Tensor Calculus

with Applications

Translated from Russian by
Vladislav V. Goldberg

Contents

Translator's Introduction	ix
Preface to the Russian Edition	xi
Chapter 1 Vector Spaces	1
1.1 Concept of a Vector Space	1
1.2 Linear Dependence of Vectors	4
1.3 Dimension and Basis of a Vector Space	9
1.4 Orthonormal Bases in a Three-Dimensional Space. The Scalar Product of Vectors	13
1.5 The Vector Product and Triple Products of Vectors.....	19
1.6 Transformations of Orthonormal Basis. Fundamental Problem of Tensor Calculus	26
1.7 Some Topics in Three-Dimensional Analytic Geometry	35
Chapter 2 Multilinear Forms and Tensors	45
2.1 Linear Forms	45
2.2 Bilinear Forms	48
2.3 Multilinear Forms. General Definition of a Tensor	52
2.4 Algebraic Operations on Tensors	59
2.5 Symmetric and Antisymmetric Tensors	65
Chapter 3 Linear Transformations and Second-Order Tensors	77
3.1 Linear Transformations	77
3.2 The Matrix of a Linear Transformation	82
3.3 The Determinant of the Matrix of a Linear Transformation. The Rank of a Matrix.....	89
3.4 Linear Transformations and Bilinear Forms	94
3.5 Multiplication of Linear Transformations and Matrices ...	105
3.6 Inverse Linear Transformations and Inverse Matrices	113
3.7 The Group of Linear Transformations and Its Subgroups .	118

Chapter 4 Reduction of the Matrix of Linear Transformation to the Simplest Form	129
4.1 Eigenvectors and Eigenvalues of a Linear Transformation	129
4.2 Reduction of the Matrix of Linear Transformation to the Simplest Form in the Case of Distinct Eigenvalues	141
4.3 Matrix Polynomials and the Hamilton-Cayley Theorem	146
4.4 Properties of Eigenvectors and Eigenvalues of a Symmetric Linear Transformation	150
4.5 Diagonalization of the Matrix of a Symmetric Linear Transformation	153
4.6 Reduction of a Quadratic Form to Canonical Form	161
4.7 Representation of a Nonsingular Linear Transformation as the Product of a Symmetric Transformation and an Orthogonal Transformation	167
Chapter 5 The General Theory of Second-Degree Surfaces	173
5.1 General Equation of a Second-Degree Surface	173
5.2 Reduction of the General Equation of Second-Degree Surfaces to the Simplest Form	178
5.3 Determination of the Type of Second-Degree Surface by Means of Its Invariants	183
5.4 Classification of Second-Degree Surfaces	188
5.5 Application of the Theory of Invariants to Classification of Second-Degree Surfaces	193
5.6 Central and Noncentral Second-Degree Surfaces	198
5.7 Examples	201
Chapter 6 Applications of Tensor Calculus to Some Problem of Mechanics and Physics	211
6.1 The Inertia Tensor	211
6.2 Properties of Crystals Connected with Second-Order Tensors	220
6.3 The Stress and Strain Tensors	230
6.4 Further Properties of Crystals	245

Chapter 7 Foundations of Tensor Analysis	259
7.1 Tensor Fields and Their Differentiation	259
7.2 Mechanics of a Deformable Medium	274
7.3 Orthogonal Curvilinear Coordinate Systems	283
7.4 Moving Frame of an Orthogonal Curvilinear Coordinate System and Tensor Fields	293
7.5 Differentiation of a Tensor Field in Curvilinear Coordinates	304
 Selected Answers and Hints	 317
Bibliography	345
Index	349
