

SOILS AND FOUNDATIONS

SIXTH EDITION

CHENG LIU
JACK B. EVETT

CONTENTS

Preface	ix
1 Formation of Natural Soil Deposits	1
1-1 Introduction	1
1-2 Rocks—The Sources of Soils	1
1-3 Rock Weathering and Soil Formation	3
1-4 Soil Deposits	4
2 Engineering Properties of Soils	9
2-1 Soil Types	9
2-2 Grain-Size Analysis and Atterberg Limits	10
2-3 Soil Classification Systems	19
2-4 Components of Soils	30
2-5 Weight/Mass and Volume Relationships	30
2-6 Permeability, Capillarity, and Frost Heave	38
2-7 Compressibility	39
2-8 Shear Strength	40
2-9 Compactness—Relative Density	41
2-10 Problems	42
3 Soil Exploration	45
3-1 Introduction	45
3-2 Reconnaissance	45
3-3 Steps of Soil Exploration	46
3-4 Groundwater Table	56
3-5 Standard Penetration Test (ASTM D 1586)	56
3-6 Cone Penetration Test (ASTM D 3441 AND D 5778)	62
3-7 Vane Test	68
3-8 Geophysical Methods of Soil Exploration	70
3-9 Record of Soil Exploration	78
3-10 Conclusion	80
3-11 Problems	80

4	<i>Soil Compaction and Stabilization</i>	83
4-1	Definition and Purpose of Compaction	83
4-2	Laboratory Compaction Tests (ASTM D 698 and D 1557)	84
4-3	Factors Affecting Compaction of Soil	88
4-4	Field Compaction	92
4-5	Dynamic Compaction	95
4-6	In-Place Soil Unit Weight Test	98
4-7	Field Control of Compaction	105
4-8	Soil Stabilization	108
4-9	Problems	111
5	<i>Water in Soil</i>	113
5-1	Introduction	113
5-2	Flow of Water in Soils	113
5-3	Capillary Rise in Soils	129
5-4	Frost Action in Soils	132
5-5	Flow Nets and Seepage	132
5-6	Problems	138
6	<i>Stress Distribution in Soil</i>	143
6-1	Introduction	143
6-2	Vertical Pressure Below a Concentrated Load	143
6-3	Vertical Pressure Below a Loaded Surface Area (Uniform Load)	148
6-4	Problems	168
7	<i>Consolidation of Soil and Settlement of Structures</i>	171
7-1	Introduction	171
7-2	Immediate Settlement of Loads on Clay	173
7-3	Consolidation Test	175
7-4	Normally Consolidated Clay	185
7-5	Overconsolidated Clay	188
7-6	Field Consolidation Line	189
7-7	Settlement of Loads on Clay Due to Primary Consolidation	193

- 7-8 Settlement of Loads on Clay Due to Secondary Compression 210
- 7-9 Settlement of Loads on Sand 214
- 7-10 Problems 222

8 *Shear Strength of Soil* 227

- 8-1 Introduction 227
- 8-2 Methods of Investigating Shear Strength 228
- 8-3 Characteristics of the Failure Plane 242
- 8-4 Shear Strength of Cohesionless Soils 248
- 8-5 Shear Strength of Cohesive Soils 248
- 8-6 Problems 255

9 *Shallow Foundations* 257

- 9-1 Introduction 257
- 9-2 Loads on Foundations 258
- 9-3 Depth and Location of Foundations 261
- 9-4 Bearing Capacity Analysis 264
- 9-5 Size of Footings 288
- 9-6 Contact Pressure 293
- 9-7 Total and Differential Settlement 305
- 9-8 Structural Design of Footings 305
- 9-9 Problems 306

10 *Pile Foundations* 311

- 10-1 Introduction 311
- 10-2 Types of Piles 311
- 10-3 Length of Piles 313
- 10-4 Pile Capacity 313
- 10-5 Pile-Driving Formulas 330
- 10-6 Pile Load Tests 334
- 10-7 Negative Skin Friction (Down Drag) 339
- 10-8 Pile Groups and Spacing of Piles 339
- 10-9 Efficiency of Pile Groups 339
- 10-10 Distribution of Loads in Pile Groups 346
- 10-11 Settlement of Pile Foundations 349
- 10-12 Construction of Pile Foundations 353
- 10-13 Problems 357

11	<i>Drilled Shaft Foundations</i>	365
11-1	Introduction	365
11-2	Bearing Capacity of Drilled Shafts	366
11-3	Settlement of Drilled Shafts	371
11-4	Construction and Inspection of Drilled Shafts	372
11-5	Problems	373
12	<i>Lateral Earth Pressure</i>	375
12-1	Introduction	375
12-2	Earth Pressure at Rest	376
12-3	Rankine Earth Pressures	383
12-4	Coulomb Earth Pressures	390
12-5	Effects of a Surcharge Load upon Active Thrust	396
12-6	Culmann's Graphic Solution	398
12-7	Design Considerations for Retaining Walls	404
12-8	Lateral Earth Pressure on Braced Sheetings	406
12-9	Problems	410
13	<i>Retaining Structures</i>	413
13-1	Introduction	413
13-2	Retaining Walls	413
13-3	Earth Pressure Computation	415
13-4	Stability Analysis	415
13-5	Backfill Drainage	427
13-6	Settlement and Tilting	429
13-7	Reinforced Earth Walls	429
13-8	Slurry Trench Walls	434
13-9	Anchored Bulkheads	435
13-10	Problems	441
14	<i>Stability Analysis of Slopes</i>	445
14-1	Introduction	445
14-2	Analysis of a Mass Resting on an Inclined Layer of Impermeable Soil	445
14-3	Slopes in Homogeneous Cohesionless Soils ($c = 0, \phi > 0$)	449
14-4	Slopes in Homogeneous Soils Possessing Cohesion ($c > 0, \phi = 0$, and $c > 0, \phi > 0$)	449

14-5 Method of Slices 463

14-6 Problems 470

Answers to Selected Problems 473

Appendix: Conversion Factors 475

References Cited 477
