials	286
9.8 Applications	287
9.9 Machine and process capabilities	287
<b>10 Hot-fill, heat-set, pasteurization and retort technologies</b>	<b>292</b>
<b>BORA TEKKANAT</b>	
10.1 The hot-fill process	292
10.2 The heat-set process	293
10.3 The pasteurization process	307
10.4 The retort process	310
10.5 Concluding remarks	313
References	314
<b>11 Environmental and recycling considerations</b>	<b>315</b>
<b>VINCE MATTHEWS</b>	
11.1 Introduction	315
11.2 European environmental policy	316
11.3 EU Packaging and Packaging Waste Directive	316
11.3.1 Compliance with the Directive's targets	318
11.3.2 Material identification	319
11.3.3 CEN standards and the essential requirements	320
11.3.4 CEN 'umbrella standard' (pren 13427)	320
11.3.5 Implementation of the Directive in the member countries	322
11.4 Collection and recovery procedures	323
11.4.1 Drop-off schemes	324
11.4.2 Kerbside collection schemes	324
11.4.3 Reverse vending machines	324
11.4.4 Other systems	325
11.4.5 Plastic bottle sorting	325
11.5 Plastics packaging waste	325
11.6 Recycling of PET	328
11.6.1 Principal methods of PET recovery	329
11.6.2 Contamination issues	330
11.6.3 Recycling of PET by mechanical methods	330
11.6.4 R-PET and food-contact quality	334
11.6.5 Recycling of PET by chemical methods—'solvolysis'	336
11.7 Environmental benefits of recycling	342
11.7.1 General principles of recycling	343
11.7.2 Application of the general principles to the recovery and recycling of PET bottles	346
11.8 Economic factors affecting PET bottle recycling	355
11.9 Markets for recovered PET	357
11.10 PET recycling—the future	359
