

MECHANICS

THIRD EDITION

PIJUSH K. KUNDU  **IRA M. COHEN**

Contents

Preface	xvii
Preface to Second Edition	xviii
Preface to First Edition	xx
Author's Notes	xxiii

Chapter 1

Introduction

1. Fluid Mechanics	1
2. Units of Measurement	2
3. Solids, Liquids, and Gases	3
4. Continuum Hypothesis	4
5. Transport Phenomena	5
6. Surface Tension	8
7. Fluid Statics	9
8. Classical Thermodynamics	12
9. Perfect Gas	16
10. Static Equilibrium of a Compressible Medium	17
Exercises	22
Literature Cited	23
Supplemental Reading	23

Chapter 2

Cartesian Tensors

1. Scalars and Vectors	24
2. Rotation of Axes: Formal Definition of a Vector	25

3.	Multiplication of Matrices	28
4.	Second-Order Tensor	29
5.	Contraction and Multiplication	31
6.	Force on a Surface	32
7.	Kronecker Delta and Alternating Tensor	35
8.	Dot Product	36
9.	Cross Product	36
10.	Operator ∇ : Gradient, Divergence, and Curl	37
11.	Symmetric and Antisymmetric Tensors	38
12.	Eigenvalues and Eigenvectors of a Symmetric Tensor	40
13.	Gauss' Theorem	42
14.	Stokes' Theorem	45
15.	Comma Notation	46
16.	Boldface vs Indicial Notation	47
	Exercises	47
	Literature Cited	49
	Supplemental Reading	49

Chapter 3

Kinematics

1.	Introduction	50
2.	Lagrangian and Eulerian Specifications	51
3.	Eulerian and Lagrangian Descriptions: The Particle Derivative	53
4.	Streamline, Path Line, and Streak Line	54
5.	Reference Frame and Streamline Pattern	56
6.	Linear Strain Rate	57
7.	Shear Strain Rate	58
8.	Vorticity and Circulation	59
9.	Relative Motion near a Point: Principal Axes	61
10.	Kinematic Considerations of Parallel Shear Flows	64
11.	Kinematic Considerations of Vortex Flows	65
12.	One-, Two-, and Three-Dimensional Flows	68
13.	The Streamfunction	69
14.	Polar Coordinates	72
	Exercises	73
	Supplemental Reading	75

Chapter 4

Conservation Laws

1. Introduction	77
2. Time Derivatives of Volume Integrals	77
3. Conservation of Mass	79
4. Streamfunctions: Revisited and Generalized	81
5. Origin of Forces in Fluid	82
6. Stress at a Point	84
7. Conservation of Momentum	86
8. Momentum Principle for a Fixed Volume	88
9. Angular Momentum Principle for a Fixed Volume	92
10. Constitutive Equation for Newtonian Fluid	94
11. Navier–Stokes Equation	97
12. Rotating Frame	99
13. Mechanical Energy Equation	104
14. First Law of Thermodynamics: Thermal Energy Equation	108
15. Second Law of Thermodynamics: Entropy Production	109
16. Bernoulli Equation	110
17. Applications of Bernoulli’s Equation	114
18. Boussinesq Approximation	117
19. Boundary Conditions	121
Exercises	126
Literature Cited	128
Supplemental Reading	128

Chapter 5

Vorticity Dynamics

1. Introduction	129
2. Vortex Lines and Vortex Tubes	130
3. Role of Viscosity in Rotational and Irrotational Vortices	130
4. Kelvin’s Circulation Theorem	134
5. Vorticity Equation in a Nonrotating Frame	138
6. Velocity Induced by a Vortex Filament: Law of Biot and Savart. ...	140
7. Vorticity Equation in a Rotating Frame	141
8. Interaction of Vortices	146
9. Vortex Sheet	149
Exercises	150

Literature Cited	151
Supplemental Reading	152

Chapter 6

Irrotational Flow

1. Relevance of Irrotational Flow Theory	153
2. Velocity Potential: Laplace Equation	155
3. Application of Complex Variables	157
4. Flow at a Wall Angle	159
5. Sources and Sinks	161
6. Irrotational Vortex	162
7. Doublet	162
8. Flow past a Half-Body	164
9. Flow past a Circular Cylinder without Circulation	165
10. Flow past a Circular Cylinder with Circulation	168
11. Forces on a Two-Dimensional Body	171
12. Source near a Wall: Method of Images	176
13. Conformal Mapping	177
14. Flow around an Elliptic Cylinder with Circulation	179
15. Uniqueness of Irrotational Flows	181
16. Numerical Solution of Plane Irrotational Flow	182
17. Axisymmetric Irrotational Flow	187
18. Streamfunction and Velocity Potential for Axisymmetric Flow	190
19. Simple Examples of Axisymmetric Flows	191
20. Flow around a Streamlined Body of Revolution	193
21. Flow around an Arbitrary Body of Revolution	194
22. Concluding Remarks	195
Exercises	196
Literature Cited	198
Supplemental Reading	198

Chapter 7

Gravity Waves

1. Introduction	200
2. The Wave Equation	200
3. Wave Parameters	202
4. Surface Gravity Waves	205
5. Some Features of Surface Gravity Waves	209

6. Approximations for Deep and Shallow Water	215
7. Influence of Surface Tension	219
8. Standing Waves	222
9. Group Velocity and Energy Flux	224
10. Group Velocity and Wave Dispersion	227
11. Nonlinear Steepening in a Nondispersive Medium	231
12. Hydraulic Jump	233
13. Finite Amplitude Waves of Unchanging Form in a Dispersive Medium	236
14. Stokes' Drift	238
15. Waves at a Density Interface between Infinitely Deep Fluids	240
16. Waves in a Finite Layer Overlying an Infinitely Deep Fluid	244
17. Shallow Layer Overlying an Infinitely Deep Fluid	246
18. Equations of Motion for a Continuously Stratified Fluid	248
19. Internal Waves in a Continuously Stratified Fluid	251
20. Dispersion of Internal Waves in a Stratified Fluid	254
21. Energy Considerations of Internal Waves in a Stratified Fluid	256
Exercises	260
Literature Cited	261

Chapter 8

Dynamic Similarity

1. Introduction	262
2. Nondimensional Parameters Determined from Differential Equations	263
3. Dimensional Matrix	267
4. Buckingham's Pi Theorem	268
5. Nondimensional Parameters and Dynamic Similarity	270
6. Comments on Model Testing	272
7. Significance of Common Nondimensional Parameters	274
Exercises	276
Literature Cited	276
Supplemental Reading	276

Chapter 9

Laminar Flow

1. Introduction	277
2. Analogy between Heat and Vorticity Diffusion	279
3. Pressure Change Due to Dynamic Effects	279

4. Steady Flow between Parallel Plates	280
5. Steady Flow in a Pipe	283
6. Steady Flow between Concentric Cylinders	285
7. Impulsively Started Plate: Similarity Solutions	288
8. Diffusion of a Vortex Sheet	295
9. Decay of a Line Vortex	296
10. Flow Due to an Oscillating Plate	298
11. High and Low Reynolds Number Flows	301
12. Creeping Flow around a Sphere	303
13. Nonuniformity of Stokes' Solution and Oseen's Improvement	308
14. Hele-Shaw Flow	312
15. Final Remarks	314
Exercises	315
Literature Cited	317
Supplemental Reading	317

Chapter 10

Boundary Layers and Related Topics

1. Introduction	318
2. Boundary Layer Approximation	319
3. Different Measures of Boundary Layer Thickness	324
4. Boundary Layer on a Flat Plate with a Sink at the Leading Edge: Closed Form Solution	327
5. Boundary Layer on a Flat Plate: Blasius Solution	330
6. von Karman Momentum Integral	339
7. Effect of Pressure Gradient	342
8. Separation	343
9. Description of Flow past a Circular Cylinder	346
10. Description of Flow past a Sphere	353
11. Dynamics of Sports Balls	354
12. Two-Dimensional Jets	357
13. Secondary Flows	365
14. Perturbation Techniques	366
15. An Example of a Regular Perturbation Problem	370
16. An Example of a Singular Perturbation Problem	373
17. Decay of a Laminar Shear Layer	378
Exercises	382
Literature Cited	384
Supplemental Reading	385

Chapter 11

Computational Fluid Dynamics by Howard H. Hu

1. Introduction	386
2. Finite Difference Method	388
3. Finite Element Method	393
4. Incompressible Viscous Fluid Flow	400
5. Four Examples	416
6. Concluding Remarks	447
Exercises	449
Literature Cited	450

Chapter 12

Instability

1. Introduction	453
2. Method of Normal Modes	454
3. Thermal Instability: The Bénard Problem	455
4. Double-Diffusive Instability	467
5. Centrifugal Instability: Taylor Problem	471
6. Kelvin–Helmholtz Instability	476
7. Instability of Continuously Stratified Parallel Flows	484
8. Squire’s Theorem and Orr–Sommerfeld Equation	490
9. Inviscid Stability of Parallel Flows	494
10. Some Results of Parallel Viscous Flows	498
11. Experimental Verification of Boundary Layer Instability	503
12. Comments on Nonlinear Effects	505
13. Transition	506
14. Deterministic Chaos	508
Exercises	516
Literature Cited	518

Chapter 13

Turbulence

1. Introduction	519
2. Historical Notes	521
3. Averages	522
4. Correlations and Spectra	525
5. Averaged Equations of Motion	529

6.	Kinetic Energy Budget of Mean Flow	535
7.	Kinetic Energy Budget of Turbulent Flow	537
8.	Turbulence Production and Cascade	540
9.	Spectrum of Turbulence in Inertial Subrange	543
10.	Wall-Free Shear Flow	545
11.	Wall-Bounded Shear Flow	551
12.	Eddy Viscosity and Mixing Length	559
13.	Coherent Structures in a Wall Layer	562
14.	Turbulence in a Stratified Medium	565
15.	Taylor's Theory of Turbulent Dispersion	569
	Exercises	576
	Literature Cited	577
	Supplemental Reading	578

Chapter 14

Geophysical Fluid Dynamics

1.	Introduction	579
2.	Vertical Variation of Density in Atmosphere and Ocean	581
3.	Equations of Motion	583
4.	Approximate Equations for a Thin Layer on a Rotating Sphere	586
5.	Geostrophic Flow	588
6.	Ekman Layer at a Free Surface	593
7.	Ekman Layer on a Rigid Surface	598
8.	Shallow-Water Equations	601
9.	Normal Modes in a Continuously Stratified Layer	603
10.	High- and Low-Frequency Regimes in Shallow-Water Equations ..	610
11.	Gravity Waves with Rotation	612
12.	Kelvin Wave	615
13.	Potential Vorticity Conservation in Shallow-Water Theory	619
14.	Internal Waves	622
15.	Rossby Wave	632
16.	Barotropic Instability	637
17.	Baroclinic Instability	639
18.	Geostrophic Turbulence	647
	Exercises	650
	Literature Cited	651

Chapter 15

Aerodynamics

1. Introduction	653
2. The Aircraft and Its Controls	654
3. Airfoil Geometry	657
4. Forces on an Airfoil	657
5. Kutta Condition	659
6. Generation of Circulation	660
7. Conformal Transformation for Generating Airfoil Shape	662
8. Lift of Zhukhovsky Airfoil	666
9. Wing of Finite Span	669
10. Lifting Line Theory of Prandtl and Lanchester	670
11. Results for Elliptic Circulation Distribution	675
12. Lift and Drag Characteristics of Airfoils	677
13. Propulsive Mechanisms of Fish and Birds	679
14. Sailing against the Wind	680
Exercises	682
Literature Cited	684
Supplemental Reading	684

Chapter 16

Compressible Flow

1. Introduction	685
2. Speed of Sound	689
3. Basic Equations for One-Dimensional Flow	692
4. Stagnation and Sonic Properties	696
5. Area-Velocity Relations in One-Dimensional Isentropic Flow	701
6. Normal Shock Wave	705
7. Operation of Nozzles at Different Back Pressures	711
8. Effects of Friction and Heating in Constant-Area Ducts	717
9. Mach Cone	720
10. Oblique Shock Wave	722
11. Expansion and Compression in Supersonic Flow	726
12. Thin Airfoil Theory in Supersonic Flow	728
Exercises	731

Literature Cited	732
Supplemental Reading	733

Appendix A

Some Properties of Common Fluids

A1. Useful Conversion Factors	734
A2. Properties of Pure Water at Atmospheric Pressure	735
A3. Properties of Dry Air at Atmospheric Pressure	735
A4. Properties of Standard Atmosphere	736

Appendix B

Curvilinear Coordinates

B1. Cylindrical Polar Coordinates	737
B2. Plane Polar Coordinates	739
B3. Spherical Polar Coordinates	739

Appendix C

Founders of Modern Fluid Dynamics

Ludwig Prandtl (1875–1953)	742
Geoffrey Ingram Taylor (1886–1975)	743
Supplemental Reading	744

Index	745
