

ALAN DENNIS

NETWORKING IN THE INTERNET AGE

CONTENTS

CHAPTER 1 INTRODUCTION TO DATA COMMUNICATIONS

Introduction 3

A Brief History of Communications in North America 4

A Brief History of Information Systems 6

A Brief History of the Internet 7

Data Communications Networks 9

Components of a Network 9

Types of Networks 11

Network Models 13

Application Layers 14

Internetwork Layers 15

Hardware Layers 16

Message Transmission Using Layers 16

Network Standards 20

The Importance of Standards 20

The Standards-Making Process 20

Common Standards 23

Future Trends 24

Pervasive Networking 24

The Integration of Voice, Video, and Data 25

New Information Services 26

Summary 27

CHAPTER 2 APPLICATION LAYERS

Introduction 33

Application Architectures 33

Host-Based Architectures 35

Client-Based Architectures 35

Client-Server Architectures 36

Best Practice Architectures 40

World Wide Web 42

How the Web Works 42

Inside an HTTP Request 43

Inside an HTTP Response 44

Electronic Mail 46

How E-Mail Works 47

Inside an SMTP Packet 51

Listserv Discussion Groups 52

Attachments in MIME 52

Other Applications 53

File Transfer Protocol (FTP) 53

Telnet 54

Instant Messaging 55

Videoconferencing 56

Summary 58

CHAPTER 3 INTERNETWORK LAYERS

Introduction 64

Internetwork Protocols 65

Transmission Control Protocol/Internet Protocol (TCP/IP) 66

Internetwork Packet Exchange/Sequenced Packet Exchange (IPX/SPX) 67

Transport Layer Functions 68

Linking to the Application Layer 68

Segmenting 69

Reliable Delivery 73

Addressing 77

Assigning Addresses 77

Address Resolution 81

Routing 84

Types of Routing 85

Routing Protocols 88

Multicasting 91

TCP/IP Example 92

Known Addresses, Same Subnet 93

Known Addresses, Different Subnet 95

Unknown Addresses 96

TCP Connections 97

TCP/IP and Network Layers 97

Summary 99

**CHAPTER 4 HARDWARE LAYERS:
LOCAL AREA NETWORKS**

Introduction	106
Topology	107
Shared Ethernet	107
Switched Ethernet	110
Media Access Control	113
Error Control	114
Error Detection	115
Error Correction	115
Message Delineation	117
Codes	117
Frame Layout	118
Frame Size	119
Data Transmission in the Physical Layer	120
10Base-T	121
Fast Ethernet	124
Gigabit Ethernet	127
The Best Practice LAN Design	130
Effective Data Rates	130
Costs	133
Recommendations	133
Summary	134

**CHAPTER 5 HARDWARE LAYERS:
BACKBONE NETWORKS**

Introduction	141
Backbone Architectures	142
Hierarchical Backbone	143
Flat Backbone	144
Collapsed Backbone	146
Virtual LAN	150
Fiber Distributed Data Interface	156
Topology	156
Media Access Control	156
Error Control	156
Message Delineation	158
Data Transmission in the Physical Layer	158
Asynchronous Transfer Mode (ATM)	158
Topology	159
Media Access Control	160
Error Control	162
Message Delineation	162
Data Transmission in the Physical Layer	163
ATM and LANS	163
The Best Practice Backbone Design	165
Architectures	165
Effective Data Rates	165

Conversion Between Protocols	166
Recommendations	167
Summary	169

**CHAPTER 6 HARDWARE LAYERS:
METROPOLITAN AND WIDE AREA NETWORKS**

Introduction	174
The Public Switched Telephone Network	174
PSTN Architecture	175
Analog Transmission	176
Digital Transmission of Analog Voice Data	180
Multiplexing	182
Circuit-Switched Networks	185
Topology	185
Plain Old Telephone Service	187
Integrated Services Digital Network	189
Dedicated-Circuit Networks	191
Topology	191
T-Carrier Services	196
Synchronous Optical Network	198
Packet-Switched Networks	200
Topology	200
Asynchronous Transfer Mode (ATM)	203
Frame Relay	205
Switched Multimegabit Data Service (SMDS)	205
Ethernet/IP Packet Networks	206
Virtual Private Networks	206
Topology	207
VPN Types	209
The Best Practice MAN/WAN Design	210
Summary	212

CHAPTER 7 THE INTERNET

Introduction	217
How The Internet Works	218
Basic Architecture	218
Connecting to an ISP	220
The Internet Today	222
Internet Access Technologies	223
Digital Subscriber Line	224
Cable Modems	227
Fixed Wireless	230
Mobile Wireless	232
Future Technologies	233
Internet Governance	235
Internet 2	236
The Best Practice Internet Access Design	237
Summary	240

CHAPTER 8 *HARDWARE LAYERS:* ***WIRELESS LOCAL AREA NETWORKS***

Introduction	245
IEEE 802.11B	245
Topology	246
Media Access Control	248
Error Control	250
Message Delineation	250
Data Transmission in the Physical Layer	252
IEEE 802.11A	255
Topology	255
Media Access Control	256
Error Control	256
Message Delineation	256
Data Transmission in the Physical Layer	257
IEEE 802.11G	259
Bluetooth	260
Topology	260
Media Access Control	261
Error Control	261
Message Delineation	261
Data Transmission in the Physical Layer	262
The Best Practice WLAN Design	263
Effective Data Rates	263
Costs	265
Recommendations	265
Summary	268

CHAPTER 9 *NETWORK DESIGN*

Introduction	273
The Traditional Network Design Process	273
The Building-Block Network Design Process	274
Needs Analysis	276
Geographic Scope	278
Application Systems	280
Network Users	280
Categorizing Network Needs	280
Deliverables	281
Technology Design	281
Designing Clients and Servers	281
Designing Circuits and Devices	282
Network Design Tools	283
Deliverables	284
Cost Assessment	285
Request for Proposal	286
Selling the Proposal to Management	286
Deliverables	288

Designing for Network Performance	288
Managed Networks	288
Network Circuits	292
Network Devices	294
Minimizing Network Traffic	295
Summary	298

CHAPTER 10 *NETWORK SECURITY*

Introduction	304
Why Networks Need Security	304
Types of Security Threats	304
Network Controls	307
Risk Assessment	308
Develop a Control Spreadsheet	308
Identify and Document the Controls	311
Evaluate the Network's Security	313
Controlling Disruption, Destruction, and Disaster	313
Preventing Disruption, Destruction, and Disaster	313
Detecting Disruption, Destruction, and Disaster	317
Correcting Disruption, Destruction, and Disaster	318
Controlling Unauthorized Access	321
Preventing Unauthorized Access	321
Detecting Unauthorized Access	338
Correcting Unauthorized Access	340
Summary	342

CHAPTER 11 *NETWORK MANAGEMENT*

Introduction	348
Organizing the Network Management Function	348
The Shift to LANs and the Internet	349
Integrating LANs, WANs, and the Internet	350
Integrating Voice and Data Communications	350
Configuration Management	351
Configuring the Network and Client Computers	352
Documenting the Configuration	352
Performance and Fault Management	354
Network Monitoring	354
Failure Control Function	356
Performance and Failure Statistics	358
End-User Support	361
Resolving Problems	361
Providing End-User Training	362
Cost Management	362
Sources of Costs	362
Reducing Costs	364
Summary	366

xvi **CONTENTS**

APPENDIX *TCP/IP GAME (VERSION 3)*

Introduction **369**

 Application Layer **370**

 Transport Layer **371**

 Network Layer **373**

 Data Link Layer **374**

 Physical Layer **375**

Note to Instructors **376**

Preparing to Teach the Game **376**

Running the Game **376**

GLOSSARY **379**

INDEX **403**
