

Woodhead Publishing in Food Science and Technology

*Detecting
pathogens in food*

Edited by Thomas A. McMeekin

WOODHEAD PUBLISHING LIMITED

Contents

<i>Contributor contact details</i>	xi
Introduction	xv
<i>T. McMeekin, University of Tasmania</i>	
Part I General issues	1
1 Microbiological analysis and food safety management: GMP and HACCP systems	3
<i>C. de W. Blackburn, Unilever R&D Colworth, UK</i>	
1.1 Introduction	3
1.2 Food safety management systems	4
1.3 Types of testing used in GMP and HACCP systems	5
1.4 Microbiological analysis and GMP systems	7
1.5 Microbiological analysis and HACCP systems	11
1.6 Future trends	16
1.7 Sources of further information and advice	17
1.8 References	17
2 Sampling techniques	20
<i>D. Legan and M. H. Vandeven, Kraft Foods North America, USA</i>	
2.1 Introduction: common definitions	20
2.2 The purpose of sampling	23
2.3 Sampling and the problem of pathogen distribution	24
2.4 Acceptance sampling when the history of the material is not known	28

2.5	Acceptance sampling when the history of the material is known	33
2.6	Environmental sampling and tightened inspection/skip lot sampling	41
2.7	Taking samples	43
2.8	Maximizing the value of test results	45
2.9	Future trends	48
2.10	Sources of further information and advice	48
2.11	Acknowledgements	49
2.12	References	49
3	Separation and concentration of samples	52
	<i>A. Sharpe, Filtaflex Limited, Canada</i>	
3.1	Introduction: the need for separation and concentration	52
3.2	General approaches to removal, separation and detection	53
3.3	'Primary' microbial removal methods	55
3.4	Separation and concentration of cells once they have been removed	59
3.5	Future trends	62
3.6	References	64
4	Validating detection techniques	69
	<i>J. Debevere and M. Uyttendaele, University of Ghent, Belgium</i>	
4.1	Introduction	69
4.2	Definition of performance characteristics	70
4.3	Validation protocols	75
4.4	The application of validation schemes: immunological methods	81
4.5	The application of validation schemes: molecular methods ..	84
4.6	The use of validated methods in accredited laboratories	86
4.7	Future trends	88
4.8	Sources of further information and advice	89
4.9	References	90
5	Quality assurance of laboratory performance	93
	<i>R. Wood, Food Standards Agency, UK and J. E. L. Corry, University of Bristol, UK</i>	
5.1	Introduction	93
5.2	Legislation and codes of practice	94
5.3	Legislation in the EU	95
5.4	The Codex Alimentarius Commission	97
5.5	The UK Food Standards Agency	98
5.6	Quality assurance requirements: accreditation	99
5.7	Internal quality control (IQC)	100
5.8	Proficiency testing	104

5.9	Quality assurance requirements: analytical methods	106
5.10	Criteria for valid methods of analysis	110
5.11	Method validation through proficiency testing	112
5.12	Measurement uncertainty for the microbiologist	112
5.13	Future trends	113
5.14	References	113
5.15	Appendix: The ISO/IUPAC/AOAC International Harmonised Protocol for Proficiency Testing of Analytical Laboratories	115
Part II	Particular techniques	121
6	Culture methods	123
	<i>P. Stephens, Oxoid Ltd, UK</i>	
6.1	Introduction	123
6.2	Culture medium design	123
6.3	Culture method design	129
6.4	Examples of qualitative methods	133
6.5	Examples of commercial kits	137
6.6	Future trends	140
6.7	Further reading	141
6.8	References	142
7	Electrical methods	147
	<i>D. M. Gibson, BIODON International, UK</i>	
7.1	Introduction: principles	147
7.2	Instruments	149
7.3	Data presentation	150
7.4	Pathogen assays: introduction	151
7.5	Assays for <i>Salmonella</i>	152
7.6	Assays for <i>Enterobacteriaceae</i> , <i>Escherichia coli</i> and coliforms	156
7.7	Assays for other pathogens	159
7.8	Accreditation of electrical methods	161
7.9	Conclusion and future trends	162
7.10	References	162
8	ATP bioluminescence	165
	<i>M. Griffiths and L. Brovko, Canadian Research Institute for Food Safety</i>	
8.1	Introduction	165
8.2	Principles of ATP bioluminescent assay	165
8.3	Assay for testing the total bacterial count of food products ..	167
8.4	The use of assays for particular foods	168
8.5	The use of assays for hygiene monitoring	171

8.6	The use of assays to detect particular pathogens	174
8.7	Instrumentation	178
8.8	References	180
9	Microscopy techniques: DEFT and flow cytometry	186
	<i>R. Raybourne and M. Tortorello, US Food and Drug Administration</i>	
9.1	Introduction	186
9.2	Stains, fluorochromes and probes	188
9.3	Microscopy	192
9.4	The direct epifluorescent filter technique (DEFT)	196
9.5	Flow cytometry	199
9.6	Comparing detection techniques and future trends	209
9.7	Sources of further information and advice	210
9.8	References	211
10	Immunological techniques: immunochromatography, enzyme linked immunofluorescent assays and agglutination techniques	217
	<i>C. L. Baylis, Campden and Chorleywood Food Research Association, UK</i>	
10.1	Introduction	217
10.2	Immunochromatography: lateral flow devices	220
10.3	Enzyme linked fluorescent assays (ELFA)	225
10.4	Agglutination tests	228
10.5	Future trends	235
10.6	Sources of further information and advice	236
10.7	References	237
11	Immunological techniques: ELISA	241
	<i>J. McCarthy, Unilever R&D Colworth, UK</i>	
11.1	Introduction	241
11.2	The basic principles of an ELISA	242
11.3	ELISA formats	243
11.4	Commercially-available ELISAs	245
11.5	Advantages and disadvantages in using ELISAs	252
11.6	Future trends	254
11.7	References and further reading	256
	Appendix Manufacturers of ELISA kits	258
12	Genetic techniques: PCR, NASBA, hybridisation and microarrays	259
	<i>K. Sanderson and D. Nichols, University of Tasmania, Australia</i>	
12.1	Introduction: the polymerase chain reaction (PCR)	259
12.2	Nucleic acid sequence-based amplification (NASBA), hybridisation and microarrays	261
12.3	Key principles	262

12.4	Applications for particular pathogens and foods	263
12.5	Advantages and disadvantages	265
12.6	Examples of commercial kits	267
12.7	Future trends	268
12.8	References	268
13	Genetic techniques: molecular subtyping methods	271
	<i>C. Fitzgerald and B. Swaminathan, Centers for Disease Control and Prevention, USA and A. Sails, Newcastle General Hospital, UK</i>	
13.1	Introduction	271
13.2	Approaches to molecular subtyping	273
13.3	PCR-based techniques	278
13.4	AFLP analysis and emerging methods	281
13.5	Standardized molecular subtyping of pathogens	285
13.6	Interpreting molecular subtyping data	287
13.7	The future of molecular subtyping	290
13.8	Sources of further information and advice	291
13.9	References	292
14	New biosensors for microbiological analysis of food	294
	<i>G. Volpe and G. Palleschi, University of Rome, Italy and A. Turner, Cranfield University, UK</i>	
14.1	Introduction	294
14.2	Transducers used in biosensors and immunosensors	296
14.3	Biosensors used to detect <i>Salmonella</i>	304
14.4	Biosensors used to detect <i>Staphylococcus aureus</i>	311
14.5	Biosensors used to detect <i>Escherichia coli</i>	312
14.6	Biosensors used to detect algal toxins and aflatoxin	318
14.7	DNA biosensors	323
14.8	Detecting microbial spoilage	325
14.9	Future trends	326
14.10	References	326
15	The use of applied systematics to identify foodborne pathogens	332
	<i>M. Uyttendaele and J. Debevere, Ghent University, Belgium</i>	
15.1	Introduction	332
15.2	Identification based on morphological, physiological and biochemical characteristics	333
15.3	Identification based on chemotaxonomy	338
15.4	Identification based on genetic information	342
15.5	Applications: identifying the genus <i>Aeromonas</i>	346
15.6	Applications: identifying the genus <i>Bacillus</i>	347
15.7	Applications: identifying the genus <i>Campylobacter</i>	350
15.8	Detecting virulence factors in foodborne pathogenic bacteria	351
15.9	Future trends	353
