

BARRIER SYSTEMS FOR WASTE DISPOSAL FACILITIES

2ND EDITION

R. Kerry Rowe, Robert M. Quigley,
Richard W.I. Brachman & John R. Booker

Contents

Preface	ix
1 Basic concepts	1
1.1 Introduction	1
1.2 Overview of barrier systems	1
1.3 Transport mechanisms and governing equations	12
1.4 Complicating factors	28
1.5 Modelling the finite mass of contaminant	31
1.6 Modelling a thin permeable layer as a boundary condition	32
1.7 Hand solutions to some simple problems	34
1.8 Design considerations	37
1.9 Impact assessment	40
1.10 Choice of barrier system and service life considerations	42
1.11 Summary	43
2 Leachate characteristics and collection	45
2.1 Introduction	45
2.2 Liquid hydrocarbons	47
2.3 Landfill leachate	50
2.4 Collection, clogging and mounding	73
2.5 Estimating the service life of leachate collection blankets	97
2.6 Leachate mounding and liner temperature	98
2.7 Summary	99
3 Clayey barriers: compaction, hydraulic conductivity and clay mineralogy	103
3.1 Introduction	103
3.2 Methods of assessing hydraulic conductivity	105
3.3 Compacted clay liners	123
3.4 Clay mineralogy	136
3.5 Clay colloid chemistry	143
4 Clay/leachate compatibility by measurement of hydraulic conductivity	148
4.1 Introduction	148
4.2 Soil-MSW leachate compatibility	151
4.3 Compatibility of clays with liquid hydrocarbon permeants	159
4.4 Summary	171

5	Flow modelling	173
5.1	Introduction	173
5.2	One-dimensional flow models	173
5.3	Analysis of 2D and 3D flow	185
5.4	A finite difference approximation	186
5.5	Application of the finite element method to the analysis of plane flow	187
5.6	Boundary element methods	189
5.7	Calculating flow through holes in geomembranes	190
6	Chemical transfer by diffusion	198
6.1	Introduction	198
6.2	Free solution diffusion (D_0)	198
6.3	Diffusion through soil	201
6.4	Steady-state diffusion	202
6.5	Transient diffusion	209
6.6	Use of laboratory and field profiles to obtain diffusion coefficient D_e	212
6.7	Diffusion during hydraulic conductivity testing for clay/leachate compatibility	212
6.8	Diffusion through geomembranes	214
6.9	Summary	221
7	Contaminant transport modelling	223
7.1	Introduction	223
7.2	Analytical solutions	225
7.3	Application of Laplace transforms to develop a finite layer solution for a single layer	230
7.4	Contaminant transport into a single layer considering a landfill of finite mass and an underlying aquifer	232
7.5	Finite layer analysis	234
7.6	Contaminant migration in a regularly fractured medium	242
7.7	Finite layer analysis of geomembranes and gas-filled layers where there is phase change	245
8	Evaluation of diffusion and distribution coefficients	247
8.1	Introduction	247
8.2	Obtaining diffusion and partitioning/distribution coefficients: basic concepts	247
8.3	Example tests for obtaining diffusion and distribution coefficients for inorganic contaminants	250
8.4	Dispersion at low velocities in clayey soils	259
8.5	Effective porosity	259
8.6	Distribution coefficients and non-linearity	260
8.7	Effect of leachate composition, interaction and temperature	262
8.8	Diffusion and sorption of organic contaminants	265
8.9	Use of field profiles to estimate diffusion coefficients	267
8.10	Summary of diffusion parameters for saturated soil and rock	269
8.11	Diffusion in unsaturated porous media	269
8.12	Diffusion and partition coefficients for geomembranes	286

9	Field studies of diffusion and hydraulic conductivity	299
9.1	Introduction	299
9.2	Examples of long-term field diffusion	299
9.3	Examples of short-term field diffusion	304
9.4	Hydraulic conductivity of contaminated clay liners	312
9.5	Performance of a composite lagoon liner during 14 years of operation	316
10	Contaminant migration in intact porous media: analysis and design considerations	322
10.1	Introduction	322
10.2	Mass of contaminant, the reference height of leachate, H_r , and the equivalent height of leachate, H_f	322
10.3	Development of a contaminant plume	331
10.4	Effect of Darcy flux in a receptor aquifer	333
10.5	Effect of horizontal dispersivity in a receptor aquifer	334
10.6	Effect of aquifer thickness	334
10.7	Effect of landfill size on potential impact	336
10.8	$1\frac{1}{2}D$ versus 2D analysis and modelling of the aquifer beneath a liner	336
10.9	Effect of sorption	339
10.10	Effect of liner thickness	339
10.11	Effect of Darcy flux in the barrier and design for negligible impact	340
11	Migration in fractured media: analysis and design considerations	343
11.1	Introduction	343
11.2	Numerical considerations	345
11.3	Lateral migration through fractured media	346
11.4	Vertical migration through fractured media and into an underlying aquifer	365
11.5	Summary	377
12	Geosynthetic clay liners (GCLs)	379
12.1	Introduction	379
12.2	Basic properties	380
12.3	Swelling behaviour	380
12.4	Hydraulic conductivity	382
12.5	Factors influencing hydraulic performance	383
12.6	Solute transport	392
12.7	Gas migration	396
12.8	Installation	399
12.9	Internal and interface shear strength	399
12.10	GCLs in composite liners	401
12.11	Equivalency GCLs and CCLs	403
13	Geomembrane liners	405
13.1	Introduction	405
13.2	Physical response of HDPE geomembranes	406
13.3	Durability of HDPE geomembranes	417

Contents

13.4 Leakage through geomembranes	423
13.5 Diffusion of contaminants through HDPE geomembranes	441
13.6 Summary	444
14 Covers	446
14.1 Introduction	446
14.2 Controlling infiltration	446
14.3 Common final cover systems	447
14.4 Calculating percolation through the cover	449
14.5 Alternate cover systems	450
15 Geotechnical and related design issues	452
15.1 Introduction	452
15.2 Geotechnical considerations	452
15.3 Design of geotextiles	462
15.4 Leachate collection pipes	464
15.5 Manholes	478
16 Integration of hydrogeology and engineering in barrier design and impact assessment	480
16.1 Introduction	480
16.2 Hydraulic conductivity of aquitards	480
16.3 Some considerations in the design of highly engineered systems	488
16.4 Concentration of contaminant in the landfill	496
16.5 Failure of PLCS and SLCS	503
16.6 Composite liners	511
16.7 Expansion of landfills	519
16.8 Summary	521
Appendix A Glossary	524
Appendix B Notation	541
Appendix C Specific solution for matrix diffusion: one-dimensional, two-dimensional or three-dimensional conditions	548
Appendix D Bulk GCL void ratio	551
References	552
Index	580
