

FUNDAMENTALS OF

# Computer- Aided Engineering

B. Raphael and I.F.C. Smith

 WILEY

# Contents

<b>Foreword</b>	<b>xi</b>
<b>Preface</b>	<b>xv</b>
<b>1 Fundamental Logic and the Definition of Engineering Tasks</b>	<b>1</b>
1.1 Three Types of Inference	1
1.2 Engineering Tasks	3
1.3 A Model of Information and Tasks	5
1.4 Another Task Definition	8
1.5 The Five Orders of Ignorance	8
1.6 Summary	9
References	10
Exercises	10
<b>2 Complexity</b>	<b>11</b>
2.1 Program Execution Time versus Task Size	12
2.1.1 Estimating the Execution Time of a Program	12
2.2 'Big Oh' Notation	14
2.2.1 Definition of the Big Oh Notation	14
2.2.2 Big Oh and Tightness of Bound	15
2.2.3 Classification of Functions	20
2.2.4 Examples	21
2.2.5 Tractability and Algorithm Optimality	29
2.3 Practical Methods for Determining the Complexity of Algorithms	30
2.4 P, NP and NP-Completeness	33
2.4.1 Zero-One Integer Programming Problem	35
2.4.2 Classes of NP-complete Problems	36
2.5 Summary	36
Reference	37
Further Reading	37
Exercises	37
<b>3 Data Structures</b>	<b>41</b>
3.1 Introduction	41
3.2 Definitions	41
3.3 Derived Data Types	42
3.3.1 Examples of Derived Data Types	42
3.3.2 User-Defined Data Types	45

3.4	Abstract Data Types	46
3.4.1	Linked Lists	47
3.4.2	Graphs	50
3.4.3	Trees	52
3.4.4	Stacks	56
3.4.5	Queues	60
3.5	Conceptual Structural Design of Buildings	63
3.6	Summary	69
	Further Reading	70
	Exercises	70
<b>4</b>	<b>Object Representation and Reasoning</b>	<b>77</b>
4.1	Introduction	77
4.2	Grouping Data and Methods	77
4.3	Definitions and Basic Concepts	78
4.3.1	Classes and Objects	78
4.3.2	Object-Oriented Programming	79
4.3.3	Messages	79
4.4	Important Characteristics of Objects	80
4.4.1	Encapsulation of Data and Methods	80
4.4.2	Message-Passing Mechanism	81
4.4.3	Abstraction Hierarchy	81
4.4.4	Secondary Features of Object Representation	84
4.4.5	Decomposition versus Abstraction	85
4.5	Applications outside Programming	86
4.6	An Object-Oriented Design Methodology	86
4.6.1	Single versus Multiple Inheritance	86
4.6.2	Message-Passing Architecture	87
4.7	Summary	88
	References	88
	Further Reading	88
	Exercises	88
<b>5</b>	<b>Database Concepts</b>	<b>95</b>
5.1	Introduction	95
5.2	Basic Concepts	96
5.2.1	Initial Definitions	96
5.2.2	Evolution of Different Types of Database	96
5.2.3	The Three-Level Architecture	97
5.3	Relational Database Systems	97
5.3.1	The Relational Model	99
5.3.2	Limitations of Relational Databases	102
5.3.3	Accessing Data in Relational Databases	104
5.4	Relational Database Design	105
5.4.1	First Normal Form	106
5.4.2	Second Normal Form	106
5.4.3	Third Normal Form	109
5.4.4	Boyce-Codd and Higher Normal Forms	111
5.4.5	Importance of Database Design	111

5.5	Transaction Processing	111
5.5.1	Definition of Transaction	113
5.5.2	Implementing Transactions	113
5.5.3	Properties of Transactions	115
5.6	Other Types of Database	115
5.6.1	Object-Oriented Databases	115
5.6.2	Geographic Databases	116
5.6.3	Multimedia Database Systems	116
5.6.4	Distributed Databases	117
5.7	Summary	117
	Reference	118
	Further Reading	118
	Exercises	118
<b>6</b>	<b>Computational Mechanics</b>	<b>123</b>
6.1	Introduction	123
6.1.1	Challenges of Computational Mechanics	124
6.2	From Physical Principles to Practical Systems	124
6.3	Methods for Finding Solutions	126
6.3.1	Galerkin Method	127
6.3.2	Remarks	128
6.4	Issues in Computer-Aided Engineering	129
6.4.1	Accuracy	129
6.4.2	Speed	130
6.4.3	User Interaction	131
6.5	Summary	131
	References	131
	Further Reading	131
<b>7</b>	<b>Constraint-Based Reasoning</b>	<b>133</b>
7.1	Introduction	133
7.2	Terminology	135
7.3	Constraint-Solving Methods	136
7.3.1	Levels of Consistency for Label Propagation	137
7.3.2	Global Consistency in Label Propagation	138
7.3.3	Constraint Propagation	139
7.4	Reasoning with Constraints on Discrete Variables	139
7.4.1	CSP Complexity for Discrete Variables	141
7.5	Reasoning with Constraints on Continuous Variables	141
7.5.1	Constraint-Based Support	141
7.6	Summary	145
	Reference	146
<b>8</b>	<b>Optimization and Search</b>	<b>147</b>
8.1	Introduction	147
8.2	Basic Concepts	148
8.2.1	Types of Optimization Problem	149
8.2.2	Formulating Optimization Tasks	151
8.2.3	Representing Search Spaces	152

8.2.4	Representing Constraints	153
8.2.5	Some Optimization Problems	154
8.3	Classification of Methods	156
8.4	Deterministic Optimization and Search	157
8.4.1	Special Cases	157
8.4.2	Deterministic Methods	162
8.5	Stochastic Methods	168
8.5.1	Pure Global Random Search	169
8.5.2	Local Search with Multiple Random Starts	169
8.5.3	Simulated Annealing	170
8.5.4	Genetic Algorithms	171
8.5.5	Controlled Random Search	172
8.5.6	PGSL	172
8.6	A Closer Look at Genetic Algorithms	175
8.6.1	Representation: Genetic Encoding	175
8.6.2	Evaluating an Individual	176
8.6.3	Creating the Initial Population	176
8.6.4	The Fitness Function	176
8.6.5	Reproduction	177
8.6.6	Mutation	179
8.7	Summary of Methods	179
	References	180
	Further Reading	180
	Exercises	181
<b>9</b>	<b>Knowledge Systems for Decision Support</b>	<b>187</b>
9.1	Introduction	187
9.2	Important Characteristics of Knowledge Systems	188
9.3	Representation of Knowledge	189
9.3.1	Representation of Knowledge in Knowledge Systems	192
9.4	Reasoning with Knowledge	192
9.4.1	Rule Selection and Conflict Resolution	194
9.5	Importance of the User Interface	195
9.6	Maintenance of Knowledge	196
9.7	Model-Based Reasoning	196
9.8	Case-Based Reasoning	197
9.8.1	Stages of Case-Based Reasoning	197
9.9	Summary	203
	Reference	203
	Further Reading	203
<b>10</b>	<b>Machine Learning</b>	<b>205</b>
10.1	Introduction	205
10.2	Improving Performance with Experience	206
10.3	Formalizing the Learning Task	208
10.3.1	Searching Hypothesis Spaces	211
10.4	Learning Algorithms	212
10.4.1	Rote Learning	212
10.4.2	Statistical Learning Techniques	213

10.4.3	Deductive Learning	217
10.4.4	Exploration and Discovery	218
10.5	A Closer Look at Artificial Neural Networks	218
10.5.1	Types of Neural Network	223
10.5.2	Learning in Neural Networks	223
10.5.3	Summary	224
10.6	Summary	224
	References	225
	Further Reading	225
	Exercises	225
<b>11</b>	<b>Geometric Modelling</b>	<b>227</b>
11.1	Introduction	227
11.2	Engineering Applications	227
11.2.1	Criteria for Evaluating Representations	228
11.3	Mathematical Models for Representing Geometry	229
11.3.1	Two-Dimensional Representation of Simple Shapes	229
11.3.2	Curves without Simple Mathematical Representations	230
11.3.3	Bézier Curves	230
11.3.4	Mathematical Representation of Simple Surfaces	232
11.3.5	Bézier Patches	234
11.3.6	Mathematical Representation of Regular-Shaped Solids	234
11.4	Representing Complex Solids	235
11.4.1	Primitive Instancing	236
11.4.2	Mesh Representations	236
11.4.3	Sweep Representations	238
11.4.4	Boundary Representations	239
11.4.5	Decomposition Models	241
11.4.6	Constructive Solid Geometry	244
11.5	Applications	245
11.5.1	Estimation of Volume	245
11.5.2	3D Graphical View of a Structure	249
11.6	Summary	249
	Further Reading	250
<b>12</b>	<b>Computer Graphics</b>	<b>251</b>
12.1	Introduction	251
12.2	Tasks of Computer Graphics	251
12.3	Display Devices	252
12.3.1	Types of Display Device	252
12.3.2	From Geometrical Representations to Graphical Displays	253
12.4	Representing Graphics	253
12.4.1	Representing Colours	254
12.4.2	Coordinate System	254
12.4.3	Bitmap Representations	255
12.4.4	Higher-Level Representations	256
12.5	The Graphics Pipeline	257
12.5.1	Modelling Transformations	257
12.5.2	Viewing Transformations	261
12.5.3	Scan Conversion	267

12.6	Interactive Graphics	268
12.7	Summary	269
	Further Reading	269
<b>13</b>	<b>Distributed Applications and the Web</b>	<b>271</b>
13.1	Introduction	271
13.1.1	A Simple Example of a Client-Server System	272
13.1.2	Definitions	273
13.1.3	Trends Driving C/S Architecture	273
13.2	Examples of Client-Server Applications	275
13.2.1	File Servers	275
13.2.2	FTP Servers	275
13.2.3	Database Servers	276
13.2.4	Groupware Servers	276
13.2.5	Object Servers	276
13.2.6	Operating System Servers	276
13.2.7	Display Servers	277
13.2.8	Web Servers	277
13.2.9	Application Servers	278
13.3	Distinctive Features of C/S Systems	278
13.3.1	Asymmetrical Protocol	278
13.3.2	Message-Based Mechanism	279
13.3.3	Why Are Protocols Important?	281
13.4	Client-Server System Design	281
13.4.1	Three-Tier Architecture	282
13.4.2	Application Partitioning	283
13.5	Advantages of Client-Server Systems	284
13.6	Developing Client-Server Applications	285
13.6.1	TCP/IP Sockets	285
13.6.2	Other Middleware Options	286
13.7	The World Wide Web	286
13.7.1	Limitations of Exchanging Only Static Information	287
13.7.2	Common Gateway Interface	287
13.7.3	Engineering Applications on the Web	288
13.7.4	Other Models for Dynamic Information Exchange	288
13.8	Peer-to-Peer Networks	289
13.8.1	Information Interchange through P2P Networks	291
13.8.2	P2P Networks for Engineering Applications	291
13.8.3	Advantages of Peer-to-Peer Networks	292
13.8.4	Issues and Challenges	293
13.9	Agent Technology	293
13.9.1	Issues in Multi-Agent Systems	294
13.10	Summary	295
	Reference	295
	Further Reading	295
