# Contents

<b>Preface</b>	xiii
<b>1 Classical Mechanics</b>	1
1.1 Newton's Laws, the Action, and the Hamiltonian . . . . .	1
1.1.1 Newton's Law and Lagrange's Equations . . . . .	1
1.1.2 Hamilton's Principle . . . . .	2
1.1.3 Canonical Momenta and the Hamiltonian Formulation . . . . .	4
1.2 Classical Space-Time Symmetries . . . . .	6
1.2.1 The Space-Time Transformations . . . . .	6
1.2.2 Translations . . . . .	8
1.2.3 Rotations . . . . .	9
1.2.4 Rotation Matrices . . . . .	11
1.2.5 Symmetries and Conservation Laws . . . . .	12
Problems . . . . .	14
<b>2 Fundamentals of Quantum Mechanics</b>	19
2.1 The Superposition Principle . . . . .	19
2.1.1 The Double-Slit Experiment . . . . .	19
2.1.2 The Stern-Gerlach Experiment . . . . .	22
2.2 The Mathematical Language of Quantum Mechanics . . . . .	24
2.2.1 Vector Spaces . . . . .	24
2.2.2 The Probability Interpretation . . . . .	27
2.2.3 Linear Operators . . . . .	27
2.2.4 Observables . . . . .	30
2.2.5 Examples . . . . .	31
2.3 Continuous Eigenvalues . . . . .	35
2.3.1 The Dirac Delta Function . . . . .	35
2.3.2 Continuous Observables . . . . .	36
2.3.3 Fourier's Theorem and Representations of $\delta(x)$ . . . . .	37
2.4 Canonical Commutators and the Schrödinger Equation . . . . .	38
2.4.1 The Correspondence Principle . . . . .	38
2.4.2 The Canonical Commutation Relations . . . . .	42
2.4.3 Planck's Constant . . . . .	43
2.5 Quantum Dynamics . . . . .	44
2.5.1 The Time-Translation Operator . . . . .	44
2.5.2 The Heisenberg Picture . . . . .	45
2.6 The Uncertainty Principle . . . . .	47
2.7 Wave Functions . . . . .	49
2.7.1 Wave Functions in Coordinate Space . . . . .	49
2.7.2 Momentum and Translations . . . . .	49
2.7.3 Schrödinger's Wave Equation . . . . .	52
2.7.4 Time-Dependent Free Particle Wave Functions . . . . .	53
Problems . . . . .	55

<b>3 Stationary States</b>	<b>62</b>
3.1 Elementary Examples . . . . .	62
3.1.1 States with Definite Energy . . . . .	62
3.1.2 A Two-State System . . . . .	63
3.1.3 One-Dimensional Potential Problems . . . . .	66
3.2 The Harmonic Oscillator . . . . .	68
3.2.1 The Spectrum . . . . .	69
3.2.2 Matrix Elements . . . . .	71
3.2.3 The Ground-State Energy . . . . .	72
3.2.4 Wave Functions . . . . .	73
3.3 Spherically Symmetric Potentials and Angular Momentum . . . . .	74
3.3.1 Spherical Symmetry . . . . .	74
3.3.2 Orbital Angular Momentum as a Differential Operator . . . . .	75
3.3.3 The Angular Momentum Commutator Algebra . . . . .	76
3.3.4 Classification of the States . . . . .	80
3.4 Spherically Symmetric Potentials: Wave Functions . . . . .	80
3.4.1 Spherical Coordinates and Spherical Harmonics . . . . .	80
3.4.2 The Radial Wave Equation . . . . .	82
3.5 Hydrogenlike Atoms . . . . .	84
3.5.1 The Symmetries . . . . .	84
3.5.2 The Energy Spectrum . . . . .	86
3.5.3 The Radial Wave Functions . . . . .	88
Problems . . . . .	91
<b>4 Symmetry Transformations on States</b>	<b>102</b>
4.1 Introduction . . . . .	102
4.1.1 Symmetries and Transformations . . . . .	102
4.1.2 Groups of Transformations . . . . .	103
4.1.3 Classical and Quantum Symmetries . . . . .	105
4.2 The Rotation Group and Algebra . . . . .	105
4.2.1 Representations of Groups . . . . .	105
4.2.2 Representations of the Generators of Rotations . . . . .	106
4.2.3 Generators in an Arbitrary Direction . . . . .	107
4.2.4 Commutators of the Generators . . . . .	108
4.2.5 Explicit Form of the Finite Dimensional Representations . . . . .	111
4.2.6 Summary . . . . .	112
4.3 Spin and Rotations in Quantum Mechanics . . . . .	113
4.3.1 Rotations and Spinless Particles . . . . .	113
4.3.2 Spin . . . . .	114
4.3.3 The Spin-Zero Representation . . . . .	116
4.3.4 The Spin-Half Representation . . . . .	116
4.3.5 Euler Angles . . . . .	117
4.3.6 The Spin-One Representation . . . . .	119
4.3.7 Arbitrary $j$ . . . . .	119
4.4 Addition of Angular Momenta . . . . .	120
4.4.1 Spin and Orbital Angular Momentum . . . . .	120
4.4.2 Two Simple Examples . . . . .	121

4.5	Clebsch-Gordan Coefficients . . . . .	122
4.5.1	Definition of the Coefficients . . . . .	122
4.5.2	Spin Half + Spin Half . . . . .	123
4.5.3	Spin Half + Angular Momentum One . . . . .	125
4.5.4	Spin Half + Angular Momentum $l$ . . . . .	126
4.5.5	The General Rule . . . . .	127
4.5.6	Recursion Relation for the Coefficients . . . . .	129
4.5.7	The Clebsch-Gordan Series . . . . .	129
	Problems . . . . .	130
5	Symmetry Transformations on Operators	138
5.1	Vector Observables . . . . .	138
5.1.1	Symmetries, Lifetimes, and Selection Rules . . . . .	138
5.1.2	Vector Operators Under Rotations . . . . .	140
5.1.3	Spherical Components of Vector Observables . . . . .	141
5.1.4	Selection Rules for Matrix Elements of Vectors . . . . .	142
5.2	Tensor Observables . . . . .	144
5.2.1	Cartesian Tensor Operators . . . . .	144
5.2.2	Spherical Tensor Components . . . . .	146
5.2.3	Higher Rank Spherical Tensors . . . . .	147
5.2.4	Selection Rules and the Wigner-Eckart Theorem . . . . .	148
5.3	Discrete Symmetries . . . . .	151
5.3.1	Reflections and Parity . . . . .	151
5.3.2	Reversal of the Direction of Motion . . . . .	153
5.3.3	Identical Particles . . . . .	157
5.4	Internal Symmetries: Isospin . . . . .	159
	Problems . . . . .	164
6	Interlude	171
6.1	External Magnetic Fields . . . . .	171
6.1.1	Natural Units . . . . .	171
6.1.2	Gauge Invariance . . . . .	172
6.1.3	Constant Magnetic Fields and Landau Levels . . . . .	173
6.1.4	Magnetic Moment . . . . .	176
6.1.5	The Hydrogen Atom in a Magnetic Field . . . . .	177
6.2	The Density Matrix . . . . .	178
6.2.1	Definition . . . . .	178
6.2.2	Example: Thermodynamic Equilibrium . . . . .	180
6.2.3	Example: Spin-Half Systems . . . . .	181
6.2.4	Spin Magnetic Resonance . . . . .	182
6.3	Neutrino Interference . . . . .	185
6.3.1	Neutrinos . . . . .	185
6.3.2	Neutrino Mixing . . . . .	186
6.3.3	Neutrino Oscillations and the Mass Splitting . . . . .	187
6.3.4	Solar Neutrinos . . . . .	189
6.3.5	Neutrino Oscillations in Matter . . . . .	189
6.4	Measurements in Quantum Mechanics . . . . .	191

6.4.1	Wave-Function Collapse . . . . .	191
6.4.2	The EPR Paradox . . . . .	191
6.4.3	Bell's Inequality . . . . .	193
Problems . . . . .		195
<b>7</b>	<b>Approximation Methods for Bound States</b>	<b>202</b>
7.1	Bound-State Perturbation Theory . . . . .	202
7.1.1	The Perturbation Expansion . . . . .	202
7.1.2	Example: Harmonic Oscillator . . . . .	205
7.2	Static External Electric Fields . . . . .	206
7.2.1	Perturbation of the First Excited Level . . . . .	207
7.2.2	Polarizability of the Ground State . . . . .	208
7.3	Fine Structure of the Hydrogen Atom . . . . .	212
7.3.1	The Spin-Orbit Coupling . . . . .	212
7.3.2	Correction to Energy Levels . . . . .	214
7.3.3	The Relativistic Kinetic Energy Correction . . . . .	215
7.3.4	The Fine Structure of the Hydrogen Atom . . . . .	216
7.3.5	External Magnetic Field Again . . . . .	217
7.3.6	The Hyperfine Structure of the Hydrogen Atom . . . . .	218
7.4	Other Atoms . . . . .	220
7.4.1	The Ground State of Helium . . . . .	220
7.4.2	The Perturbation Method for the Helium Atom . . . . .	222
7.5	The Variational Method . . . . .	223
7.5.1	The General Method . . . . .	223
7.5.2	The Helium Atom . . . . .	225
7.5.3	The Eigenvalue-Variational Scheme . . . . .	228
7.6	Molecules . . . . .	229
7.6.1	The Born-Oppenheimer Approximation . . . . .	229
7.6.2	The Hydrogen Molecular Ion . . . . .	233
7.7	The WKB Method . . . . .	237
7.7.1	Turning Points and Connection Formulas . . . . .	238
7.7.2	The Linear Approximation . . . . .	240
7.7.3	Bound States . . . . .	243
7.7.4	Tunneling through a Barrier . . . . .	247
Problems . . . . .		248
<b>8</b>	<b>Potential Scattering</b>	<b>264</b>
8.1	Introduction . . . . .	264
8.1.1	Kinematics of Scattering . . . . .	264
8.1.2	Scattering and Wave Functions . . . . .	265
8.2	The Scattering Amplitude . . . . .	269
8.2.1	Equation for the Scattering Amplitude . . . . .	269
8.2.2	The Born Series . . . . .	270
8.2.3	Spherically Symmetric Potentials . . . . .	270
8.2.4	The Optical Theorem . . . . .	272
8.2.5	The Refractive Index . . . . .	273
8.3	Partial Waves . . . . .	275

8.3.1	Expansion of a Plane Wave in a Legendre Series . . . . .	276
8.3.2	Partial Wave Expansion of $\psi(\mathbf{r})$ . . . . .	278
8.3.3	Calculation of the Phase Shift . . . . .	280
8.4	The Radial Wave Function . . . . .	281
8.4.1	The Integral Equation . . . . .	281
8.4.2	Partial Wave Green's Functions . . . . .	281
8.4.3	Scattering by an Impenetrable Sphere . . . . .	283
Problems	. . . . .	284
<b>9</b>	<b>Transitions</b>	<b>288</b>
9.1	Transitions in an External Field . . . . .	288
9.1.1	Time-Dependent Perturbations . . . . .	288
9.1.2	The Semiclassical Method . . . . .	288
9.2	The Transition Matrix . . . . .	291
9.2.1	The Transition Matrix . . . . .	292
9.2.2	The Lippmann-Schwinger Equation . . . . .	295
9.2.3	Relation to the Scattering Amplitude . . . . .	297
9.3	Scattering and Cross Sections . . . . .	298
9.3.1	The Scattering Matrix . . . . .	298
9.3.2	The Transition Probability . . . . .	299
9.3.3	Cross Sections . . . . .	300
9.3.4	Scattering of Electrons by Atoms . . . . .	302
9.3.5	Scattering with Recoil . . . . .	303
9.3.6	Identical Particle Scattering . . . . .	305
9.4	Decays of Excited States . . . . .	307
9.4.1	Lowest-Order Transition Rates . . . . .	308
9.4.2	Time Dependence of the Initial State . . . . .	310
9.4.3	Distribution of the Final States . . . . .	314
Problems	. . . . .	316
<b>10</b>	<b>Further Topics in Quantum Dynamics</b>	<b>324</b>
10.1	Path Integration . . . . .	324
10.1.1	The Propagator as an Integral over Paths . . . . .	324
10.1.2	The Free Particle Propagator . . . . .	327
10.1.3	The Harmonic Oscillator . . . . .	328
10.1.4	The Euclidean Formalism . . . . .	331
10.1.5	The Ground-State Energy . . . . .	332
10.2	Path Integration: Some Applications . . . . .	334
10.2.1	The Born Series . . . . .	334
10.2.2	External Fields and Gauge Invariance . . . . .	337
10.2.3	The Aharonov-Bohm Effect . . . . .	338
10.3	Berry's Phase . . . . .	341
10.3.1	Origin of the Phase . . . . .	341
10.3.2	Example: Electron in a Precessing Magnetic Field . . . . .	343
10.3.3	The General Formula . . . . .	344
10.3.4	Two States near a Degeneracy . . . . .	347
10.3.5	Fast and Slow Coordinates . . . . .	348

10.3.6 The Aharonov-Bohm Effect Again . . . . .	351
Problems . . . . .	352
<b>11 The Quantized Electromagnetic Field</b> . . . . .	<b>356</b>
11.1 The Classical Electromagnetic Field Hamiltonian . . . . .	356
11.1.1 Maxwell's Equations and the Transverse Gauge Condition . . . . .	356
11.1.2 The Independent Modes . . . . .	358
11.1.3 The Classical Hamiltonian . . . . .	360
11.1.4 The Canonical Coordinates . . . . .	361
11.2 The Quantized Radiation Field . . . . .	362
11.2.1 The Heisenberg Picture . . . . .	362
11.2.2 Canonical Quantization . . . . .	362
11.2.3 Photons . . . . .	364
11.3 Properties of the Quantum Electromagnetic Field . . . . .	365
11.3.1 The Momentum of the Field . . . . .	365
11.3.2 The Angular Momentum of the Field . . . . .	366
11.3.3 The Photon Spin . . . . .	367
11.4 Electromagnetic Decays of Excited States . . . . .	369
11.4.1 The Unperturbed Hamiltonian . . . . .	369
11.4.2 The Vector Potential Interaction . . . . .	369
11.4.3 The Spin Interaction . . . . .	370
11.4.4 The Rate for Photon Emission . . . . .	370
11.4.5 Multipole Matrix Elements . . . . .	372
11.5 Examples . . . . .	373
11.5.1 Decay of the 2P State of Atomic Hydrogen . . . . .	373
11.5.2 Hyperfine Emission . . . . .	374
11.6 Absorption and Stimulated Emission of Radiation . . . . .	378
11.6.1 Periodic Boundary Conditions . . . . .	378
11.6.2 Absorption . . . . .	379
11.6.3 Stimulated Emission . . . . .	381
11.6.4 The Blackbody Formula . . . . .	382
11.7 Scattering of Photons by Atoms . . . . .	383
11.7.1 The Photoelectric Effect . . . . .	383
11.7.2 Elastic Scattering of Photons . . . . .	385
11.7.3 Scattering by a Free Electron . . . . .	391
11.8 The Casimir Effect . . . . .	394
11.8.1 The Ground-State Energy of the Electromagnetic Field . . . . .	394
11.8.2 The Casimir Force with an Elementary Cutoff . . . . .	397
11.8.3 The General Calculation . . . . .	400
Problems . . . . .	402
<b>12 Relativistic Wave Equations</b> . . . . .	<b>407</b>
12.1 Lorentz Transformations . . . . .	407
12.1.1 Four-Vectors and Tensors . . . . .	407
12.1.2 Lorentz Transformations . . . . .	408
12.1.3 Spin . . . . .	411
12.2 Vector and Scalar Fields . . . . .	413

12.2.1	The Electromagnetic Field . . . . .	413
12.2.2	The Klein-Gordon Equation . . . . .	414
12.3	Relativistic Spin-Half Equations . . . . .	417
12.3.1	Two Component Spin-Half Equations . . . . .	417
12.3.2	The Dirac Equation . . . . .	420
12.3.3	Free Particle Solutions . . . . .	421
12.3.4	Probability Current and Hole Theory . . . . .	423
12.4	Dirac Electron in an Electromagnetic Field . . . . .	423
12.4.1	Second-Order Form of the Dirac Equation . . . . .	423
12.4.2	The Gyromagnetic Ratio . . . . .	424
12.4.3	The Nonrelativistic Limit and the Fine Structure . . . . .	425
12.5	The Dirac Hydrogen Atom . . . . .	428
12.5.1	Second-Order Equation . . . . .	428
12.5.2	Spherically Symmetric Potentials . . . . .	431
12.5.3	Radial Equations . . . . .	432
12.5.4	The Hydrogen Atom . . . . .	433
Problems	. . . . .	435
<b>13</b>	<b>Identical Particles</b> . . . . .	<b>438</b>
13.1	Nonrelativistic Identical-Particle Systems . . . . .	438
13.1.1	Creation and Annihilation Operators for Bosons . . . . .	438
13.1.2	Creation and Annihilation Operators for Fermions . . . . .	443
13.2	Elementary Applications . . . . .	444
13.2.1	Ideal Gas Distributions . . . . .	444
13.2.2	Ideal Electron Gas . . . . .	446
13.2.3	Collapsed Stars . . . . .	448
13.3	Relativistic Spinless Particles . . . . .	453
13.3.1	The Neutral Scalar Field . . . . .	453
13.3.2	The Classical Theory . . . . .	453
13.3.3	The Quantum Theory . . . . .	455
13.3.4	Charged Particles . . . . .	456
13.4	The Quantized Dirac Field . . . . .	458
13.4.1	The Dirac Action . . . . .	458
13.4.2	The Plane Wave Expansion . . . . .	459
13.5	Interacting Relativistic Fields . . . . .	462
13.5.1	Normal Ordering . . . . .	462
13.5.2	Example: The $\phi^4$ interaction . . . . .	463
Problems	. . . . .	465

## APPENDICES

<b>A</b>	<b>Mathematical Tools</b> . . . . .	<b>470</b>
A.1	Miscellaneous Tools . . . . .	470
A.1.1	The Dirac Delta Function . . . . .	470
A.1.2	The Levi-Civita Symbol . . . . .	472
A.1.3	Some Integrals . . . . .	472

A.1.4	The Trapezoidal Approximation Series . . . . .	474
A.2	Special Functions . . . . .	476
A.2.1	Gamma Function . . . . .	476
A.2.2	Legendre Polynomials . . . . .	479
A.2.3	Solutions to the Free Radial Equation . . . . .	484
A.2.4	Hermite Polynomials . . . . .	487
A.2.5	Bessel Functions . . . . .	489
A.3	Orthogonal Curvilinear Coordinates . . . . .	491
A.3.1	Vector Calculus in Orthogonal Curvilinear Coordinates . . . . .	491
A.3.2	Hydrogen Atom in Parabolic Coordinates . . . . .	495
A.3.3	Elliptic Coordinates . . . . .	498
<b>B</b>	<b>Rotation Matrices</b>	<b>500</b>
B.1	Rotation Matrices—I . . . . .	500
B.1.1	Rotation Matrices and Spherical Harmonics . . . . .	500
B.1.2	The Explicit Form of the Rotation Matrices . . . . .	502
B.1.3	The Projection Theorem . . . . .	507
B.2	Rotation Matrices—II . . . . .	508
B.2.1	Averages over Products of Rotation Matrices . . . . .	508
B.2.2	The Wigner-Eckart Theorem Again . . . . .	510
<b>C</b>	<b>SU(3)</b>	<b>512</b>
C.1	The Group and Algebra . . . . .	512
C.2	Some Representations . . . . .	513
