<i>About the Authors</i>xi
<i>About the Technical Reviewer</i>xiii
<i>Acknowledgments</i>xv
<i>Introduction</i>xvii

Part One Fundamentals

1

Chapter 1 Networks and Protocols.....

3

Circuits vs. Packets3

Internetworking4

Ethernets6

Ethernet Frames7

Addressing8

Internet Protocol17

User Datagram Protocol25

Transmission Control Protocol27

The Client-Server Model31

The Domain Name System33

Summary39

Chapter 2 Functions.....

41

What Is a Socket?41

Using Sockets43

Summary63

Chapter 3	Socket Programming	65
	<i>User Datagram Protocol</i>	65
	<i>File Transfer</i>	73
	<i>Error Handling</i>	83
	<i>Summary</i>	84
Chapter 4	Protocols, Sessions, and State	85
	<i>State vs. Stateless</i>	85
	<i>Methods for Maintaining State</i>	87
	<i>Summary</i>	96
Part Two	Design and Architecture	97
Chapter 5	Client-Server Architecture	99
	<i>Client Test Program</i>	99
	<i>Multiplexing</i>	102
	<i>Forking</i>	108
	<i>Multithreading</i>	118
	<i>Combining Preforking and Prethreading</i>	128
	<i>Which Method Should You Choose?</i>	130
	<i>Dealing with Large Amounts of Data</i>	130
	<i>Summary</i>	135
Chapter 6	Implementing Custom Protocols	137
	<i>What Is a Protocol?</i>	137
	<i>Designing a Custom Protocol</i>	138
	<i>Our Chat Protocol</i>	142
	<i>Protocol Registration</i>	150
	<i>Summary</i>	153

Chapter 7	Design Decisions	155
	TCP vs. UDP	155
	Application Protocol Choices	157
	Client-Server Architecture	158
	Client-Side Considerations	161
	Server-Side Considerations	162
	Summary	172
Chapter 8	Debugging and Development Cycle	173
	Tools	173
	Chicken or the Egg	177
	Debugging	178
	Defensive Programming	179
	Summary	183
Chapter 9	Case Study: A Networked Application ...	185
	The Server	185
	The Client	201
	Recommendations for Improvements	226
	Summary	227
	Part Three Security	229
Chapter 10	Securing Network Communication	231
	Tunneling	232
	Public Key Infrastructure	235
	Secure Network Programming Using OpenSSL	242
	Summary	260

Chapter 11 Authentication and Data Signing	261
<i>The Old Scenario</i>	261
<i>The Present-Day Scenario</i>	262
<i>The PAM Library</i>	263
<i>Public Key Authentication</i>	268
<i>Single Sign-on</i>	278
<i>Summary</i>	279
Chapter 12 Common Security Problems	281
<i>Common Attacks</i>	281
<i>Buffer Overflow</i>	282
<i>Secure Coding Practices</i>	282
<i>Tools of the Trade</i>	297
<i>Summary</i>	299
Chapter 13 Case Study: A Secure Networked Application	301
<i>The Necessary Decisions</i>	301
<i>Code Design and Layout</i>	303
<i>The Code</i>	304
<i>Analysis</i>	335
<i>Summary</i>	339
Appendix IPv6	341
<i>IPv6 Addressing</i>	342
<i>IPv6 and Linux</i>	344
<i>Porting to IPv6</i>	345
<i>Future Enhancements</i>	354
<i>Summary</i>	358
Index	361
