# Bacteria

in Biology, Biotechnology and Medicine

6th Edition

 WILEY

# Contents

---

## **Preface ix**

## **1 The bacteria: an introduction 1**

- 1.1 What are bacteria? 1
- 1.2 Why study bacteria? 3
- 1.3 Classifying and naming bacteria 4

## **2 The bacterial cell 6**

- 2.1 Shapes, sizes and arrangements of bacterial cells 6
- 2.2 The bacterial cell: a closer look 10
- 2.3 Trichomes and coenocytic bacteria 43

## **3 Growth and reproduction 44**

- 3.1 Conditions for growth 44
- 3.2 Growth in a single cell 49
- 3.3 Growth in bacterial populations 61
- 3.4 Diauxic growth 68
- 3.5 Measuring growth 68

## **4 Differentiation 69**

- 4.1 The life-cycle of *Caulobacter* 69
- 4.2 Swarming 72
- 4.3 Resting cells 73
- 4.4 Akinetes, heterocysts, hormogonia 77

**5 Metabolism I: energy 81**

- 5.1 Energy metabolism in chemotrophs 83
- 5.2 Energy metabolism in phototrophs 96
- 5.3 Other topics in energy metabolism 99
- 5.4 Transport systems 102

**6 Metabolism II: carbon 117**

- 6.1 Carbon assimilation in autotrophs 118
- 6.2 Carbon assimilation in heterotrophs 119
- 6.3 Synthesis, interconversion and polymerization of carbon compounds 122
- 6.4 Methylotrophy in bacteria 126

**7 Molecular biology I: genes and gene expression 128**

- 7.1 Chromosomes and plasmids 128
- 7.2 Nucleic acids: structure 132
- 7.3 DNA replication 138
- 7.4 DNA modification and restriction 145
- 7.5 RNA synthesis: transcription 147
- 7.6 Proteins: synthesis and other aspects 149
- 7.7 DNA monitoring and repair 160
- 7.8 Regulation of gene expression 163
- 7.9 RNA 188

**8 Molecular biology II: changing the message 191**

- 8.1 Mutation 191
- 8.2 Recombination 196
- 8.3 Transposition 199
- 8.4 Gene transfer 205
- 8.5 Genetic engineering/recombinant DNA technology 213

**9 Bacteriophages 278**

- 9.1 Virulent phages: the lytic cycle 280
- 9.2 Temperate phages: lysogeny 288
- 9.3 Androphages 291
- 9.4 Phage conversion 291
- 9.5 Transduction 292
- 9.6 How does phage DNA escape restriction in the host bacterium? 293

**10 Bacteria in the living world 295**

- 10.1 Microbial communities 295
- 10.2 Saprotrophs, predators, parasites, symbionts 300
- 10.3 Bacteria and the cycles of matter 302
- 10.4 Ice-nucleation bacteria 310
- 10.5 Bacteriology *in situ* – fact or fiction? 311
- 10.6 The greenhouse effect 312
- 10.7 Recombinant bacteria in the environment 314
- 10.8 Uncultivable/uncultured bacteria 314

**11 Bacteria in medicine 316**

- 11.1 Bacteria as pathogens 316
- 11.2 The routes of infection 317
- 11.3 Pathogenesis 330
- 11.4 The body's defences 340
- 11.5 The pathogen: virulence factors 358
- 11.6 Pathogen–host interactions: a new perspective 370
- 11.7 The transmission of disease 372
- 11.8 Laboratory detection and characterization of pathogens 373
- 11.9 Prevention and control of bacterial diseases 379
- 11.10 Notes on chemotherapy; phage therapy; biologicals 380
- 11.11 Some bacterial diseases 382

**12 Applied bacteriology I: food 393**

- 12.1 Bacteria in the food industry 393
- 12.2 Food preservation 395
- 12.3 Food poisoning and food hygiene 400

**13 Applied bacteriology II: miscellaneous aspects 407**

- 13.1 Feeding animals, protecting plants 407
- 13.2 Biomining (bioleaching) 409
- 13.3 Biological washing powders 411
- 13.4 Sewage treatment 411
- 13.5 Water supplies 415
- 13.6 Putting pathogens to work 422
- 13.7 Plastics from bacteria: 'Biopol' 422
- 13.8 Bioremediation 423
- 13.9 Biomimetic technology 424

**14 Some practical bacteriology 425**

- 14.1 Safety in the laboratory 425
- 14.2 Bacteriological media 426
- 14.3 Aseptic technique 431
- 14.4 The tools of the bacteriologist 432
- 14.5 Methods of inoculation 435
- 14.6 Preparing a pure culture from a mixture of organisms 436
- 14.7 Anaerobic incubation 439
- 14.8 Counting bacteria 441
- 14.9 Staining 444
- 14.10 Microscopy 446

**15 Man against bacteria 450**

- 15.1 Sterilization 450
- 15.2 Disinfection 454
- 15.3 Antisepsis 457
- 15.4 Antibiotics 457

**16 The identification and classification of bacteria 481**

- 16.1 Identification 481
- 16.2 Classification (taxonomy) of prokaryotes 500

**Appendix Minidescriptions of some genera, families, orders and other categories of bacteria 513****Index 529**
