

Diesel Engine Engineering

Thermodynamics, Dynamics, Design, and Control

Andrei Makartchouk

<i>Preface</i>	iii
<i>Classification of Diesel Engines</i>	v
Chapter 1 Thermodynamics of the Diesel Engine	1
1 Introduction	1
2 Principle of diesel engine operation	1
3 Theoretical diesel engine cycles and thermal efficiency	4
4 Calculated cycles of four-stroke diesel engines	19
5 Mean indicated pressure of a four-stroke diesel engine	59
6 Mean indicated pressure of two-stroke diesel engines	62
7 Technical and economical characteristics of diesel engines	64
8 Heat balance of diesel engine operation	81
9 Main characteristics of a compound diesel engine turbocharger	94
10 Differential characteristics of a diesel engine working cycle in the engine cylinder	100
11 Diesel engine overload	107
12 Main characteristics of diesel engine operation	111
13 Conclusion	113
Chapter 2 Diesel Engine Dynamics	114
1 Introduction	114
2 Cylinder pressure	114

3	Force of inertia	118
4	Resultant force acting on the piston	121
5	Summary of the forces in a four-stroke diesel engine with in-line cylinders. Mean tangential force.	127
6	Summary of the forces acting in a two-stroke diesel engine	129
7	Summary of the forces acting in a V-diesel engine	131
8	Diesel engine torque	133
9	Balancing of torque oscillation and selection of flywheel	134
10	Applied masses and moments of inertia of rotating components	137
11	Starting up a diesel engine	141
12	Balancing engine vibration	145

Chapter 3 Design and Structural Analysis of Diesel Engine Components

		150
1	Introduction	150
2	Bedplate and base	150
3	Main bearing caps	155
4	Crankcase	159
5	Tension rods	167
6	Cylinder jacket and cylinder liner	169
7	Cylinder head	175
8	Piston	180
9	Piston pin	187
10	Piston rings	189
11	Connecting rod	194
12	Connecting rod bolts	204
13	Crankshaft	207
14	Flywheel bolts	222
15	Factor of safety of diesel engine components	223
16	Main dimensions of high-pressure fuel pumps and injector nozzles	224

Chapter 4 Automated Control of Diesel Engines

		229
1	Introduction	229
2	Block diagrams of automated control systems and their components	230
3	Steady-state operating condition of a diesel engine	236
4	Stability of modes of diesel engine operation	238
5	Static characteristics of a diesel engine	240
6	Static characteristics of users	241
7	Dynamic characteristics of diesel engine operation	241
8	Differential equation of a turbocompound diesel engine	258

9	Requirements for the automated speed governor of a diesel engine	260
10	Classification of automated speed governors	260
11	Classification of indirect-acting governors	267
12	Dynamic characteristics of a governor	279
13	Dynamic equation for the automated control system	
14	Automated control system stability evaluation	288
15	Determination of quality characteristics of the transient process of an automated control system	290
16	Determination of the static characteristic of an automated control system	291
17	Automated control of the diesel engine heat rate	293
18	Optimal load sharing between diesel engines operating in parallel	295
19	Automated speed control systems of diesel generator sets of electrical power plants	299
20	Governor-Actuator Woodward, model EGB-50PLS	310
21	Diesel engine with self-optimizing operation	324
<i>Appendix 1. Symbols</i>		329
<i>Appendix 2. Program to Determine Diesel Engine Characteristics</i>		335
<i>References</i>		363
<i>Index</i>		365
