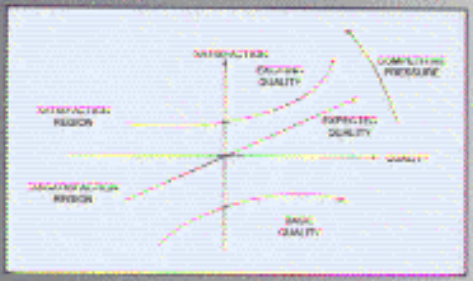
Quality and Reliability/60

Quality Engineering Handbook

Second Edition



Thomas Pyzdek

edited by
Paul A. Keller

Contents

Preface and acknowledgements		*v*
I	**Management and leadership in quality engineering**	1
	A Professional conduct and ASQ Code of Ethics	1
	B Management systems for improving quality	3
	C Leadership principles and techniques	63
	D Facilitation principles and techniques	76
	E Training	91
	F Cost of quality	107
	G Quality philosophies and approaches (e.g., Juran, Deming, Taguchi, Ishikawa)	120
	H Customer relations, expectations, needs, and satisfaction	132
	I Supplier relations and management methodologies	160
II	**Quality systems development, implementation, and verification**	173
	A Elements of a quality system	173
	B Documentation systems	191
	C Domestic and international standards and specifications	196
	D Quality audits	203
III	**Planning, controlling, and assuring product and process quality**	217
	A Processes for planning product and service development	217
	B Material control	231
	C Acceptance sampling	242
	D Measurement systems	256

IV Reliability and risk management 295
A Terms and definitions 295
B Reliability life characteristic concepts 296
C Design of systems for reliability 297
D Reliability and maintainability 302
E Reliability failure analysis and reporting 324
F Reliability, safety, hazard assessment tools 334

V Problem solving and quality improvement 361
A Approaches 361
B Management and planning tools 376
C Quality tools 387
D Corrective action 413
E Preventive action 414
F Overcoming barriers to quality improvement 418

VI Quantitative methods 427
A Concepts of probability and statistics 427
B Collecting and summarizing data 438
C Properties and applications of probability distributions 448
D Statistical decision-making 465
E Measuring and modeling relationships between variables 481
F Designing experiments 507
G Statistical Process Control (SPC) 539
H Analyzing process capability 614

Appendix
1—Quality Engineer Certification (CQE) Body of Knowledge 627
2—Quality auditing terminology 638
3—Glossary of basic statistical terms 647
4—Area under the standard normal curve 653
5—Critical values of the *t*-distribution 656
6—Chi-square distribution 658
7—*F* distribution (α=1%) 661
8—*F* distribution (α=5%) 663
9—Poisson probability sums 665
10—Tolerance interval factors 668
11—Durbin-Watson test bounds 671
12—*y* factors for computing AOQL 674
13—Control chart constants 675
14—Control chart equations 677
15—Mil-Std-45662 military standard: calibration system requirements 679
16—Table of d_2^* values 687
17—Power functions for ANOVA 689
18—Factors for short run control charts 694
19—Significant number of consecutive highest or lowest values from one stream of a multiple-stream process 696
20—Beta table: values of reliability 697
