

Franz M. Wuketits
Christoph Antweiler (Eds.)

Handbook of Evolution

Volume 1
The Evolution of Human Societies
and Cultures

 WILEY-VCH

Contents

Preface V

List of Contributors XI

- 1 **The Human Adaptation for Culture 1**
 Michael Tomasello
 - 1.1 Introduction 1
 - 1.2 Primate and Human Cognition 3
 - 1.3 The Ontogeny of Human Cultural Learning 5
 - 1.3.1 Joint Attention 5
 - 1.3.2 Imitative Learning 6
 - 1.3.3 Linguistic Symbols and Cognitive Representation 8
 - 1.4 Nonhuman Primate Culture 10
 - 1.4.1 Japanese Macaque Potato Washing 11
 - 1.4.2 Chimpanzee Tool Use 12
 - 1.4.3 Chimpanzee Gestural Communication 13
 - 1.4.4 Nonhuman Primate Social Learning and Social Cognition 15
 - 1.4.5 Enculturated Apes 16
 - 1.5 Conclusions 18
 - 1.6 References 19

- 2 **Cognitive Evolution 25**
 Olaf Diettrich
 - 2.1 Introduction 25
 - 2.2 The Equivalence Postulate 27
 - 2.3 Our Inborn World View 29
 - 2.3.1 Induction 30
 - 2.3.2 Reality 32
 - 2.3.3 The Conservation of Identity 33
 - 2.3.4 The 3D Structure of Visual Perception 33
 - 2.4 The Cognitive Operator Theory 35

2.5	The Operational Definitions of Space, Time, and Causality	37
2.5.1	Space	37
2.5.2	The Arrow of Time	38
2.5.3	Causality	39
2.6	Induction and the Compressibility of Observational and Theoretical Terms	40
2.7	Communication, Meaning, and the Compressibility of Semantic Terms	42
2.8	Extensions	45
2.8.1	Physical Extensions of Perceptions and the Notion of Reality	45
2.8.2	Algorithmic Extensions of Mathematical Thinking	48
2.9	Action, Perception, and the Role of 'Cyclic Variables' in Cognitive Evolution	53
2.10	Adaptation and Assimilation vs. Action and Perception	56
2.11	Epistemological Autoreproduction	59
2.12	Is Cultural/Scientific Evolution Really Lamarckian?	62
2.13	Physical and Social Problem-Solving in Cognitive Evolution	65
2.14	Summary	69
2.15	References	72
3	Evolution, Language, and the Construction of Culture	77
	<i>Harald Haarmann</i>	
3.1	Introduction	77
3.2	Identification through Language and its Impact on Culture Processes	79
3.3	Variation and Variability: The Organizational Principle Par Excellence in Processes of Evolution	82
3.4	Variation 1: Language and the Evolution of Communicational Skills	85
3.5	Variation 2: Language and the Evolution of Linguistic Structures	88
3.6	Variation 3: Language and the Evolution of Functional Variety	96
3.7	Variation 4: Languages and their Genetic Affiliations	101
3.8	Variation 5: Language Evolution and Linguistic Diversity	108
3.9	Variation 6: Globalization and the Future of Language Evolution	110
3.10	References	115
4	Social Evolution	121
	<i>Peter Meyer</i>	
4.1	Introduction	121
4.2	Typologies of Societies	130
4.3	Cultural Institutions in Social Evolution	137
4.4	Causes of Social Evolution	155
4.5	References	164

5	Evolution of Morality	171
	<i>Camilo J. Cela-Conde and Francisco J. Ayala</i>	
5.1	Explaining Moral Behavior	171
5.2	Deep Capacities	172
5.3	Sociobiological Models of Altruism	174
5.4	Kin Selection: Genetic Altruism and Moral Altruism	176
5.5	An Evolutionary Model of Moral Behavior – Interpretation	177
5.6	Early Moral Behavior	179
5.7	Gene–Culture Coevolution	181
5.8	Group Selection Reborn	183
5.9	References	187
6	The Evolution of Politics	191
	<i>Peter A. Corning</i>	
6.1	Introduction	191
6.2	Defining Politics	192
6.2.1	The Idealist Model	192
6.2.2	The Realist Model	194
6.2.3	The Ethological Model	196
6.2.4	The Cybernetic Model	199
6.3	Theories of Politics	202
6.3.1	Human (and Animal) Nature in Politics	202
6.3.2	Neo-Darwinism, Sociobiology, and Political Theory	204
6.3.3	The Synergism Hypothesis	209
6.3.4	Explaining Political Evolution	213
6.3.5	Explaining Political Devolution	216
6.4	The Evolution of Political Systems	220
6.4.1	Animal Politics	220
6.4.2	The Evolution of the ‘Political Animal’ – A Synopsis	223
6.4.2.1	The Rise of the Australopithecines	223
6.4.2.2	Enter Homo Erectus	226
6.4.2.3	The Emergence of Homo Sapiens	228
6.4.3	The Evolution of Complex Societies	230
6.4.3.1	Prime Mover Theories	230
6.4.3.2	The Case for the Synergism Hypothesis	235
6.5	The Future of Politics	240
6.6	References	241
7	Evolution of Economics	253
	<i>John M. Gowdy</i>	
7.1	Introduction: Economics and Biology	253
7.2	The Evolution of the Human Economy	255
7.2.1	Hunter–Gatherers: Humanity’s First Two Million Years	256

7.2.2	The First Divide: The Rise of Agriculture	258
7.2.2.1	Intensification of Production and Environmental Decline: The Tehuacán Valley	259
7.2.2.2	Intensification of Production and Environmental Decline: Easter Island	262
7.2.3	The Second Divide: The Rise of Industrial Society	263
7.2.3.1	Intensification of Production and Environmental Decline: Nauru	265
7.3	Theories of the Evolution of the Industrial Economy	266
7.4	Economic Man and Economic Change	269
7.4.1	Methodological Individualism	270
7.4.2	Commensurability of Wants	272
7.4.3	Marginal Valuation	272
7.4.4	Consumer Sovereignty and International Trade	273
7.4.5	The Evolutionary Roots of Economic Man	274
7.5	Contemporary Evolutionary Economics	275
7.6	Beyond Methodological Individualism in Biology and Economics	278
7.6.1	Beyond the Selfish Gene	278
7.6.2	The Evolution of Cooperation and Multilevel Selection	280
7.6.3	Social Cognition and Economic Theory	281
7.6.4	Evolutionary Game Theory	283
7.6.5	Cooperation as Evolutionary Progress	284
7.7	Coevolution, Evolutionary Theory, and Economic Policy	286
7.8	References	289

8 The Evolution of Scientific Method 299

Erhard Oeser

8.1	Introduction	299
8.2	Historical Background	300
8.3	Objective Scientific Knowledge as a Break with the Ratiomorphic Past	304
8.4	The Systematic Relationship of Empirical–Evolutionary Epistemology and Meta-Empirical or Pure ‘Transcendental’ Epistemology	307
8.5	Information and Knowledge	309
8.6	Science as an Evolutionary Information System	321
8.7	The ‘Law of Three Stages’ of the Evolution of Method	324
8.8	References	330
