## LINEAR TIMEINVARIANT SYSTEMS

**Martin Schetzen** 

## **CONTENTS**

Preface		ix	
1	General System Concepts		1
	1.1 T	The System Viewed as a Mapping	1
	1.2 S	System Analysis Concepts	4
	1.3 T	ime-Invariant (TI) Systems	5
	1.4 N	No-Memory Systems	8
	1.5 S	Simple Systems with Memory	17
	1.6 A	A Model of Echoing	22
	Problems		27
2	Linea	r Time-Invariant (LTI) Systems	33
	2.1 L	Linear Systems	33
		inear Time-Invariant (LTI) Systems	37
		The Convolution Integral	45
		The Unit-Impulse Sifting Property	48
	2.5	Convolution	56
	Proble	ms	
3	Prope	erties of LTI Systems	63

3.1 Tandem Connection of LTI Systems

63

vi	CON	TENTS	
	3.2	A Consequence of the Commutative Property	67
	3.3	The Unit Impulse Revisited	74
	3.4	Convolution Revisited	77
	3.5	Causality	80
	3.6	Stability	85
	3.7	System Continuity	90
	3.8	The Potential Integral	93
	Prob	lems	96
4	The	Frequency Domain Viewpoint	105
	4.1	The Characteristic Function of a Stable LTI System	106
	4.2	Sinusoidal Response	109
	4.3	Tandem-Connected LTI Systems	118
	4.4	Continuous Frequency Representation of a Waveform	123
	Prob	lems	128
5	The	Fourier Transform	133
5	<b>The</b> 5.1	Fourier Transform The Fourier Transform	<b>133</b> 134
5			
5	5.1	The Fourier Transform	134
5	5.1 5.2	The Fourier Transform An Example of a Fourier Transform Calculation	134 135
5	5.1 5.2 5.3	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions	134 135 136
5	5.1 5.2 5.3 5.4	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation	134 135 136 137
5	5.1 5.2 5.3 5.4 5.5	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform	134 135 136 137 139
5	5.1 5.2 5.3 5.4 5.5 5.6	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property	134 135 136 137 139 146
5	5.1 5.2 5.3 5.4 5.5 5.6 5.7	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties	134 135 136 137 139 146 147
5	5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties An Application of the Time-Differentiation Property An Application of the Scaling Property	134 135 136 137 139 146 147
5	5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8 5.9	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties An Application of the Time-Differentiation Property An Application of the Scaling Property A Parseval Relation and Applications	134 135 136 137 139 146 147 149
5	5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8 5.9 5.10 5.11	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties An Application of the Time-Differentiation Property An Application of the Scaling Property A Parseval Relation and Applications	134 135 136 137 139 146 147 149 152
5	5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8 5.9 5.10 5.11 Prob	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties An Application of the Time-Differentiation Property An Application of the Scaling Property A Parseval Relation and Applications Transfer Function Constraints	134 135 136 137 139 146 147 149 152 154
	5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8 5.9 5.10 5.11 Prob	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties An Application of the Time-Differentiation Property An Application of the Scaling Property A Parseval Relation and Applications Transfer Function Constraints  Bilateral Laplace Transform	134 135 136 137 139 146 147 149 152 154 161
	5.1 5.2 5.3 5.4 5.5 5.6 5.7 5.8 5.9 5.10 5.11 Prof	The Fourier Transform An Example of a Fourier Transform Calculation Even and Odd Functions An Example of an Inverse Fourier Transform Calculation Some Properties of the Fourier Transform An Application of the Convolution Property An Application of the Time- and Frequency-Shift Properties An Application of the Time-Differentiation Property An Application of the Scaling Property A Parseval Relation and Applications Transfer Function Constraints blems	134 135 136 137 139 146 147 149 152 154 161 170

Problems

203

	CONTENTS	vii
7	The Inverse Bilateral Laplace Transform	209
	7.1 The Inverse Laplace Transform	209
	7.2 The Linearity Property of the Inverse Laplace Transform	213
	7.3 The Partial Fraction Expansion	216
	7.4 Concluding Discussion and Summary	223
	Problems	227
8	Laplace Transform Analysis of the System Output	231
	8.1 The Laplace Transform of the System Output	231
	8.2 Causality and Stability in the s-Domain	237
	8.3 Lumped Parameter Systems	241
	8.4 Passive Systems	245
	8.5 The Differential Equation View of Lumped Parameter Systems	252
	Problems	260
9	S-Plane View of Gain and Phase Shift	265
	9.1 Geometric View of Gain and Phase Shift	265
	9.2 The Pole-Zero Pair	272
	9.3 Minimum-Phase System Functions	279
	9.4 Bandpass System Functions	286
	9.5 Algebraic Determination of the System Function	291
	Problems	299
10	Interconnection of Systems	305
	10.1 . Basic LTI System Interconnections	305
	10.2 Analysis of the Feedback System	308
	10.3 The Routh-Hurwitz Criterion	317
	10.4 System Block Diagrams	328
	10.5 Model Consistency	336
	10.6 The State-Space Approach	343
	Problems	350
1		

Annendiy A	A Primer on Complex Numbers and Complex	
Appoilain A	Algebra	353
Appendix B	<b>Energy Distribution in Transient Functions</b>	363
