

Principles of Computer-Aided Design and Manufacturing

Second Edition

Farid Amirouche

Contents

List of Figures viii

Preface xvi

1 Historical Perspective on Digital Computers 1

- 1.1 Introduction 1
- 1.2 History of the Computer 1
- 1.3 Computer Categories 6
- 1.4 Computer Hardware 8
- 1.5 Programming Languages 9
- 1.6 History of CAD 10
- 1.7 The Role of Computers in the Future 18
- Bibliography 22

2 Computer-Aided Design 25

- 2.1 Introduction 25
- 2.2 Conventional Approach to Design 25
- 2.3 Description of the Design Process 27
- 2.4 Computer-Aided Design 36
- 2.5 Parametric and Variational Designs 39
- 2.6 Engineering Analysis and CAD 52
- 2.7 Computer-Aided Engineering (CAE) 57
- 2.8 Integrated Database-Management Systems in CAE 60
- 2.9 CAE Product Development 61
- 2.10 CAE Implementation 61
- 2.11 Simulation-Based Design and Beyond 62
- Problems 65
- Bibliography 66

3 Transformation and Manipulation of Objects 69

- 3.1 Introduction 69
- 3.2 Transformation Matrix 72

3.3	2D Transformation	73
3.4	Arbitrary Rotation about the Origin	74
3.5	Rotation by Different Angles	75
3.6	Concatenation	76
3.7	2D Translation	77
3.8	Projection onto a 2D plane	78
3.9	Overall Scaling	78
3.10	Rotation about an Arbitrary Point	79
3.11	2D Reflection	83
3.12	3D Transformation	88
3.13	3D Scaling	88
3.14	3D Rotation of Objects	91
3.15	3D Reflection and Mirror Imaging	98
3.16	3D Translation	103
3.17	3D Rotation about an Arbitrary Axis	104
3.18	3D Visualization	113
3.19	Trimetric Projection	114
3.20	Isometric Projection	119
	Problems	121
	Bibliography	126

4 Description of Curves and Surfaces 127

4.1	Line Fitting	128
4.2	Nonlinear Curve Fitting with a Power Function	131
4.3	Curve Fitting with a Higher-Order Polynomial	133
4.4	Chebyshev Polynomial Fit	136
4.5	Fourier Series of Discrete Systems	139
4.6	Cubic Splines	146
4.7	Parabolic Cubic Splines	147
4.8	Nonparametric Cubic Spline	155
4.9	Boundary Conditions	157
4.10	Bezier Curves	159
4.11	Differentiation of Bezier Curve Equation	162
4.12	B-Spline Curve	163
4.13	Nonuniform Rational B-Spline (NURBS) Curve	165
4.14	Surface Creation	167
4.15	Plane Surface	168
4.16	Ruled Surface	168
4.17	Rectangular Surface	169
4.18	Surface of Revolution	169
4.19	Application Software	170
	Problems	173
	Bibliography	175

5 Solid Modeling 177

5.1	Introduction	177
5.2	Construction Techniques	178

5.3	Representation Schemes	183
5.4	Applications of Solid Modeling	193
	Problems	194
	Bibliography	201

6 Optimization Techniques 203

6.1	Introduction	203
6.2	System Modeling	204
6.3	Design Optimization	207
6.4	Optimal Design Concept	210
6.5	Unconstrained Optimization	212
6.6	Constrained Optimization	218
6.7	Fibonacci Method	223
6.8	Newton's Method	230
6.9	Linear Programming	232
6.10	Geometric Programming	234
6.11	Other Optimization Techniques	235
	Problems	235
	Bibliography	238

7 Introduction to the Finite-Element Method 241

7.1	Introduction	241
7.2	Basic Concepts in the Finite-Element Method	242
7.3	Potential-Energy Formulation	253
7.4	Closed-Form Solution	256
7.5	Weighted-Residual Method	258
7.6	Galerkin Method	259
	Problems	260
	Bibliography	263

8 Trusses—A Finite-Element Approach 265

8.1	Introduction to Truss Analysis	265
8.2	Finite-Element Formulation	266
8.3	Properties of the Local Stiffness Matrix	270
8.4	Global Stiffness Matrix	270
8.5	Solution of the Truss Problem	275
8.6	Evaluation of the Local Forces	278
8.7	Stress Analysis	283
8.8	Force and Displacement Incidence Matrices	284
8.9	Analysis of 3D Trusses	287
	Problems	288
	Bibliography	292

9 Heat-Conduction Analysis and the Finite-Element Method 293

9.1	Introduction	293
9.2	One-Dimensional Elements	294

9.3	Finite-Element Formulation	295
9.4	Heat-Conduction Analysis of a Two-Element Rod	306
9.5	Formulation of Global Stiffness Matrix for N Elements	308
9.6	2D Heat-Conduction Analysis	312
9.7	Element-Conductivity Matrix	315
9.8	Element-Forcing Function	317
9.9	FEM and Optimization	327
	Problems	331
	Bibliography	335

10 Dynamic Analysis—A Finite-Element Approach 337

10.1	Introduction	337
10.2	Element Stiffness and Mass Matrices	338
10.3	Axial Deformation	340
10.4	Bending or Transverse Deformation of a Beam	343
10.5	Bernoulli Beam	348
10.6	Force Vector	349
10.7	Boundary Conditions	352
10.8	Planar Beam Structure	353
10.9	Eigenvalue Problem	355
10.10	Modal Analysis	360
	Problems	365
	Bibliography	368

11 Industrial Robotics 371

11.1	Introduction	371
11.2	Configuration of a Robot	373
11.3	Programming Robots	377
11.4	Programming Languages	379
11.5	Sensory System of a Robot	384
11.6	Fundamentals of a Gripper Design	389
11.7	Positioning a Robot in Space	392
11.8	Defining the Workspace of a Robot	396
11.9	Robots and Computer-Aided Design	399
	Problems	401
	Bibliography	403

12 Robot Economics 405

12.1	Introduction	405
12.2	Economic Justification	406
12.3	Justification of Robot Implementation	409
12.4	Robot Applications	415
12.5	Selection and Implementation of Robots	420
	Problems	421
	Bibliography	422

13 Group Technology 425

13.1	Introduction	425
13.2	Part Classification and Coding	426

13.3	A Proposed Classification System	434
13.4	Work Cells	437
13.5	Computerized Coding and Information Retrieval	444
13.6	Benefits of Group Technology	449
	Problems	450
	Bibliography	451

14 Computer-Integrated Manufacturing 455

14.1	Introduction	455
14.2	CIM Objectives	456
14.3	The Enterprise and Product Modeling	458
14.4	CIM Architecture	460
14.5	Computer-Aided Process Planning	463
14.6	Planning and Control within CIM	467
14.7	Capacity Planning	470
14.8	Database Management Systems	471
14.9	CIM Implementation	472
14.10	Costs Associated with CIM Implementation	473
	Bibliography	474

15 Implementation of a CAD/CAM System 475

15.1	Introduction	475
15.2	Misconceptions about CAD/CAM	475
15.3	Looking for a System	476
15.4	Practical Benefits	477
15.5	Costs	478
15.6	Selecting a Vendor	478
15.7	Testing the System	480
15.8	The CAD/CAM Market	480
	Bibliography	481

Appendix A Matrices 483

A.1	Definition	483
A.2	Notation and Principal Types of Matrices	483
A.3	Determinants	487
A.4	Matrix Partitioning	489
A.5	Matrix Operations	489
A.6	Matrix Laws	491
A.7	Method to Find the Inverse of a Matrix	491
A.8	Solution of Simultaneously Linear Equations	494

Bibliography 497

Index 505
