

INTERNATIONAL EDITION

Communication Systems

ANALYSIS AND DESIGN

HAROLD P. E. STERN • SAMY A. MAHMOUD

Contents

Preface

xiii

Acknowledgments

xvii

Chapter 1 Introduction 1

- 1.1 Components of a Communication System 1
- 1.2 An Overview of Trade-Offs in Communication System Design Problems 4

Chapter 2 Frequency Domain Analysis 6

- 2.1 Why Study Frequency Domain Analysis? 6
- 2.2 The Fourier Series 13
 - 2.2.1 Trigonometric Form of the Fourier Series 13
 - 2.2.2 Other Forms of the Fourier Series 18
- 2.3 Representing Power in the Frequency Domain 38
 - 2.3.1 The One-Sided Average Normalized Power Spectrum 41
 - 2.3.2 Formally Defining the Term “Bandwidth” 48
 - 2.3.3 The Two-Sided Average Normalized Power Spectrum 48
- 2.4 The Fourier Transform 52
- 2.5 Normalized Energy Spectral Density 60
- 2.6 Properties of the Fourier Transform 65
- 2.7 Using the Unit Impulse Function to Represent Discrete Frequency Components as Densities 68
- Problems 69

Chapter 3 Digital Baseband Modulation Techniques 75

- 3.1 Goals in Communication System Design 75
- 3.2 Baseband Modulation Using Rectangular Pulses and Binary Pulse Amplitude Modulation 76

vii

3.3	Pulse Shaping to Improve Spectral Efficiency	89
3.3.1	The Sinc-Shaped Pulse	89
3.3.2	The Raised Cosine Pulse (Damped Sinc-Shaped Pulse)	101
3.4	Building a Baseband Transmitter Problems	111 115
Chapter 4	Receiver Design (and Stochastic Mathematics, Part I)	123
4.1	Developing a Simple Pulse Amplitude Modulation Receiver	123
4.1.1	Establishing an Expression for Probability of Bit Error	124
4.1.2	Stochastic Mathematics—Part I (Random Variables)	127
4.1.3	Examining Thermal Noise	132
4.1.4	The Gaussian Probability Density Function	137
4.1.5	Simplifying the Expression for Probability of Bit Error	144
4.2	Building the Optimal Receiver (The Matched Filter or Correlation Receiver)	149
4.2.1	Basic Structure for the Optimal Receiver	149
4.2.2	Implications of Employing Optimum Processing	153
4.2.3	A Graphical Interpretation of Probability of Bit Error for the Optimal Receiver	156
4.2.4	Designing the Correlation Receiver for More General Signals	162
4.3	Synchronization	172
4.3.1	Basic Structure of Continuous-Time Phase Locked Loops	173
4.3.2	Analysis of the PLL with Linearized Dynamics	173
4.3.3	Frequency Synthesizers	178
4.3.4	Timing Recovery	181
4.3.5	Further Reading on Synchronization	189
4.4	Equalization	190
4.4.1	Intersymbol Interference	192
4.4.2	Linear Transversal Equalizers	196
4.4.3	Least-Mean-Square Equalizers	198
4.4.4	Other Types of Equalizers	199
4.4.5	Further Reading on Equalization	199
4.5	Multi-Level PAM (M-ary PAM) Problems	200 207
Chapter 5	Digital Bandpass Modulation and Demodulation Techniques (and Stochastic Mathematics, Part II)	211
5.1	Binary Amplitude Shift Keying	212
5.2	Other Binary Bandpass Modulation Techniques	219
5.2.1	Binary Frequency Shift Keying	219
5.2.2	Binary Phase Shift Keying	221
5.2.3	Calculating Average Normalized Power Spectral Density for Binary FSK and Binary PSK	222

5.3	Coherent Demodulation of Bandpass Signals	225
5.3.1	Developing a Coherent PSK Receiver	227
5.3.2	Developing a Coherent ASK Receiver	230
5.3.3	Developing a Coherent FSK Receiver	232
5.3.4	Comparing Coherent PSK, FSK, and ASK	235
5.4	Stochastic Mathematics—Part II (Random Processes)	236
5.4.1	Random Processes	238
5.4.2	The Wiener–Khinchine Theorem	245
5.4.3	Ergodicity	252
5.5	Noncoherent Receivers for ASK and FSK	253
5.5.1	The Envelope Detector	254
5.5.2	Noncoherent Demodulation of ASK	255
5.5.3	Noncoherent Demodulation of FSK	255
5.5.4	Performance of Noncoherent ASK and FSK Receivers	256
5.6	Differential (Noncoherent) PSK	267
5.6.1	Demodulation of Binary DPSK	268
5.6.2	Probability of Bit Error for a DPSK Receiver	270
5.7	A Comparison of Binary Bandpass Systems	271
5.8	M-ary Bandpass Techniques	274
5.8.1	Quaternary Phase Shift Keying	274
5.8.2	Differential Quaternary Phase Shift Keying	284
5.8.3	M-ary Phase Shift Keying	286
5.8.4	M-ary Frequency Shift Keying	292
5.8.5	Multiparameter M-ary Bandpass Signaling	298
	Problems	301
Chapter 6	Analog Modulation and Demodulation	306
6.1	Transmitting an Amplitude Modulated Signal	306
6.2	Coherent Demodulation of AM Signals	309
6.3	Noncoherent Demodulation of AM Signals	315
6.4	Single Sideband and Vestigial Sideband AM systems	326
6.5	Frequency Modulation and Phase Modulation	334
6.6	Generating and Demodulating FM and PM Signals	343
6.6.1	FM and PM Modulators	343
6.6.2	FM and PM Demodulators	345
6.6.3	Noise in FM and PM Systems	347
6.7	A Comparison of Analog Modulation Techniques	355
	Problems	357
Chapter 7	Multiplexing Techniques	362
7.1	Time Division Multiplexing	364
7.2	Frequency Division Multiplexing	368
7.3	Code Division Multiplexing and Spread Spectrum	370
7.3.1	Direct Sequence Spread Spectrum	371
7.3.2	Frequency-Hopping Spread Spectrum	381
	Problems	385

Chapter 8	Analog-to-Digital and Digital-to-Analog Conversion	388
8.1	Sampling and Quantizing	390
8.1.1	Sampling Baseband Analog Signals	392
8.1.2	Practical Considerations in Baseband Sampling	397
8.1.3	Sampling Bandpass Analog Signals	399
8.1.4	The Quantizing Process	400
8.2	Differential Pulse Coded Modulation	407
8.3	Delta Modulation and Continuously Variable Slope Delta Modulation	411
8.3.1	Delta Modulation	411
8.3.2	Continuously Variable Slope Delta Modulation	415
8.4	Further Reading on Analog-to-Digital and Digital-to-Analog Conversion	417
	Problems	417
Chapter 9	Fundamentals of Information Theory, Data Compression, and Image Compression	421
9.1	Information Content, Entropy, and Information Rate of Independent Sources	421
9.2	Variable-Length, Self-Punctuating Coding for Data Compression	424
9.2.1	Prefix Coding and the Tree Diagram	426
9.2.2	Huffman Coding	431
9.3	Sources with Dependent Messages	439
9.3.1	Static Dictionary Encoding	439
9.3.2	LZW Compression—an Example of Dynamic Dictionary Encoding	442
9.4	Still-Image Compression	444
9.4.1	Facsimile	444
9.4.2	Monochromatic Gray Scale Images	447
9.4.3	Color Images (the DCT and JPEG)	447
9.5	Moving-Image Compression	450
	Problems	454
Chapter 10	Basics of Error Control Coding	458
10.1	Channel Capacity	460
10.2	Field Theory and Modulo-2 Operators	461
10.2.1	Galois Field of Order 2	461
10.2.2	Matrix Representation and Manipulation	463
10.3	Hamming Codes	464
10.4	A Geometric Interpretation of Error Control Coding	472
10.5	Cyclic Codes	481
10.5.1	Cyclic Redundancy Check Codes	485
10.5.2	Bose Chaudhuri Hocquenghem Codes	487

10.6	Hybrid FEC/ARQ Codes	488	
10.7	Correcting Burst Errors	489	
	10.7.1 Interleaving	489	
	10.7.2 Reed–Solomon Codes	490	
10.8	Convolutional Codes and Viterbi Decoding		490
	10.8.1 Convolutional Encoding	490	
	10.8.2 Creating a Trellis	496	
	10.8.3 Decoding and the Viterbi Algorithm		497
	Problems	506	
	References	509	
	Answers to Selected Problems	515	
	Index	519
