
Automotive Electromagnetic Compatibility (EMC)

Terence Rybak and Mark Steffka

Kluwer Academic Publishers

Contents

Preface	XI
Chapter 1 What is EMC	
1.1 Background	1
1.2 Technology and EMC	4
1.3 Communication Technology Evolution	7
1.4 Convergence of Technology and Automotive Systems	8
1.5 Future Trends	10
Chapter 2 System Level Issues	
2.1 Definition of Component and System	13
2.2 Significance to EMC	15
Chapter 3 Power and Signal Return	
3.1 Introduction	17
3.2 Current Path	19
3.3 Safety Grounding	23
3.4 Single Point Ground (Single Reference)	24
Chapter 4 Basic Concepts Used in EMC	
4.1 Antennas	27
4.2 Omni-Directional Antennas	32
4.2.1 Quarter-Wave Vertical	32
4.2.2 Ground Plane	33
4.2.3 Other Antenna Types	35
4.2.3.1 Antenna Arrays	35
4.2.3.2 Unanticipated Antennas	35
4.2.3.3 Reduced Size Antennas	36
4.2.3.4 Gain Antennas	38
4.3 Other components in EMC	41
4.3.1 Inductance	41
4.3.2 Inductance of "Large" Wire Loops	43
4.3.3 Capacitance	43
4.4 Ideal and Actual Components	43
4.5 Transmission Lines	49

4.5.1	Characteristics of Commonly Used Transmission Lines"	51
4.5.2	Goal of transmission line	52
4.5.3	Transmission line capacitance	52
4.5.4	Transmission line impedance	54
4.5.5	How to install a PL 259 connector	55
4.5.6	Coax Cable Sample	56
4.6	Shields	61
4.6.1	Purpose of shields	61
4.6.2	Shielding effectiveness	62
4.6.3	Key parameters in shield design (electric field)	63
4.7	Fourier series and Frequency Spectrum Envelope	75
4.8	Capacitors, Inductors, and Actual Properties	78
4.9	Filtering Overview	81
4.9.1	Common Mode Filtering	81
4.9.2	Isolation	82
4.10	Enclosure Shielding	84
4.11	Shield Discontinuities	88
Chapter 5 Electromagnetic Fields		
5.1	Introduction	91
5.2	Characteristics of the Electromagnetic Environment	92
5.3	Comparison of Circuit Theory with EM Field Theory	98
5.4	Maxwell's equations	99
5.5	Regions Around a Source:	102
5.5.1	Far-Field	102
5.5.2	Transition Zone	104
5.5.3	Near-Field	104
5.6	Polarization	106
5.6.1	Magnetic Field Emissions	112
5.6.2	Modeling/Prediction Techniques	112
Chapter 6 EMC Testing		
6.1	EMC Disciplines	115
6.2	Radiated Emissions Diagnostics	118
6.2.1	Low-Frequency Specification	118
6.2.2	Bulk Current Injection	119
6.3	How a Switching Transient Occurs	121
6.4	Test Methods	123
6.4.1	EMC Instrumentation	123
6.4.2	Amplifiers	124
6.4.3	Antennas	130
6.4.4	Field measurement probes	133
6.4.5	Power Measurement	134
6.4.6	RF Signal Generator	135
6.4.7	Electronic Impedance Bridge	137
6.4.8	Spectrum Analyzer	138
6.4.9	Monitoring Equipment	143
6.5	Analysis of Results	143

6.6 Coaxial Cables	144
6.7 A "Virtual" Tour of AN EMC Lab	147
Chapter 7 EMC Modeling	
7.1 The Value of EMC Modeling	161
7.2 Emissions modeling	162
7.3 Goal of modeling	164
Chapter 8 Effects of Cable and Harnessing	
8.1 Conducted emissions and immunity	167
8.2 Auto Industry EMC Approaches	167
8.2.1 Significance of wiring to EMC	167
8.2.2 Role of wiring in EMC	168
8.2.3 Early vehicles wiring	168
8.2.4 Vacuum cleaner incident	169
8.2.5 Common Mode and Differential Mode Current	170
8.2.6 RF emissions and immunity	171
8.2.7 Ways to measure RF current	175
8.2.8 Differential mode RE levels	181
8.2.9 DM related to design of circuit	182
8.2.10 Cable Shielding	184
8.2.11 Cable and Wiring Classes	189
8.3 Filter Placement	190
8.4 Coupling between wires	196
8.5 Grounding and PCB layout	198
8.6 Ferrites	199
8.6.1 Ferrite Toroids	200
8.6.2 Clamp-On Ferrites	200
8.7 Attenuating Common Mode Currents on Unshielded Cables	201
8.8 Higher-Frequency Emissions	202
Chapter 9 Automobile Electrical/Electronics Systems	
9.1 Vehicle Generated Radiated Emissions	203
9.2 Bandwidth Relates to "Selectivity"	204
9.3 Broadband Noise	206
9.3.1 Motor Noise	206
9.3.2 Ignition Noise	206
9.3.3 SCR Noise	208
9.3.4 Overview of BB Noise Sources	211
9.4 Narrowband noise	211
9.4.1 Microprocessors and narrowband noise	211
9.4.2 Generation of narrowband interference	213
9.4.3 Narrowband radiate emissions case study	213
9.4.4 Impact of narrowband noise	215
9.5 Signal Characteristics	215
9.6 RE Differences Between "Identical" Components	217
9.7 Vehicle radiated emissions test	219
9.8 Summary	221

9.9 Digital System Design	221
9.10 Electromagnetic Environment	223
9.11 EMC Issue: Immunity to External Fields	226
9.11.1 Vehicle Anti-Lock Brake System (ABS)	227
9.11.2 Aircraft Passenger Carry-On Devices Cases	227
9.11.3 F-16 Flight Controls	229
9.11.4 Blimp Problems	230
9.11.5 Boeing 747 Automatic Direction Finder (ADF)	230
9.11.6 Severmorsk Disaster	230
9.11.7 Tornado Fighter Case	230
9.11.8 Libyan Strike	230
9.11.9 Antilock Braking System (ABS)	230
9.11.10 Fuel System Operation	231
9.11.11 Aircraft	231
9.11.12 Medical Equipment Cases	231
9.11.13 Talking EEG Machine	232
9.11.14 Ambulance Heart Monitor/Defibrillator	232
9.11.15 Runaway Wheelchairs	233
9.12 Inexpensive shielding methods	233
9.13 EMC Design for Immunity	235
9.13.1 Component Selection	236
9.13.2 Logic Families and dV/dt	238
9.13.3 Logic Families and dI/dt	239
9.14 Immunity Threshold	240
9.15 Auto Industry "Best Practices"	241
9.16 Ignition Systems	242
9.16.1 Spark Plugs	242
9.16.2 Distributors	246
9.16.3 Ignition Harnesses	247
Chapter 10 EMC Regulation of Automotive Systems	
10.1 INTRODUCTION	249
10.2 Radiated Emissions Requirements	249
10.3 Governmental Requirements	250
10.4 FCC Part 15	250
10.5 "Microvolts per Meter" and Watts	259
Chapter 11 Vehicle System Electrical Transients	
11.1 Background	263
11.2 Overview of the Vehicle Transient Environment	263
11.3 Component Selection	264
11.4 Logic Families and dV/dt	266
11.5 Logic Families and dI/dt	266
11.6 Load Induced Switching Transients	267
11.7 Specifying Control of the Switching Transient Phenomenon	270
11.8 Methods To Minimize The Impact Of Transients	271
11.9 Transient Suppression Circuit Topologies	272
11.1 Conclusions	272

Chapter 12 Electrostatic Discharge	
12.1 Overview of ESD	273
12.2 The Role of Insulating Material in ESD	275
12.3 Human Body Model for ESD	277
12.4 ESD Voltage Breakdown	276
12.5 Effects of ESD	277
12.6 ESD Test Methods	278
 Appendix A Acronyms and Abbreviations	 281
 Appendix B Useful Formulas	 285
 References	 289
 Index	 293
