Preface xv

CHAPTER ONE

Introduction 1

REFERENCE 5

CHAPTER TWO

Stress and Equilibrium Equations

2-1	Concept of Stress	6
2-2	Stress Components and Equilibrium Equations	7
2-2-1	Stress Components in Cartesian Coordinates—Matrix Representation	7
2-2-2	Symmetry of Shear Stresses	9
2-2-3	Stresses Acting on an Inclined Plane	13
2-2-4	Normal and Tangential Stresses—Stress Boundary Conditions	16
2-2-5	Transformation of Stress Components—Stress as a Tensor	22
2-2-6	Stress Components in Polar Coordinates	24
2-2-7	Equilibrium Equations in Cartesian Coordinates	28
2-2-8	Equilibrium Equations in Polar Coordinates	31
2-2-9	Applicability of Equilibrium Equations	34
2-3	Principal Stresses and Invariants	35
2-3-1	Characteristic Equation	35
2-3-2	Principal Stresses and Principal Directions	36
2-3-3	Plane Stress—Principal Stresses and Principal Directions	39
2-3-4	Plane Stress—Mohr's Circle	41
2-3-5	Octahedral Stresses	42
2-3-6	Mean and Deviatoric Stresses	44
2-4	Three-Dimensional Mohr's Circles	45
2-5	Stress Analysis and Symbolic Manipulation	48
	PROBLEMS	51
	REFERENCES	54

CHAPTER THREE

Displacement and Strain

- 3-1 Introduction 55
- 3-2 Strain-Displacement Equations 56
- 3-3 Compatibility 60
- 3-4 Specification of the State of Strain at a Point 66
 - 3-4-1 Strain Gages 70
- 3-5 Rotation 72
- 3-6 Principal Strains 76
- 3-7 Strain Invariants 81
- 3-8 Volume Changes and Dilatation 82
- 3-9 Strain Deviator 83
- 3-10 Strain-Displacement Equations in Polar Coordinates 85
- PROBLEMS 91
- REFERENCES 94

CHAPTER FOUR

Relationships Between Stress and Strain

- 4-1 Introduction 95
- 4-2 Isotropic Materials—A Physical Approach 98
 - 4-2-1 Coincidence of Principal Stress and Principal Strain Axes 104
 - 4-2-2 Relationship between G and E 105
 - 4-2-3 Bulk Modulus 105
- 4-3 Two-Dimensional Stress-Strain Laws—Plane Stress and Plane Strain 107
 - 4-3-1 Plane Stress 107
 - 4-3-2 Plane Strain 110
- 4-4 Restrictions on Elastic Constants for Isotropic Materials 111
- 4-5 Anisotropic Materials 112
- 4-6 Material Symmetries 114
- 4-7 Materials with a Single Plane of Elastic Symmetry 115
- 4-8 Orthotropic Materials 117
 - 4-8-1 Engineering Material Constants for Orthotropic Materials 122
 - 4-8-2 Orthotropic Materials under Conditions of Plane Stress 124
 - 4-8-3 Stress-Strain Relations in Coordinates Other than the Principal Material Coordinates 126
- 4-9 Transversely Isotropic Materials 130
- 4-10 Isotropic Materials—A Mathematical Approach 135

4-11	Stress-Strain Relations for Viscoelastic Materials	141
4-12	Material Behavior beyond the Elastic Limit	150
4-12-1	Additional Experimental Observations	154
4-13	Criteria for Yielding	155
4-13-1	Maximum Shear Theory	155
4-13-2	Distortion Energy Theory	157
4-13-3	Comparison of the Two Theories	160
4-14	Stress-Strain Relations for Elastic-Perfectly Plastic Materials	163
4-15	Stress-Strain Relations when the Temperature Field Is Nonuniform	165
4-16	Stress-Strain Relations for Piezoelectric Materials	167
	PROBLEMS	183
	REFERENCES	185

CHAPTER FIVE

Energy Concepts

5-1	Fundamental Concepts and Definitions	186
5-2	Work	188
5-2-1	Work Done by Stresses Acting on an Infinitesimal Element	196
5-3	First Law of Thermodynamics	201
5-4	Second Law of Thermodynamics	207
5-5	Some Simple Applications Involving the First Law	210
5-5-1	Maxwell's Reciprocity Theorem	211
5-6	Strain Energy	215
5-6-1	Complementary Energy	217
5-6-2	Strain Energy in Beams	218
5-7	Castigliano's Theorem	227
5-8	Principle of Virtual Work	236
5-8-1	Principle of Virtual Work for Particles and Rigid Bodies	238
5-8-2	Principle of Virtual Work for Deformable Bodies	242
5-9	Theorem of Minimum Total Potential Energy	245
5-10	Applications of the Theorem of Minimum Total Potential Energy	248
5-11	Rayleigh-Ritz Method	251
5-12	Principle of Minimum Complementary Energy	257
5-13	Betti-Rayleigh Reciprocal Theorem	261
5-14	General Stress-Strain Relationships for Elastic Materials	266
	PROBLEMS	268
	REFERENCES	272

CHAPTER SIX**Numerical Methods I**

- 6-1 Method of Finite Differences 274
 - 6-1-1 Application to Ordinary Differential Equations 274
 - 6-1-2 Application to Partial Differential Equations 278
- 6-2 Method of Iteration 287
- 6-3 Method of Collocation 289
- PROBLEMS 290
- REFERENCES 291

CHAPTER SEVEN**Numerical Methods II: Finite Elements**

- 7-1 Introduction 292
- 7-2 Two-Dimensional Frames 293
- 7-3 Overall Approach 294
- 7-4 Member Force-Displacement Relationships 296
- 7-5 Assembling the Pieces 306
- 7-6 Solving the Problem 313
- 7-7 Example 316
- 7-8 Notes Concerning the Structure Stiffness Matrix 319
- 7-9 Finite Element Analysis 320
- 7-10 Constant Strain Triangle 322
- 7-11 Element Assembly 328
- 7-12 Example 330
- 7-13 Notes on Using Finite Element Programs 333
 - 7-13-1 Interelement Compatibility 333
 - 7-13-2 Inherent Overstiffness in a Finite Element 334
 - 7-13-3 Bending and the Constant Strain Triangle 335
- 7-14 Closure 336
- PROBLEMS 337
- REFERENCES 341

CHAPTER EIGHT

Beams

-
- 8-1 Bending of Continuous Beams 342
 - 8-1-1 Introduction 342
 - 8-1-2 Method of Initial Parameters 346
 - 8-1-3 Application of Castigliano's Theorem 351
 - 8-2 Unsymmetric Bending of Straight Beams 356
 - 8-3 Curved Beams 364
 - 8-3-1 Out-of-Plane Loaded Beams and Rings 364
 - 8-3-2 Transversely Loaded Circular Ring Supported by Three or More Supports (Biezeno's Theorem) [2] 368
 - 8-3-3 In-Plane Loaded Curved Beams (Arches) and Rings 380
 - 8-3-4 Bending, Stretching, and Twisting of Springs 393
 - 8-4 Beams on Elastic Foundations 400
 - 8-4-1 Equilibrium Equation for a Straight Beam 402
 - 8-4-2 Infinite Beams 404
 - 8-4-3 Finite Beams 410
 - 8-4-4 Stresses in Storage Tanks 414
 - 8-5 Influence Functions (Green's Functions) for Beams 421
 - 8-5-1 Straight Beams 421
 - 8-5-2 Straight Beams on Elastic Foundations 427
 - 8-6 Thermal Effects 434
 - 8-7 Composite Beams 436
 - 8-7-1 Stresses, Bending Moments, and Bending Stiffness of a Laminated Beam 436
 - 8-7-2 Differential Equation for Deflection of a Laminated Beam 439
 - 8-8 Limit Analysis 440
 - 8-9 Fourier Series and Applications 448
 - 8-10 Approximate Methods in the Analysis of Beams 455
 - 8-10-1 Finite Differences—Examples 455
 - 8-10-2 Rayleigh–Ritz Method—Examples 459
 - 8-11 Piezoelectric Beams 464
 - 8-11-1 Piezoelectric Bimorph 465
 - 8-11-2 Piezoelectric Multimorph 470

12-6	Some Simple Calculations of Stress Intensity Factors	724
12-7	The J Integral	727
	PROBLEMS	733
	REFERENCES	733

Appendixes

A.	Matrices	735
B.	Coordinate Transformations	743
	Index	749
