

"Sobell's books are awesome. I first learned UNIX from *A Practical Guide to the UNIX System*."

Elie Guigley, best-selling author of
UNIX® Shell by Example and Perl by Example

A Practical Guide to Red Hat® Linux®

***Fedora™ Core and
Red Hat Enterprise Linux***

SECOND EDITION

- **Simply the best book** on Fedora Core and Red Hat Enterprise Linux!
- **Step-by-step** walk-throughs for setting up Samba, Apache, sendmail, DNS, and many other Internet servers
- **Up-to-the-minute coverage**, from the 2.6 kernel to SELinux (Security Enhanced Linux)

Security tips
throughout show
you how to set up
a more secure
system

Includes Full Fedora Core on 4 CDs

Mark G. Sobell

Contents

Preface xxxi

1 Welcome to Linux 1

The GNU-Linux Connection 1

 The Code Is Free 4

 Have Fun! 4

The Linux 2.6 Kernel 5

The Heritage of Linux: UNIX 5

What Is So Good About Linux? 6

 Why Linux Is Popular with Hardware Companies and Developers 7

 Linux Is Portable 7

 Standards 8

 The C Programming Language 8

Overview of Linux 9

 Linux Has a Kernel Programming Interface 9

 Linux Can Support Many Users 10

 Linux Can Run Many Tasks 10

 Linux Provides a Secure Hierarchical Filesystem 11

 The Shell: Command Interpreter and Programming Language 12

 A Large Collection of Useful Utilities 13

 Interprocess Communication 14

 System Administration 14

Additional Features of Linux 14

 GUI: Graphical User Interfaces 14

 (Inter)networking Utilities 16

 Software Development 16

Conventions Used in This Book	16
Chapter Summary	20
Exercises	20

PART I Installing Red Hat Linux 21

2 Installation Overview 23

More Information	24
Planning the Installation	24
Considerations	24
Installation Requirements	25
What Are You Installing: Fedora Core or Red Hat Enterprise Linux?	26
Installing a Fresh Copy or Upgrading an Existing Red Hat System?	26
Types of Installations (<i>FEDORA</i>)	27
Graphical or Textual Installation?	27
Setting Up the Hard Disk	27
RAID	31
LVM (Logical Volume Manager)	32
How the Installation Works	32
The Medium: Where Is the Source Data?	34
Formats	34
Sources	34
Downloading, Burning, and Installing a CD Set (<i>FEDORA</i>)	35
Finding a Site to Download From	36
Finding the Right Files and Downloading Them	36
Using BitTorrent to Download the ISO Image Files	38
Checking the Files	38
Burning the CDs	39
Rescue CD	39
Collecting Information About the System	40
Chapter Summary	41
Exercises	42
Advanced Exercises	42

3 Step-by-Step Installation 43

Installing Red Hat Linux	43
Booting the System: The boot: Prompt	44
Boot Commands	44
The Anaconda Installer	46
When You Reboot	52
Initializing Databases	52

Installation Tasks	53
Using Disk Druid to Partition the Disk	53
Using the Kickstart Configurator	57
fdisk: Reports On and Partitions a Hard Disk	58
Setting Up a Dual-Boot System	61
The X Window System	62
system-config-display: Configuring the Display	63
The xorg.conf and XF86Config Files	65
gdm: Displays a Graphical Login	70
More Information	71
Chapter Summary	71
Exercises	72
Advanced Exercises	72

PART II Getting Started with Red Hat Linux 73

4 Introduction to Red Hat Linux 75

Curbing Your Power: Superuser/root/Administrator Access	75
A Tour of the Red Hat Linux Desktop	76
Logging In on the System	76
Getting the Most from the Desktop	78
Using Konqueror to Manage Files, Run Programs, and Browse the Web	87
Customizing Your Desktop with the Control Center	90
Customizing the Main Panel Using the Panel Menu	92
Getting the Facts: Where to Find Documentation	94
The KDE Help Center	94
man: Displaying the System Manual	94
info: Displaying Information About Utilities	97
HOWTOs: Finding Out How Things Work	98
Getting Help with Your System	99
More About Logging In	101
The Login Screen	102
What to Do If You Cannot Log In	103
Logging Out	103
Using Virtual Consoles	103
Logging In Remotely: Terminal Emulation and telnet	104
Changing Your Password	104
switchdesk: Changing Your Default Desktop	106
Logging In from a Terminal	106
Controlling Windows II	110
Changing the Input Focus	110
Changing the Resolution of the Display	111

Understanding the Window Manager	111
Session Management	113
Chapter Summary	113
Exercises	114
Advanced Exercises	115
 5 The Linux Utilities	 117
Special Characters	118
Basic Utilities	118
ls: Lists the Names of Files	119
cat: Displays a Text File	119
rm: Deletes a File	120
less Is more: Displaying a Text File One Screen at a Time	120
hostname: Displays Your Machine Name	120
Working with Files	121
cp: Copies a File	121
mv: Changes the Name of a File	122
lpr: Prints a File	122
grep: Finds a String	123
head: Displays the Beginning of a File	124
tail: Displays the End of a File	125
sort: Displays a File in Order	125
uniq: Removes Duplicate Lines from a File	126
diff: Compares Two Files	126
file: Tests the Contents of a File	127
(Pipe): Communicates Between Processes	127
Four More Utilities	128
echo: Displays Text	128
date: Displays the Time and Date	128
script: Records a Linux Session	129
mcopy: Converts Linux Files to Windows Format	130
Compressing and Archiving a File	131
gzip: Compresses a File	131
gunzip and zcat: Decompress a File	132
bzip2: Compresses/Decompresses a File	133
tar: Packs and Unpacks Files	133
Locating Commands	135
which, whereis: Locate a Utility	135
apropos: Searches for a Keyword	137
Obtaining User and System Information	137
who: Lists Users on the System	138
finger: Lists Users on the System	138
w: Lists Users on the System	140

Communicating with Other Users	141
write: Sends a Message	141
talk: Communicates with Another User	142
mesg: Denies or Accepts Messages	144
Email	144
Tutorial: Creating and Editing a File with vim (vi)	145
Specifying a Terminal	145
Starting vim	145
Command and Input Modes	147
Entering Text	148
Getting Help	149
Ending the Editing Session	151
Chapter Summary	152
Exercises	154
Advanced Exercises	155

6 The Linux Filesystem 157

The Hierarchical Filesystem	157
Directory and Ordinary Files	158
Filenames	159
mkdir: Creates a Directory	162
The Working Directory	163
Home Directory	164
Absolute Pathnames	165
Relative Pathnames	166
Important Standard Directories and Files	167
Working with Directories	170
rmdir: Deletes a Directory	170
Pathnames	170
mv, cp: Moves or Copies a File	171
mv: Moves a Directory	172
Access Permissions	173
ls -l: Displays Permissions	173
chmod: Changes Access Permissions	174
Setuid and Setgid Permissions	175
Directory Access Permissions	176
Links	177
Hard Links	178
Symbolic Link	180
rm: Removes a Link	182
Chapter Summary	183
Exercises	184
Advanced Exercises	186

7 The Shell I 189

The Command Line 189

Syntax 190

Processing the Command Line 192

Executing the Command Line 193

Standard Input and Standard Output 194

The Screen as a File 195

The Screen/Keyboard as Standard Input and Standard Output 195

Redirection 196

Redirecting Standard Output 197

Redirecting Standard Input 198

Appending Standard Output to a File 200

/dev/null: Data Sink 201

Pipes 201

Filters 204

tee: Sends Output in Two Directions 204

Running a Program in the Background 204

Filename Generation/Pathname Expansion 207

The ? Special Character 207

The * Special Character 208

The [] Special Characters 209

Builtins 211

Chapter Summary 211

Exercises 212

Advanced Exercises 214

PART III Digging Into Red Hat Linux 215

8 Linux GUIs: X, GNOME, and KDE 217

X Window System 217

Using X 220

Window Managers 223

Using GNOME 226

Using the Nautilus File Manager 226

GNOME Utilities 232

Using KDE 237

Konqueror Browser/File Manager 237

KDE Utilities 244

Chapter Summary 247

Exercises 248

Advanced Exercises 248

9 The Shell II: The Bourne Again Shell 251

Background 252

Shell Basics 253

Assignment Statements 253

Writing a Simple Shell Script 254

Separating and Grouping Commands 256

;
; and **NEWLINE** Separate Commands 256

\ Continues a Command 256

| and && Separate Commands and Do Something Else 257

Multitasking Demonstration 258

() Groups Commands 259

Redirecting Standard Error 260

noclobber: Avoids Overwriting Files 262

Job Control 262

jobs: Lists Jobs 263

fg: Brings a Job to the Foreground 263

bg: Sends a Job to the Background 264

Manipulating the Directory Stack 265

dirs: Displays the Stack 265

pushd: Pushes a Directory on the Stack 266

popd: Pops a Directory Off the Stack 267

Processes 267

Process Structure 268

Process Identification 268

Executing a Command 270

Running a Shell Script 270

Parameters and Variables 273

User-Created Variables 275

Keyword Variables 282

Positional Parameters 287

Special Parameters 291

History 293

Editing the Command Line 295

fc: Displays, Edits, and Reexecutes Commands 295

Reexecuting an Event with the C Shell History Mechanism 298

The Readline Library 301

Alias 305

Quotation Marks: Single versus Double 305

Examples 306

Command Line Expansion 308

Order of Expansion 309

{ } Brace Expansion 309

~ Tilde Expansion 311

\$# Parameter Expansion 311

\$VARIABLE	Variable Expansion	312
\$(...)	Command Substitution	312
	Arithmetic Expansion	313
	Word Splitting	314
	Pathname Expansion	315
	Chapter Summary	317
	Exercises	320
	Advanced Exercises	322

10 Networking and the Internet 323

Types of Networks and How They Work	325
Broadcast	326
Point-to-Point	326
Switched	326
LAN: Local Area Network	327
WAN: Wide Area Network	328
Internetworking Through Gateways and Routers	328
Network Protocols	331
Host Address	334
CIDR: Classless Inter-Domain Routing	337
Hostnames	339
Communicate over a Network	341
finger: Displays Information About Remote Users	341
Sending Mail to a Remote User	342
Mailing List Servers	343
Network Utilities	343
Trusted Hosts	343
OpenSSH Tools	344
telnet: Logs in on a Remote System	344
ftp: Transfers Files over a Network	346
ping: Tests a Network Connection	346
traceroute: Traces a Route over the Internet	347
host and dig: Queries Internet Nameservers	348
whois: Looks Up Information About an Internet Site	348
Distributed Computing	350
The Client/Server Model	351
DNS: Domain Name Service	352
NIS: Network Information Service	354
NFS: Network Filesystem	354
Internet Services	354
Proxy Server	357
RPC Network Services	358
Usenet	359

WWW: World Wide Web	362
URL: Uniform Resource Locator	363
Browsers	363
Search Engine	364
Chapter Summary	364
Exercises	365
Advanced Exercises	366

}

PART IV System Administration 367

11 System Administration: Core Concepts 369

System Administrator and Superuser	371
System Administration Tools	373
Rescue Mode	377
Avoiding a Trojan Horse	378
Getting Help	379
SELinux (<i>FEDORA</i>)	379
System Operation	380
Booting the System	381
Init Scripts: Start and Stop System Services	381
Emergency Mode	386
Single-User Mode	387
Going Multiuser	387
Multiuser/Graphics Mode	388
Logging In	388
Running a Program and Logging Out	390
Bringing the System Down	390
Crash	392
Useful Utilities	393
Red Hat Configuration Tools	393
Linux Utilities	396
Setting Up a Server	399
Standard Rules in Configuration Files	399
rpcinfo: Displays Information About portmap	401
The xinetd Super Server	403
Securing a Server	404
DHCP	408
nsswitch.conf: Which Service to Look at First	413
How nsswitch.conf Works	413
PAM	416
More Information	417
Configuration File, Module Type, and Control Flag	417

- Example 419
- Modifying the PAM Configuration 421
- Chapter Summary 422
- Exercises 423
- Advanced Exercises 423

12 Files, Directories, and Filesystems 425

- Important Files and Directories 425
- File Types 436
 - Ordinary Files, Directories, Links, and Inodes 436
 - Special Files 437
- Filesystems 440
 - mount: Mounts a Filesystem 442
 - umount: Unmounts a Filesystem 445
 - fstab: Keeps Track of Filesystems 445
 - fsck: Checks Filesystem Integrity 447
 - tune2fs: Changes Filesystem Parameters 447
 - RAID Filesystem 449
- Chapter Summary 450
- Exercises 450
- Advanced Exercises 451

13 Downloading and Installing Software 453

- system-config-packages: Adds and Removes Software Packages 453
- rpm: Red Hat Package Manager 455
 - Querying Packages and Files 456
 - Installing, Upgrading, and Removing Packages 457
 - Installing a Linux Kernel Binary 458
- Installing Non-rpm Software 458
 - The /opt and /usr/local Directories 458
 - GNU Configure and Build System 459
- Keeping Software Up-to-Date 460
 - Bugs 461
 - Errata 461
 - Fedora, Red Hat Enterprise Linux, Red Hat Network, and up2date 462
 - Red Hat Network (RHEL) 467
- Keeping the System Up-to-Date 469
 - yum: Updates and Installs Packages 469
 - Apt: An Alternative to yum 472
 - BitTorrent 478
 - wget: Download Files Noninteractively 481
- Chapter Summary 482
- Exercises 482
- Advanced Exercises 483

14 Printing with CUPS 485

Introduction 485

Prerequisites 486

More Information 486

JumpStart I: Configuring a Local Printer Using `system-config-printer` 487

JumpStart II: Configuring a Remote Printer Using CUPS 489

Traditional UNIX Printing 492

Configuring Printers Using CUPS 493

The CUPS Web Interface 493

CUPS on the Command Line 495

Sharing CUPS Printers 499

The GNOME Print Manager 500

The KDE Printing Manager 501

Integration with Windows 502

Printing from Windows 502

Printing to Windows 504

Chapter Summary 504

Exercises 505

Advanced Exercises 505

15 Rebuilding the Linux Kernel 507

Preparing the Source Code 508

Locating the Source Code 508

Installing the Source Code 508

Read the Documentation 509

Configuring and Compiling the Linux Kernel 509

Cleaning the Source Tree 509

Configuring the Linux Kernel 510

Compiling the Linux Kernel 512

Using Loadable Kernel Modules 512

Installing the Kernel and Associated Files 513

Changing `lilo.conf` (RHEL) 513

`grub.conf` 513

Rebooting 514

Boot Loader 514

`grub`: The Linux Loader 514

`lilo`: The Linux Loader (RHEL) 516

`LOADLIN`: A DOS-Based Linux Loader 517

`dmesg`: Display Kernel Messages 517

Chapter Summary 518

Exercises 519

Advanced Exercises 519

16 Administration Tasks 521

- Configuring User and Group Accounts 521
 - system-config-users: Manages User Accounts 521
 - useradd: Adds a User Account 523
 - userdel: Removes a User Account 523
 - groupadd: Adds a Group 523
- Backing Up Files 524
 - Choosing a Backup Medium 525
 - Backup Utilities 525
 - Performing a Simple Backup 528
 - dump, restore: Back Up and Restore Filesystems 529
- Scheduling Tasks 531
 - cron and crontab: Schedule Routine Tasks 531
 - at: Runs Occasional Tasks 531
 - kcron: Schedules Tasks 532
- System Reports 532
 - vmstat: Reports Virtual Memory Statistics 533
 - top: Lists Processes Using the Most Resources 534
- Keeping Users Informed 535
- Creating Problems 536
 - Failing to Perform Regular Backups 536
 - Not Reading and Following Instructions 536
 - Failing to Ask for Help When Instructions Are Not Clear 536
 - Deleting or Mistyping a Critical File 537
- Solving Problems 537
 - Helping When a User Cannot Log In 537
 - Speeding Up the System 538
 - lsot: Finds Open Files 539
 - Keeping a Machine Log 539
 - Keeping the System Secure 540
 - Log Files and Mail for root 541
 - Monitoring Disk Usage 541
 - logrotate: Manages Log Files 543
 - Removing Unused Space from Directories 545
 - Disk Quota System 545
 - syslogd: Logs System Messages 546
- Chapter Summary 548
- Exercises 548
- Advanced Exercises 549

17 Configuring a LAN 551

- Setting Up the Hardware 551
 - Connecting the Computers 552

Gateways and Routers	553
Network Interface Card (NIC)	553
Configuring the Systems	554
system-config-network: Configuring the Hardware	555
iwconfig: Configuring a Wireless NIC	557
Setting Up Servers	557
More Information	559
Summary	559
Exercises	559
Advanced Exercises	560

PART V Using Clients and Setting Up Servers 561

18 OpenSSH: Secure Network Communication 563

Introduction	563
About OpenSSH	564
Files	564
How OpenSSH Works	566
More Information	567
OpenSSH Clients	567
Prerequisites	567
JumpStart: Using ssh and scp	567
Setup	568
ssh: Connect to and Execute Commands on a Remote System	570
scp: Copying a File from/to a Remote System	572
sftp: A Secure FTP Client	573
~/ssh/config and /etc/ssh/ssh_config Configuration Files	573
sshd: OpenSSH Server	574
Prerequisites	574
JumpStart: Starting the sshd Daemon	575
Authorized Keys: Automatic Login	575
Command Line Options	577
/etc/ssh/sshd_config Configuration File	577
Troubleshooting	578
Tunneling/Port Forwarding	579
Chapter Summary	581
Exercises	582
Advanced Exercises	582

19 FTP: Transferring Files Across a Network 583

- Introduction 583
- More Information 584
- FTP Client 585
 - Prerequisites 585
 - JumpStart: Downloading Files Using ftp 585
 - Notes 588
 - Anonymous FTP 589
 - Automatic Login 589
 - Binary versus ASCII Transfer Mode 589
 - ftp Specifics 590
- FTP Server (vsftpd) 594
 - Prerequisites 594
 - Notes 594
 - JumpStart: Starting a vsftpd Server 595
 - Testing the Setup 595
 - vsftpd.conf: Configuring vsftpd 596
- Chapter Summary 606
- Exercises 607
- Advanced Exercises 607

20 sendmail: Setting Up Mail Clients, Servers, and More 609

- Introduction 610
 - Prerequisites 610
 - More Information 611
- JumpStart I: Configuring sendmail on a Client 612
- JumpStart II: Configuring sendmail on a Server 612
- How sendmail Works 613
 - Mail logs 614
 - Aliases and Forwarding 614
 - Related Programs 616
- Configuring sendmail 617
 - The sendmail.mc and sendmail.cf Files 617
 - Other Files in /etc/mail 619
- In Addition to sendmail 622
 - SpamAssassin 622
 - Webmail 625
 - Mailing Lists 627
 - Setting Up an IMAP or POP3 Server 628
 - Setting Up KMail 629
- Authenticated Relaying 631
- Alternatives to sendmail 633
- Chapter Summary 633

Exercises	634
Advanced Exercises	634

21 NIS: Network Information Service 637

Introduction to NIS	637
How NIS Works	638
More Information	640
NIS Client Setup	640
Prerequisites	640
Notes	641
Step-by-Step	641
Test the Setup	642
yppasswd: Changing NIS Passwords	643
NIS Server Setup	645
Prerequisites	645
Notes	645
Step-by-Step	646
Testing	651
yppasswdd: NIS Password Update Daemon	651
Chapter Summary	652
Exercises	652
Advanced Exercises	653

22 NFS: Sharing Filesystems 655

Introduction	655
More Information	658
NFS Client	658
Prerequisites	658
JumpStart: Mounting a Remote Directory Hierarchy	658
mount: Mounts a Directory Hierarchy	660
Improving Performance	662
/etc/fstab: Mounts Directory Hierarchies Automatically	663
NFS Server	664
Prerequisites	664
JumpStart: system-config-nfs: Configures an NFS Server	664
Exporting a Directory Hierarchy	665
exports: Maintains the List of Exported Directory Hierarchies	670
Testing the Server Setup	670
automount: Mounting Directory Hierarchies Automatically	671
Chapter Summary	673
Exercises	673
Advanced Exercises	674

23 Samba: Integrating Linux and Windows 675

Which Version of Samba? 675

Introduction 676

About Samba 677

Prerequisites 677

More Information 677

Samba Users, User Maps, and Passwords 677

JumpStart: `system-config-samba`: Configuring a Samba Server 679

`swat`: Configuring a Samba Server 681

Manually Configuring a Samba Server 684

Parameters in the `smbd.conf` File 685

The [homes] Share: Sharing Users' Home Directories 691

Accessing Linux Shares from Windows 691

Browsing Shares 691

Mapping a Share 691

Accessing Windows Shares from Linux 692

`smbtree`: Displaying Windows Shares 692

`smbclient`: Connecting to Windows Shares 692

Browsing Windows Networks 693

`smbmount`: Mounting Windows Shares 693

Troubleshooting 694

Chapter Summary 696

Exercises 696

Advanced Exercises 697

24 DNS/BIND: Tracking Domain Names and Addresses 699

Introduction to DNS 699

Nodes, Domains, and Subdomains 701

Zones 702

Queries 703

Servers 704

DNS Database 705

DNS Query and Response 707

Reverse Name Resolution 708

About DNS 710

How DNS Works 710

Prerequisites 711

More Information 711

JumpStart I: Setting Up a DNS Cache 711

JumpStart II: `system-config-bind`: Setting Up a Domain 712

Setting Up BIND 715

`named.conf` 715

Zone Files 717

A DNS Cache	717
DNS Glue	721
TSIG (Transaction Signatures)	722
Running BIND Inside a chroot Jail	724
Troubleshooting	724
A Full-functioned Nameserver	725
A Slave Server	729
A Split Horizon Server	730
Chapter Summary	735
Exercises	735
Advanced Exercises	736
25 iptables: Setting Up a Firewall	737
How iptables Works	737
About iptables	740
More Information	740
Prerequisites	740
Notes	741
JumpStart: Using system-config-securitylevel to Build a Firewall	741
Anatomy of an iptables Command	742
Building a Set of Rules	744
Commands	744
Packet Match Criteria	745
Display Criteria	746
Match Extensions	746
Targets	748
Copying Rules to and from the Kernel	750
A Rule Set Generated by system-config-securitylevel	751
Sharing an Internet Connection Using NAT	752
Connecting Several Clients to a Single Internet Connection	753
Connecting Several Servers to a Single Internet Connection	755
Chapter Summary	756
Exercises	756
Advanced Exercises	757
26 Apache (httpd): Setting Up a Web Server	759
Introduction	760
About Apache	760
Prerequisites	760
More Information	761
Notes	762
JumpStart I: Getting Apache Up and Running	762
Modifying the httpd.conf Configuration File	762

Testing Apache	763
Putting Your Content in Place	763
JumpStart II: Setting Up Apache with system-config-httpd	764
Filesystem Layout	766
Configuration Directives	767
Directives I: Directives You May Want to Modify As You Get Started	768
Contexts and Containers	772
Directives II	776
The Red Hat <code>httpd.conf</code> File	788
Section 1: Global Environment	788
Section 2: Main Server Configuration	789
Section 3: Virtual Hosts	790
Redirects	790
Multiviews	791
Server Generated Directory Listings (Indexing)	791
VirtualHosts	791
Troubleshooting	792
Modules	793
Module List	793
<code>mod_cgi</code> and CGI Scripts	794
<code>mod_ssl</code>	795
Authentication Modules and <code>.htaccess</code>	797
Scripting Modules	798
<code>webalizer</code> : Analyzing Web Traffic	799
<code>MRTG</code> : Monitoring Traffic Loads	799
Error Codes	799
Chapter Summary	800
Exercises	801
Advanced Exercises	801

PART VI Programming 803

27 Programming Tools 805

Programming in C	805
Checking Your Compiler	806
A C Programming Example	807
Compiling and Linking a C Program	810
Using Shared Libraries	813
Fixing Broken Binaries	815
Creating Shared Libraries	816
<code>make</code> : Keeps a Set of Programs Current	816

Implied Dependencies	818
Macros	821
Debugging C Programs	823
gcc: Compiler Warning Options Find Errors in Programs	826
Symbolic Debugger	828
Threads	833
System Calls	834
strace: Traces System Calls	834
Controlling Processes	835
Accessing the Filesystem	835
Source Code Management	836
CVS: Concurrent Versions System	837
Chapter Summary	846
Exercises	847
Advanced Exercises	848

28 Programming the Bourne Again Shell 851

Control Structures	852
if...then	852
if...then...else	856
if...then...elif	858

Advanced Exercises	899

PART VII Appendixes 901

A Regular Expressions 903

- Characters 903
- Delimiters 904
- Simple Strings 904
- Special Characters 904
 - Periods 904
 - Brackets 905
 - Asterisks 906
 - Carets and Dollar Signs 906
 - Quoting Special Characters 907
- Rules 907
 - Longest Match Possible 907
 - Empty Regular Expressions 908
- Bracketing Expressions 908
- The Replacement String 908
 - Ampersand 909
 - Quoted Digit 909
- Extended Regular Expressions 909
- Appendix Summary 911

B Help 913

- Solving a Problem 913
- Finding Linux-Related Information 914
 - Documentation 915
 - Useful Linux Sites 916
 - Linux Newsgroups 917
 - Mailing Lists 917
 - Words 917
 - Software 918
 - Office Suites and Word Processors 919
- Specifying a Terminal 920

C Security 921

- Encryption 922
 - Public Key Encryption 923
 - Symmetric Key Encryption 924
 - Encryption Implementation 925
 - GnuPG/PGP 926

File Security	927
Email Security	927
MTAs (Mail Transfer Agents)	928
MUAs (Mail User Agents)	928
Network Security	928
Network Security Solutions	929
Network Security Guidelines	930
Host Security	931
Login Security	932
Remote Access Security	933
Viruses and Worms	934
Physical Security	935
Security Resources	936
Appendix Summary	940

D The Free Software Definition 943

E The Linux 2.6 Kernel 947

Native Posix Thread Library (NPTL)	947
IPSecurity (IPSec)	948
Asynchronous I/O (AIO)	948
O(1) Scheduler	949
OProfile	949
kksymoos	949
Reverse Map Virtual Memory (rmap VM)	950
HugeTLBFS (Translation Look-Aside Buffer File System)	950
Remap_file_pages	950
2.6 Network Stack Features (IGMPv3, IPv6, and Others)	951
Internet Protocol Virtual Server (IPVS)	951
Access Control Lists (ACLs)	951
4GB-4GB Memory Split: Physical Address Extension (PAE)	951
Scheduler Support for HyperThreaded CPUs	952
Block I/O (BIO) Block Layer	952
Support for > 2TB Filesystem	952
New I/O Elevators	953
Interactive Scheduler Response Tuning	953

Glossary 955
