

PRINCIPLES AND PRACTICE OF MODERN CHROMATOGRAPHIC METHODS

Kevin Robards, Paul R. Haddad, Peter E. Jackson

Contents

Preface	xi
1. Introduction and Overview	1
1.1 Introduction	2
1.2 Historical Aspects	3
1.3 Chromatographic Separation Simply Explained	8
1.4 Classification of Chromatography	9
1.4.1 Mobile phase	10
1.4.2 Technique	10
1.4.3 Development mode	15
1.4.4 Separation mechanism	16
1.4.5 Other systems of classification	23
1.5 Information and Objectives of Chromatography	23
1.5.1 Qualitative applications	24
1.5.2 Quantitative applications	25
1.5.3 Preparative applications	25
1.6 Comparison of Chromatographic Techniques	25
1.7 Obtaining Assistance	29
References	30
Bibliography	32
2. Theory of Chromatography	35
2.1 Introduction	36
2.2 Chromatographic Retention	36
2.2.1 Parameters for column techniques	37
2.2.2 Parameters for planar techniques	44
2.3 Peak Shape	45
2.4 Zone Broadening and Measures of Efficiency	49
2.4.1 Plate theory	49
2.4.2 Rate theory	53
2.4.3 Van Deemter plot	57
2.4.4 Extra-column effects in zone broadening	58
2.4.5 Other measures of separation efficiency	61
2.5 Optimizing Resolution	64
2.5.1 Maximizing resolution by optimizing partition ratio	66
2.5.2 Maximizing resolution by optimizing column efficiency	68
2.5.3 Maximizing resolution by optimizing column selectivity	68
2.6 Overall System Performance	71

References	71
Bibliography	73
3. Gas Chromatography	75
3.1 Introduction	76
3.1.1 Organization of this chapter	77
3.1.2 Sample type	77
3.2 Mobile Phases	78
3.2.1 Carrier gas purification—oxygen and moisture traps	80
3.2.2 Carrier gas regulation	81
3.3 Systems for Sample Introduction	82
3.3.1 Syringes	83
3.3.2 Septa	86
3.3.3 Sample inlet systems	87
3.4 Columns	95
3.4.1 Column materials	98
3.4.2 Column activity	99
3.4.3 Open tubular columns	101
3.5 Column Packing Materials	109
3.5.1 Gas-solid chromatography	111
3.5.2 Gas-liquid chromatography	114
3.6 Column Temperature	131
3.6.1 Temperature programming	132
3.7 Detectors	133
3.7.1 Detector specifications	134
3.7.2 Make-up gas	135
3.7.3 Common detectors used in gas chromatography	135
3.7.4 Dual detection	142
3.8 System Evaluation	143
3.8.1 Test solutions	143
3.8.2 Performance tests	145
3.9 Ancillary Techniques	148
3.9.1 Derivatization	149
3.9.2 Pyrolysis gas chromatography	154
3.9.3 Headspace gas chromatography	154
3.9.4 Multidimensional gas chromatography	156
3.9.5 High-speed gas chromatography	157
3.9.6 Coupled techniques	159
References	170
Bibliography	174
4. Planar Chromatography	179
4.1 Introduction	180
4.1.1 Paper chromatography	180
4.1.2 Thin layer chromatography	182
4.2 Why Thin Layer Chromatography?	182
4.2.1 Comparison of conventional TLC and HPTLC	183
4.2.2 Comparison of TLC with other techniques	184

4.3	Theoretical Considerations	186
4.3.1	Forced flow conditions	189
4.4	Thin Layer Plates	190
4.5	Stationary Phases	192
4.5.1	Polar inorganic materials	193
4.5.2	Non-polar inorganic materials	196
4.5.3	Non-polar bonded phases	196
4.5.4	Polar bonded phases	197
4.5.5	Other phases	198
4.5.6	Activity	198
4.6	Mobile Phases	202
4.6.1	Mobile phase optimization	202
4.7	Sample Application	208
4.8	Development Techniques	210
4.8.1	Linear development	210
4.8.2	Circular and anticircular development	210
4.8.3	Continuous and multiple development	211
4.8.4	Development chambers	213
4.8.5	Forced flow	215
4.9	Detection	216
4.9.1	Direct examination	216
4.9.2	Spray reagents	216
4.9.3	Miscellaneous	217
4.9.4	Qualitative analysis	218
4.10	Quantification	218
4.10.1	Elution techniques	218
4.10.2	In situ visual evaluation	219
4.10.3	In situ optical scanners	219
4.10.4	Other measuring systems	223
	References	224
	Bibliography	225
5.	High-performance Liquid Chromatography—Instrumentation and Techniques	227
5.1	Introduction	228
5.2	Solvent Delivery Systems	229
5.2.1	General requirements	229
5.2.2	Materials of construction	230
5.2.3	Mobile phase reservoirs	231
5.2.4	Reciprocating HPLC pumps	232
5.2.5	Other types of HPLC pump	236
5.3	Sample Introduction in HPLC	236
5.3.1	Manual injection	237
5.3.2	Automated injection	240
5.4	Column Packings and Hardware	241
5.4.1	Introduction	241
5.4.2	Column packings	241
5.4.3	Column packing methods	243

5.4.4	Column configuration and hardware	245
5.4.5	Measuring column performance	246
5.4.6	Column care and use	248
5.5	Detectors	249
5.5.1	Introduction	249
5.5.2	U.v.-visible light absorbance detectors	251
5.5.3	Fluorescence detectors	257
5.5.4	Electrochemical detection	260
5.5.5	Refractive index detectors	269
5.5.6	Conductivity detectors	272
5.5.7	Comparison of detectors	277
5.6	Gradient Elution	277
5.6.1	Introduction	277
5.6.2	Equipment for gradient elution	278
5.6.3	Gradient optimization	281
5.6.4	Gradient applications and considerations	284
5.7	Derivatization Methods	285
5.7.1	Introduction	285
5.7.2	Hardware and procedures for pre-column derivatization	287
5.7.3	Hardware and procedures for post-column derivatization	287
5.7.4	Applications of derivatization	292
5.8	Preparative Chromatography	292
5.8.1	Instrumentation for preparative chromatography	293
5.8.2	Preparative separations	293
5.8.3	Preparative applications	295
5.9	Multidimensional Liquid Chromatography	297
5.9.1	Column switching	297
5.9.2	Applications of coupled chromatography	298
	References	300
	Bibliography	301
6.	High-performance Liquid Chromatography—Separations	305
6.1	Introduction	306
6.1.1	Chromatographic separations	306
6.1.2	Organization of this chapter	307
6.2	Separation of Neutral Compounds	308
6.2.1	Normal-phase chromatography	308
6.2.2	Reversed-phase chromatography	316
6.2.3	Gel permeation chromatography	333
6.3	Techniques for Ionic and Ionizable Species	341
6.3.1	Ion-suppression chromatography	342
6.3.2	Ion-interaction chromatography	344
6.3.3	Ion-exchange chromatography	351
6.3.4	Ion chromatography	358
6.3.5	Ion-exclusion chromatography	365
6.4	Speciality Separation Modes	370
6.4.1	Hydrophobic interaction chromatography	371

6.4.2 Affinity chromatography	371
6.4.3 Complexation chromatography	374
6.4.4 Chiral chromatography	375
6.5 Choosing a Chromatographic Method	378
References	378
Bibliography	379
7. Supercritical Fluid Chromatography	381
7.1 Introduction	382
7.2 Instrumentation	384
7.2.1 Mobile phase delivery system	385
7.2.2 Injection systems	386
7.2.3 Restrictors	388
7.2.4 Detectors	389
7.3 Columns	390
7.3.1 Open tubular columns	391
7.3.2 Packed columns	392
7.4 Factors Affecting Retention	394
7.4.1 Solubilizing power	394
7.4.2 Temperature/pressure effects on solute solubility and retention	396
7.5 Mobile Phases	398
7.5.1 Single component phases	399
7.5.2 Modifiers	400
7.6 Programming Techniques	402
7.7 Areas of Application	403
References	403
Bibliography	404
8. Sample Handling in Chromatography	407
8.1 Introduction	408
8.2 Sample Collection Procedures	409
8.2.1 Sampling of particulates, aerosols and gases	410
8.3 Sample Preparation—An Overview	412
8.4 Recovery Procedures	414
8.4.1 Solvent extraction	415
8.4.2 Supercritical fluid extraction	423
8.4.3 Volatilization processes	429
8.5 Sample Clean-up Methods	433
8.5.1 Membrane techniques	433
8.5.2 Chromatography	440
8.5.3 Solid phase extraction	445
8.5.4 Chemical modification of the sample by pre-column reaction	450
8.6 Preconcentration Techniques	450
8.7 Contamination Effects	452
References	452
Bibliography	454

9. Qualitative and Quantitative Analysis	457
9.1 Introduction	458
9.1.1 Detector specifications	458
9.1.2 Classification of detectors	461
9.2 Qualitative Analysis	462
9.2.1 Retention parameters	463
9.2.2 Chemical methods	466
9.2.3 Peak trapping and off-line spectrometric methods	467
9.2.4 On-line instrumental techniques	468
9.2.5 Coupled techniques	469
9.3 Quantitative Analysis	469
9.3.1 Data acquisition and handling	470
9.3.2 Calibration procedures	479
References	489
Bibliography	489
