

GENETICALLY MODIFIED CROPS

THEIR DEVELOPMENT, USES, AND RISKS

G. H. LIANG, PhD
D. Z. SKINNER, PhD

EDITORS

CONTENTS

About the Editors	xi
Contributors	xiii
Preface	xvii
Chapter 1. Transformation: A Powerful Tool for Crop Improvement	1
<i>D. Z. Skinner</i>	
<i>S. Muthukrishnan</i>	
<i>G. H. Liang</i>	
Introduction	1
Incorporation of Transgenes into Crops	3
Methodology of Producing Transgenic Plants	5
Confirmation of Putative Transgenic Plants and Transformation Efficiency	7
Crop Species Amenable to Transformation	10
Current and Future Transgenic Crops	11
Food Safety and Risk Analysis	13
Chapter 2. Mechanism(s) of Transgene Locus Formation	17
<i>David A. Somers</i>	
<i>Paula M. Olhoft</i>	
<i>Irina F. Makarevitch</i>	
<i>Sergei K. Svitashv</i>	
Introduction	17
Plant Genetic Engineering Systems	20
Transgene Loci	27
Mechanisms for Transgene Locus Formation	47
Chapter 3. Gene Stacking Through Site-Specific Integration	71
<i>David W. Ow</i>	
Introduction	71
Heterologous Site-Specific Recombination Systems	72
Targeting via Cre-lox	74

Targeting via FLP-FRT	79
Expression of Targeted Transgenes	80
Prospects for Gene Stacking	83
ϕ C31 Site-Specific Recombination System	90
Concluding Remarks	96

Chapter 4. Transgenics of Plant Hormones and Their Potential Application in Horticultural Crops **101**

Yi Li
Hui Duan
Yan H. Wu
Richard J. McAvoy
Yan Pei
Degang Zhao
John Wurst
Qi Li
Keming Luo

Introduction	101
Auxins	102
Cytokinins	104
Gibberellins	107
Ethylene	109
Absciscic Acid	111
Concluding Remarks	112

Chapter 5. Avidin: An Egg-Citing Insecticidal Protein in Transgenic Corn **119**

Karl J. Kramer

Introduction	119
Mechanism of Action	120
History of Commercialization	121
Demonstration of Host Plant Resistance and Spectrum of Activity	122
Allergenicity	124
Safety	125
Male Sterility and Nonuniform Expression	126
Concluding Remarks	127

Chapter 6. Genetic Engineering of Wheat: Protocols and Use to Enhance Stress Tolerance	131
<i>Tom Clemente</i>	
<i>Amitava Mitra</i>	
Introduction	131
Selection and Visual Marker Genes for Transformation	140
Future Needs for Wheat Transformation	143
Potential Transgenes for Resistance to Pathogens	146
Potential Transgenes for Enhanced Tolerance Toward Abiotic Stress	153
Concluding Remarks	154
Chapter 7. Development and Utilization of Transformation in <i>Medicago</i> Species	165
<i>Deborah A. Samac</i>	
<i>Stephen J. Temple</i>	
Introduction	165
Plant Regeneration	166
Plant Transformation	170
Promoters for Constitutive and Tissue-Specific Expression of Transgenes in <i>Medicago</i>	175
Utilization of Transformation for Crop Improvement	180
Development of Roundup Ready Alfalfa: A Case Study	185
Conclusions	195
Chapter 8. Sorghum Transformation for Resistance to Fungal Pathogens and Drought	203
<i>S. Muthukrishnan</i>	
<i>J. T. Weeks</i>	
<i>M. R. Tuinstra</i>	
<i>J. M. Jeoung</i>	
<i>J. Jayaraj</i>	
<i>G. H. Liang</i>	
Introduction	203
Constraints to Sorghum Transformation	205
Sorghum Tissue Culture	206

Transformation Methods	206
Transgenic Sorghum Plants with Increased Stress Tolerance	214
Utilizing Transgenic Sorghums for Crop Improvement	218
Chapter 9. Rice Transformation: Current Progress and Future Prospects	225
<i>James Oard</i>	
<i>Junda Jiang</i>	
Introduction	225
Production of U.S. Transgenic Rice Lines and Field Evaluation of Herbicide Resistance	226
New Rice Polyubiquitin Promoter and Potential for Enhanced Transgene Expression	227
Transgene Delivery and Expression Studies	232
Transgenic Advances in Pest and Stress Tolerance	234
Novel Methods of Gene Transfer for Rice	239
Conclusions	240
Chapter 10. Cotton Transformation: Successes and Challenges	247
<i>Roberta H. Smith</i>	
<i>James W. Smith</i>	
<i>Sung Hun Park</i>	
Development of Cotton Transformation Technology	247
Insect- and Herbicide-Resistant Cotton	250
Commercial Use of Genetically Engineered Cotton	252
Chapter 11. Progress in Transforming the Recalcitrant Soybean	259
<i>Jack M. Widholm</i>	
Introduction	259
Organogenic Systems	260
New Transformation Method Possibilities and Improvements	267
Conclusions	273

Chapter 12. Progress in Vegetable Crop Transformation and Future Prospects and Challenges	281
<i>Zamir K. Punja</i>	
<i>Mistianne Feeney</i>	
Introduction	281
Transformation Technologies Used for Vegetable Crops	282
Stress-Resistant Vegetable Crops	291
Improvement of Horticultural Traits Through Genetic Engineering	295
Issues to Be Addressed	296
Future Prospects	297
Chapter 13. Genetic Transformation of Turfgrass	309
<i>Barbara A. Zilinskas</i>	
<i>Xiaoling Wang</i>	
Introduction	309
Regenerable Tissue Culture Prerequisite	311
Transformation Systems	318
Development of Value-Added Transgenic Turfgrass	337
Future Prospects	340
Chapter 14. Risks Associated with Genetically Engineered Crops	351
<i>Paul St. Amand</i>	
Introduction	351
Risks versus Benefits	352
Legal Risks	353
Risks to Humans	354
Risks to the Environment	357
The Unexpected	359
Index	365
