

INTERNATIONAL EDITION

electronic communication techniques

fifth edition

Paul H. Young

Contents

1	Radio Frequency Amplifiers	1
	Chapter Preview	1
	Introduction	1
1-1	Impedance Review	6
	<i>Series Circuit Impedance</i>	7
1-2	Series Resonance	8
1-3	Circuit Q and Bandwidth	9
1-4	Parallel Resonance	11
	<i>Nonideal Parallel Resonant Circuits</i>	13
1-5	Small-Signal RF Amplifier Analysis	16
	<i>Gain in Decibels</i>	16
1-6	Small-Signal RF Amplifier Design	20
1-7	Coupling Tuned Circuits	24
1-8	Nonideal Transformer Coupling	27
	<i>Transformer Loading</i>	30
	<i>Measuring the Coupling Coefficient</i>	33
1-9	Double-Tuned Circuits	33
1-10	Laplace Transforms	37
	<i>Introduction</i>	37
	<i>Use of the Table of Transform Pairs</i>	42
	<i>Circuit Impedance and the Transfer Function</i>	42
	Problems	44
	Computer Analysis	48
2	Oscillators	57
	Chapter Preview	57
	Introduction	58
2-1	Hartley Oscillator Circuit Analysis	61
2-2	Colpitts Oscillator	63

2-3 Clapp Oscillator 66

2-4 Tuned-Input/Tuned-Output Oscillator 67

2-5 Untuned Oscillators 68

 RC Phase-Shift Oscillator 68

 Wien Bridge Oscillator 69

 Astable Multivibrator 70

2-6 Oscillator Stability and Spectral Purity 71

 Temperature Coefficient 72

 Temperature Stability of Oscillators 72

 Improving the Frequency Stability of Oscillators 73

2-7 Crystals and Crystal Oscillators 74

 Crystal Cuts (Y, AT, and BT) 74

 Equivalent Circuit, Impedance, and Q 75

 Crystal Oscillators 76

 Harmonic Operation 78

2-8 Pierce Crystal Oscillator 78

 Problems 79

 Computer Analysis 83

3 Signal Spectra 86

Chapter Preview 86

Introduction 87

3-1 Fourier Series and Signal Analysis 87

 Even and Odd Functions 89

 Fourier Series: Complex Exponential Form 94

 Fourier Series of Other Waveforms 95

3-2 Fourier Transforms 97

3-3 Effect of Filters on Signals 100

3-4 Harmonic and Phase Distortion 104

 Total Harmonic Distortion 104

3-5 Nondeterministic Signals 105

 Problems 106

 Computer Analysis 108

4 Elements of Noise 115

Chapter Preview 115

Introduction 116

4-1 System Noise Sources 116

 Thermal Noise 116

 Shot Noise 117

 Flicker (1/f) Noise 119

 Burst Noise 119

4-2 Noise Spectral Density and Circuit Calculations 119

4-3 Noise and Feedback 123

4-4 System Noise Figure 124

4-5	Noise Temperature	125	
4-6	Noise Bandwidth	126	
4-7	Correlation and Noise	127	
	Problems	131	
	Computer Analysis	133	
5	Modulation and Amplitude-Modulation Systems		138
	Chapter Preview	138	
	Introduction	139	
5-1	Voice Transmission and Multiplexing	139	
5-2	Modulation	140	
	<i>Amplitude Modulation</i>	140	
	<i>Modulation Index</i>	141	
5-3	AM Spectrum and Bandwidth	142	
5-4	Power in an AM Signal	145	
5-5	Nonsinusoidal Modulation Signals	146	
5-6	AM Demodulation	148	
	<i>Diagonal Clipping Distortion</i>	150	
	<i>Negative Peak Clipping</i>	150	
5-7	AM Receiver Systems	152	
	<i>Superheterodyne Receiver Systems</i>	152	
5-8	Superheterodyne Receivers for AM	153	
	<i>Choice of IF Frequency and Image Response</i>	154	
5-9	Receiver Gain and Sensitivity	155	
	<i>Detector Power Requirement</i>	155	
5-10	Power Level in dBm and dBW	156	
5-11	AGC and Dynamic Range	158	
	<i>Delayed AGC</i>	160	
5-12	Receiver Noise	161	
5-13	Signal-to-Noise Ratio (S/N)	162	
5-14	Derivation of the Noise Figure Equation	162	
5-15	Bandwidth Improvement	164	
5-16	Bandwidth Narrowing	167	
	Problems	167	
	Computer Analysis	170	
6	Transmitter Circuits		174
	Chapter Preview	174	
	Introduction	175	
6-1	Power Amplifiers	176	
	<i>Triode Vacuum Tube</i>	176	
	<i>Class C Power Amplifier</i>	178	
	<i>Power and Efficiency</i>	181	
6-2	Neutralization	182	

6-3	Integrated Circuit, RF Power Amplifiers	183
6-4	Impedance-Matching Networks	189
	<i>Pi-Matching Network</i>	191
	<i>Transistor and Vacuum-Tube Matching Network Equations</i>	194
6-5	AM Modulator Circuits	197
	<i>Solid-State Modulator</i>	197
	<i>Vacuum-Tube AM Modulator</i>	199
	<i>Grid Modulation</i>	200
	Problems	201
	Computer Analysis	206

7 Receiver Circuits 208

	Chapter Preview	208
	Introduction	209
7-1	Low-Noise Amplifiers (LNAs)	210
	<i>Amplifier Dynamic Range</i>	211
	<i>Third-Order Intercept Point</i>	212
7-2	Mixers	213
	<i>General Nonlinearity</i>	214
	<i>Switching or Sampling Mixers</i>	215
	<i>Other Frequency Converters</i>	216
	<i>Mixer Circuit Design</i>	218
	<i>Mixing Modulated Signals</i>	220
7-3	Tuning the Standard Broadcast Receiver	221
7-4	Filter Requirements for Interference Control and Selectivity	223
7-5	Filter Circuit Design	229
	<i>Determining the Filter Impedance Level</i>	233
	<i>Low-Pass Filter Component Values</i>	234
	<i>Bandpass Design</i>	235
7-6	IF Amplifiers	239
7-7	AGC Circuits	245
7-8	The Audio System	248
	<i>Class B Push-Pull</i>	249
7-9	Distortion and Feedback	252
	<i>Voltage-Sampled Shunt Feedback</i>	255
	<i>Voltage-Sampled Series Feedback</i>	256
	<i>Frequency Effects and Stability with Feedback</i>	258
	Problems	262
	Appendix 7A: Class A Power Amplifier Design Example	268
	Computer Analysis	271

8 Sideband Systems 286

	Chapter Preview	286
	Introduction	287

8-1	Vestigial Sideband	287
8-2	Double Sideband/Suppressed Carrier	288
8-3	Balanced Modulator	289
8-4	Product Detector	296
8-5	Phase Distortion in the Demodulation of Suppressed-Carrier Systems	296
8-6	Single-Sideband/Suppressed Carrier	298
	<i>Sideband-Filter Method</i>	298
	<i>Phase Method of SSB-SC Generation</i>	299
	<i>Single-Sideband Receiver</i>	302
8-7	Frequency-Division Multiplexing in Telephone Systems	304
8-8	Quadrature Multiplexing	307
8-9	Costas Loop for Suppressed-Carrier Demodulation	309
	Problems	311
	Computer Analysis	313

9 Frequency and Phase Modulation

315

	Chapter Preview	315
	Introduction	315
9-1	Frequency Modulation	316
	<i>Modulation Index</i>	317
	<i>Sidebands and Spectrum</i>	319
	<i>Wideband FM</i>	321
	<i>Information Bandwidth and Power</i>	325
9-2	Phase Modulation	327
	<i>Diode Modulator for PM</i>	328
	<i>Derivation of Modulator Equations</i>	330
	<i>Determining the Limits of Linearity</i>	333
	<i>Wideband PM</i>	335
	<i>Demodulation of PM</i>	335
9-3	Advantages of PM over FM	336
9-4	FM Transmitter Circuits	336
	<i>Voltage-Controlled Oscillators (VCOs)</i>	337
	<i>Integrated Circuit VCO</i>	339
	<i>FM from PM</i>	340
	<i>Reactance Modulator for FM</i>	347
	<i>Reactance Modulator Sensitivity</i>	347
	<i>Frequency Multipliers</i>	348
9-5	Frequency Stability and AFC	350
9-6	FM Receivers	354
	<i>FM Demodulators</i>	354
	<i>PLL Demodulator</i>	355
	<i>Slope Detection/FM Discriminator</i>	356
	<i>Foster-Seeley Phase-Shift Discriminator</i>	357
	<i>Ratio Detector</i>	361

	<i>Quadrature FM Detectors</i>	362
	<i>IF Amplifiers and Limiters</i>	364
9-7	Noise Performance	368
	<i>Preemphasis for FM</i>	370
9-8	Stereo FM	371
	Problems	374
	Computer Analysis	378
10	Phase-Locked Loops	385
	Chapter Preview	385
	Introduction	385
10-1	Loop Components	387
	<i>Phase Detector</i>	387
	<i>Phase Detector Gain</i>	389
	<i>Digital Phase (Timing) Comparators</i>	391
	<i>Amplifiers</i>	391
	<i>Voltage-Controlled Oscillator (VCO)</i>	391
10-2	Basic Loop Behavior	393
	<i>Locking the Loop</i>	393
	<i>Acquisition</i>	393
	<i>Locked Loop: The Tracking Mode</i>	394
	<i>Loop Gain and Static Phase Error</i>	394
	<i>Hold-In Range</i>	395
10-3	Loop Frequency Response and Bandwidth	397
	<i>Frequency Response of Individual Loop Components</i>	397
	<i>PLL System Response</i>	399
	<i>Closed-Loop Frequency Response and Bandwidth</i>	401
10-4	FM and FSK Applications of PLLs	403
10-5	Noise	404
10-6	Improving Loop Response	405
	<i>Determining Loop Stability and Dynamic Behavior Using the Bode Plot</i>	406
	<i>Phase Margin</i>	407
	<i>Damping and Undamped Natural Frequency</i>	409
	<i>Rise in Loop Frequency Response</i>	410
	<i>Switching and Settling Time</i>	413
10-7	Phase-Locked Loop Compensation	414
	<i>Lead-Lag Compensation</i>	414
10-8	Frequency Synthesizers	421
	<i>Direct Frequency Synthesizers</i>	421
	<i>Phase-Locked Synthesizers</i>	424
	<i>Translation Loops and Multiple-Loop Synthesizers</i>	426
10-9	Coherent Receivers: Phase-Locked Loop, Acquisition, and	
	<i>Pull-In Frequency Range</i>	435
	Problems	438
	Computer Analysis	443

11	Pulse and Digital Modulation	447
	Chapter Preview	447
	Introduction	448
11-1	Sampled Data and the Sampling Theorem	448
11-2	Pulse Amplitude Modulation—Natural and Flat-Top Sampling	451
	<i>Time-Division Multiplexing</i>	454
	<i>Intersymbol Interference (ISI)</i>	456
11-3	Pulse Width and Pulse Position Modulation (PWM and PPM)	457
	<i>Demodulation</i>	460
11-4	Digital Modulation	460
	<i>Pulse Code Modulation (PCM)</i>	460
	<i>Multiplexing PCM Channels</i>	462
	<i>Bandwidth Requirements</i>	462
	<i>Delta Modulation (DM)</i>	464
11-5	Quantization Noise	471
11-6	Qualitative Comparisons of Pulse and Digital Modulation Systems	471
	Problems	472
	Computer Analysis	475
12	Digital Communication Concepts	476
	Chapter Preview	476
	Communication Concepts	477
12-1	Digital Information	477
	<i>Coding</i>	477
	<i>Coding Efficiency</i>	478
12-2	Information Transfer Rate	479
12-3	Signaling (Baud) Rate	479
12-4	System Capacity	481
12-5	Bandwidth Considerations	484
	<i>Minimum Possible Bandwidth</i>	485
	<i>Pulse Shaping for Minimizing Bandwidth and Pulse Distortion</i>	486
	<i>Digital Transmission Formats</i>	487
12-6	Power in Digital Signals	489
12-7	PCM System Analysis	490
	<i>Digitizing/Encoding</i>	491
	<i>Resolution and Dynamic Range</i>	493
	<i>Quantization Noise</i>	495
	<i>Signal-to-Quantization Noise Ratio</i>	496
	<i>Companding</i>	496
12-8	PCM Telephone Circuitry	500
	<i>Digital-to-Analog Converters (DACs)</i>	501
	<i>Analog-to-Digital (A/D) Converters</i>	503
	<i>Codec</i>	507
	<i>Telephone Dialing Tones—Synthesizing and Decoding</i>	507

Problems	509
Computer Analysis	512

13 Data Communication Techniques 521

Chapter Preview	521
Introduction	521
13-1 Standard Digital Codes	522
<i>Codes and Error Control Techniques</i>	525
<i>Reed-Solomon Codes</i>	527
13-2 Error Detection	530
<i>Error Detecting and Correcting</i>	532
<i>Cyclic Redundancy Checks</i>	533
13-3 Noise and Data Errors	537
13-4 Intercomputer Communications	540
13-5 Serial-Transmission Interfacing	541
<i>UART for Asynchronous Communication</i>	542
<i>EIA and CCITT Voltage Interfacing of Computer Devices</i>	546
13-6 Carrier Systems and Modems	549
<i>Modems</i>	549
<i>Frequency-Shift Key (FSK) Modems</i>	549
<i>Automatic Retransmission Request (ARQ)</i>	550
<i>Full-Duplex, Two-Wire Line, FSK Modem</i>	551
<i>Continuous-Phase FSK and MSK</i>	552
13-7 Synchronous Communication Techniques	554
<i>Data Networks and Synchronous Transmission Protocols</i>	555
<i>Point-to-Point</i>	555
<i>Multipoint Lines</i>	556
<i>Switched Networks—Synchronous Transmissions</i>	557
<i>Packet Switching</i>	557
<i>Synchronous Protocols</i>	560
<i>Binary Synchronous Communications (Bisync)</i>	560
<i>Bit-Oriented Protocols: SDLC, HDLC, and X.25</i>	561
13-8 Open System Interconnect and ISDN	565
<i>Open System Interconnections (OSI)</i>	565
<i>Integrated Services Digital Network (ISDN)</i>	566
<i>Asynchronous Transfer Mode (ATM)</i>	568
Problems	571
Computer Analysis	574

14 Transmission Lines and Waveguides 578

Chapter Preview	578
Introduction	578
14-1 Transmission Lines	579
<i>TEM Wave Propagation</i>	581
<i>Transients and Reflections</i>	582

14-2	Sinusoidal Signals as Traveling Waves	587
	<i>Sinusoidal Signal Reflections and Standing Waves</i>	588
	<i>Slotted Line and VSWR</i>	590
14-3	Smith Chart	592
14-4	Impedance-Matching Techniques	595
14-5	S-Parameters	598
14-6	Microstrip Amplifier Design	603
	<i>Microstrip Design</i>	604
14-7	Waveguides	611
	<i>Boundary Conditions</i>	611
	<i>Waveguide Modes</i>	612
	<i>Coupling to Waveguides</i>	615
	<i>Use of Smith Chart with Waveguide Transmissions</i>	615
14-8	Directional Couplers	618
	Problems	619
	Computer Analysis	622

15 Antennas and Radiowave Propagation

627

	Chapter Preview	627
	Introduction	628
15-1	Antenna Radiation	629
	<i>Polarization</i>	629
	<i>Radiation Pattern and Power Density</i>	631
15-2	Received Power and Electric Field Strength	632
15-3	Dipole (Hertz) Antenna	632
	<i>Antenna Gain (dBi)</i>	633
15-4	Directivity, Gain, and Aperture	633
15-5	Beamwidth	634
15-6	Grounded Vertical (Marconi) Antenna	634
	<i>Counterpoise</i>	635
15-7	Television Antennas and Arrays	636
15-8	Folded Dipole	637
15-9	Turnstiles, Yagis, and Other Arrays	638
	<i>Yagi-Uda</i>	638
	<i>Log-Periodic Dipole Array</i>	640
15-10	Loop Antennas	642
15-11	Parabolic Dish Antennas	643
	<i>Conical Horn Antennas</i>	645
15-12	Wave Propagation Through Space	647
	<i>Refraction</i>	648
	<i>Diffraction</i>	648
	<i>HF Radio Waves</i>	649
	<i>Long-Distance HF Radio Transmission</i>	649
	<i>Ionosphere</i>	650
	<i>Skip Zone</i>	650
	<i>Multipath Distortion</i>	651

15-13	Power Loss in Space	652
	<i>Free-Space Attenuation and Atmospheric Absorption</i>	652
	<i>Fading and Fade Margin</i>	654
	Problems	654
	Computer Analysis	656

16 Basic Television 658

	Chapter Preview	658
	Introduction	658
16-1	Overview: Studio to Viewer	659
16-2	Frequency Allocations	660
16-3	TV Cameras	661
16-4	Scan Raster and Synchronizing Signals	662
16-5	Video Bandwidth and Resolution	664
16-6	Transmitted Video and Audio Signals	664
16-7	Black-and-White TV Receivers	665
	<i>Tuner, IFs, and Detectors</i>	665
	<i>Gated AGC</i>	667
	<i>Video Amplifiers and CRT Bias</i>	668
	<i>Sync Separator</i>	670
	<i>Vertical Deflection and Sync</i>	670
	<i>Horizontal Deflection and CRT High Voltage</i>	673
	<i>Phase-Locked Horizontal Sync</i>	675
16-8	Color Television	676
	<i>Chroma Signals</i>	678
	<i>Chroma I and Q Signals</i>	678
	<i>Color TV Receiver Circuits</i>	680
16-9	High-Definition Television	684
	<i>Video Compression Techniques</i>	687
	Problems	691

17 Digital Radio and Space Communication 693

	Chapter Preview	693
	Introduction	694
17-1	Modems and Digital Modulation Techniques	696
	<i>Phase-Shift Key (PSK)</i>	696
	<i>Demodulator</i>	698
	<i>Differential PSK</i>	699
	<i>Beyond Binary</i>	701
	<i>QPSK</i>	701
	<i>QPSK Demodulation</i>	705
	<i>Quadrature Demodulation</i>	707
	<i>Carrier Recovery</i>	708
	<i>Bit Timing Recovery</i>	709

	<i>Modems with Higher Than Four-Level PSK and QAM</i>	710
	<i>Quadrature Amplitude Modulation (QAM)</i>	711
17-2	Noise and Error Rate Performance	713
	E_b/N_0	714
	<i>Bandwidth Requirements for Digital Radio</i>	716
17-3	Space and Frequency Diversity	717
17-4	System Gain, Power, and Noise Budgets	718
	<i>Received Signal Power and System Gain</i>	719
	<i>System Threshold</i>	720
	G/T	722
17-5	Satellite Access for Global Networking	723
	<i>Satellite Systems</i>	723
	<i>Multiple-Access Techniques</i>	726
	<i>Frequency-Division Multiple Access (FDMA)</i>	727
	<i>FDMA with DAMA</i>	729
	<i>TDMA</i>	729
	<i>CDMA/Spread Spectrum</i>	731
17-6	Spread Spectrum Systems	733
	<i>Direct-Sequence</i>	734
	<i>Frequency-Hopping Spread Spectrum</i>	738
17-7	Multiple Access Cellular Systems	740
	<i>Cellular Radio</i>	741
	<i>Cellular Radio Propagation</i>	744
	<i>Other Operational Considerations</i>	746
	<i>Transmission of Digital Signals</i>	747
	E_b/N_0 and Probability of Data Errors	750
17-8	Digital Modulation in Wireless Cellular and Personal Communication Systems	752
	<i>Intersymbol Interference (ISI)</i>	753
	<i>Modulator/Demodulator Circuit Impairments</i>	755
	<i>Minimum-Shift Key Modulation</i>	757
	$\pi/4$ -DQPSK	759
17-9	RF Receiver and Transmitter System Considerations	763
	<i>Receivers</i>	764
	<i>Front-End</i>	766
	<i>Receiver Sensitivity</i>	767
	<i>Image-Rejection Mixer</i>	769
	<i>Local Oscillator Phase Noise</i>	771
	<i>Reciprocal Mixing</i>	774
	<i>Intermodulation Distortion and Dynamic Range</i>	775
	<i>Transmitters</i>	778
	<i>Modulation Phase/Amplitude Imbalance</i>	780
	<i>Threshold and Coding Gain</i>	782
17-10	RF Integrated Circuits and Transceivers for Digital Communications	783
	<i>AMPS and TDMA</i>	791
	<i>Spread Spectrum WLAN</i>	796

	<i>CDMA Transceiver</i>	800
	<i>Digital Receiver 2000</i>	802
17-11	BLUETOOTH Basics and "Wi-Fi"	805
	<i>IEEE 802.11 Technology and "Wi-Fi"</i>	810
	Problems	811
	Computer Analysis	815

18 Fiber-Optic Communication

820

	Chapter Preview	820
	Introduction	821
18-1	The Optical Fiber Communication Link	821
18-2	Light	822
18-3	Light Propagation in Glass Fibers	823
	<i>Critical Angle and Reflections</i>	823
	<i>Numerical Aperture and Reflectance</i>	824
	<i>Optical Fiber Waveguides</i>	826
	<i>Bandwidth-Distance Product</i>	828
	<i>Dispersion and Pulse Spreading</i>	828
	<i>Maximum Allowable Data Rate</i>	831
	<i>Fiber Power Losses</i>	832
18-4	Transmitter Devices and Circuits	834
	<i>Communication LEDs</i>	835
	<i>Injection Lasers</i>	836
	<i>Direct Modulation Transmitters</i>	837
	<i>External Modulators</i>	839
	<i>Fiber Amplifiers and Dispersion-Shifted Fiber</i>	840
18-5	Receiver Devices and Circuits	841
	<i>Photodiode Light Detectors</i>	841
	<i>PIN Photodiodes</i>	841
	<i>Avalanche Photodiodes (APDs)</i>	842
	<i>Receiver Circuits</i>	842
18-6	Transmission Technology	844
	<i>Fiber Technology</i>	844
	<i>Connectors, Splices, and Couplers</i>	846
18-7	Fiber-Optic Data-Link Analysis	850
	<i>Analog Link Analysis</i>	850
	<i>Bandwidth/Data Rate</i>	854
	<i>Power Budget</i>	856
18-8	Fiber-Optic Communication Applications	857
	<i>International Networking</i>	857
	<i>Local Area Networking</i>	859
	<i>Wide Area Networks</i>	862
	<i>SONET</i>	862
	<i>Broadband RF Signals on First Generation Fiber-Optic CATV Links</i>	864
	<i>Wavelength-Division Multiplexing Systems</i>	866

<i>Dense Wavelength-Division Multiplexing Systems</i>	868
<i>Coarse Wavelength-Division Multiplexing</i>	870
<i>Digital and Analog Systems Applications of WDM</i>	871
<i>Internet</i>	873
<i>Packet Over SONET</i>	876
<i>Wide-Area Network Edge and Core</i>	876
<i>Multi-Protocol Label Switching</i>	877
<i>Broadband Analog DWDM Applications</i>	879
Problems	885
Computer Analysis	889

Appendices**A-1**

Appendix A	Introducing the Impulse Function	A-2
Appendix B	Filter Attenuation Curves	A-4
Appendix C	Derivation of Frequency Response for PLLs	A-10
Appendix D	Communications Software	A-15
Appendix E	Abbreviations and Acronyms	A-17

Answers to Selected Problems**ANS-1****Index****I-1**
