Matthias Beller and Carsten Bolm

WILEY-VCH

Transition Metals for Organic Synthesis

Building Blocks and Fine Chemicals

Volume 2

Second Revised
and
Enlarged Edition

Contents

1	Reductions	1
1.1	Homogeneous Hydrogenations	3
1.1.1	Olefin Hydrogenations	3
	<i>Armin Börner and Jens Holz</i>	
1.1.1.1	Various Applications	3
1.1.1.1.1	Hydrogenation of Mono- and Polyolefins	4
1.1.1.1.2	Diastereoselective Hydrogenation	6
1.1.1.1.3	Asymmetric Hydrogenation	7
1.1.2	Unnatural α -Amino Acids via Asymmetric Hydrogenation of Enamides	14
	<i>Terry T.-L. Au-Yeung, Shu-Sun Chan, and Albert S. C. Chan</i>	
1.1.2.1	Introduction	14
1.1.2.2	Metals	14
1.1.2.3	Ligands	15
1.1.2.4	Other Reaction Parameters	15
1.1.2.5	Asymmetric Hydrogenation of Enamides	15
1.1.2.5.1	Diphospholane Derivatives	15
1.1.2.5.2	Ferrocene-based Diphosphines	19
1.1.2.5.3	<i>P</i> -Chiral Diphosphines	19
1.1.2.5.4	Miscellaneous Diphosphines	20
1.1.2.5.5	Bidentate Phosphorus Ligands Containing One or More P-O or P-N Bonds	20
1.1.2.5.6	Chiral Monodentate Phosphorus Ligands	21
1.1.2.6	Cyclic Substrates	21
1.1.2.7	β,β -Disubstituted Enamides	22
1.1.2.8	Selected Applications	23
1.1.2.9	Mechanistic Studies – New Developments	24
1.1.2.10	Catalyst Recycle [46]	25
1.1.2.11	Conclusion	26

- 1.1.3 Carbonyl Hydrogenations 29
Takeshi Ohkuma and Ryoji Noyori
- 1.1.3.1 Introduction 29
- 1.1.3.2 Ketones and Aldehydes 29
- 1.1.3.2.1 Simple Ketones and Aldehydes 29
- 1.1.3.2.2 Functionalized Ketones 69
- 1.1.3.3 Carboxylic Acids and their Derivatives 95
- 1.1.3.3.1 Carboxylic Acids 96
- 1.1.3.3.2 Esters and Lactones 98
- 1.1.3.3.3 Anhydrides 99
- 1.1.3.4 Carbon Dioxide 100
- 1.1.4 Enantioselective Reduction of C=N Bonds and Enamines with Hydrogen 113
Felix Spindler and Hans-Ulrich Blaser
- 1.1.4.1 Introduction 113
- 1.1.4.2 Enantioselective Reduction of *N*-aryl Imines 114
- 1.1.4.3 Enantioselective Reduction of *N*-alkyl Imines and Enamines 117
- 1.1.4.4 Enantioselective Reduction of Cyclic Imines 118
- 1.1.4.5 Enantioselective Reduction of Miscellaneous C=N–X Systems 119
- 1.1.4.6 Assessment of Catalysts 120
- 1.1.4.7 Summary 121
- 1.2 Heterogeneous Hydrogenation: a Valuable Tool for the Synthetic Chemist 125**
Hans-Ulrich Blaser, Heinz Steiner, and Martin Studer
- 1.2.1 Introduction 125
- 1.2.2 Some Special Features of Heterogeneous Catalysts 126
- 1.2.3 Hydrogenation Catalysts 127
- 1.2.3.1 Catalyst Suppliers 128
- 1.2.3.2 Choice of the Catalyst 129
- 1.2.4 Hydrogenation Reactions 130
- 1.2.4.1 Reaction Medium and Process Modifiers 130
- 1.2.4.2 Reaction Conditions 131
- 1.2.4.3 Apparatus and Procedures 131
- 1.2.5 Selected Transformations 132
- 1.2.5.1 Hydrogenation of Aromatic Nitro Groups 132
- 1.2.5.1.1 Chemoselectivity 133
- 1.2.5.1.2 Hydroxylamine Accumulation 133
- 1.2.5.2 Hydrogenation of Ketones 134
- 1.2.5.3 Hydrogenation of Alkenes 135
- 1.2.5.4 Hydrogenation of Aromatic Rings 136
- 1.2.5.5 Catalytic Debenzylation 137
- 1.2.5.5.1 Catalysts and Reaction Parameters 137
- 1.2.5.5.2 Selective Removal of *O*-Benzyl Groups 138
- 1.2.5.5.3 Selective Removal of *N*-Benzyl Groups 139

- 1.2.5.5.4 New Protecting Groups 140
- 1.2.5.6 Chemoselective Hydrogenation of Nitriles 140
- 1.2.6 Conclusions and Outlook 141
- 1.3 Transferhydrogenations 145**
Serafino Gladioli and Elisabetta Alberico
 - 1.3.1 Introduction 145
 - 1.3.2 General Background 145
 - 1.3.2.1 Mechanism 146
 - 1.3.2.2 Hydrogen Donors and Promoters 152
 - 1.3.2.3 Catalysts 152
 - 1.3.2.3.1 Metals 152
 - 1.3.2.3.2 Ligands 154
 - 1.3.3 Substrates 155
 - 1.3.3.1 Ketones and Aldehydes 157
 - 1.3.3.2 Conjugated C–C Double Bond 159
 - 1.3.3.3 Imines and Other Nitrogen Compounds 160
 - 1.3.3.4 Other Substrates 161
 - 1.3.4 Miscellaneous H-Transfer Processes 161
 - 1.3.4.1 Kinetic Resolution and Dynamic Kinetic Resolution 161
 - 1.3.4.2 Green H-Transfer Processes 162
- 1.4 Hydrosilylations 167**
 - 1.4.1 Hydrosilylation of Olefins 167
K. Yamamoto and T. Hayash
 - 1.4.1.1 Introduction 167
 - 1.4.1.2 Hydrosilylation of Alkenes 168
 - 1.4.1.2.1 Mechanistic Studies of Hydrosilylation Catalyzed by Groups 9 and 10 Metal Complexes 168
 - 1.4.1.2.2 Hydrosilylations of Alkenes of Synthetic Value 169
 - 1.4.1.3 Hydrosilylation of Alkynes 171
 - 1.4.1.3.1 Mechanistic Aspects 171
 - 1.4.1.3.2 Stereo- and Regioselective Hydrosilylations of 1-Alkynes: Products of Particular Value 171
 - 1.4.1.4 Catalytic Asymmetric Hydrosilylation of Alkenes 173
 - 1.4.1.4.1 Palladium-catalyzed Asymmetric Hydrosilylation of Styrenes with Trichlorosilane 174
 - 1.4.1.4.2 Palladium-catalyzed Asymmetric Hydrosilylation of 1,3-Dienes with Trichlorosilane 176
 - 1.4.1.4.3 Palladium-catalyzed Asymmetric Cyclization-Hydrosilylation 178
 - 1.4.1.4.4 Asymmetric Hydrosilylation with Yttrium as a Catalyst 179
 - 1.4.2 Hydrosilylations of Carbonyl and Imine Compounds 182
Hisao Nishiyama
 - 1.4.2.1 Hydrosilylation of Carbonyl Compounds 182
 - 1.4.2.1.1 Rhodium Catalysts 182

- 1.4.2.1.2 Iridium Catalysts 186
- 1.4.2.1.3 Ruthenium Catalysts 186
- 1.4.2.1.4 Copper Catalysts 186
- 1.4.2.1.5 Titanium Catalysts 187
- 1.4.2.2 Hydrosilylation of Imine Compounds 188
 - 1.4.2.2.1 Rhodium Catalysts 188
 - 1.4.2.2.2 Titanium Catalysts 188
 - 1.4.2.2.3 Ruthenium Catalysts 189
- 1.5 **Transition Metal-Catalyzed Hydroboration of Olefins** 193
Gregory C. Fu
 - 1.5.1 Introduction 193
 - 1.5.2 Catalytic Asymmetric Hydroboration of Olefins 193
 - 1.5.3 Applications of Transition Metal-Catalyzed Hydroboration in Synthesis 196
 - 1.5.4 Transition Metal-Catalyzed Hydroboration in Supercritical CO₂ 197
 - 1.5.5 Summary 198
- 2 **Oxidations** 199
 - 2.1 **Basics of Oxidations** 201
Roger A. Sheldon and Isabel W.C.E. Arends
 - 2.1.1 Introduction 201
 - 2.1.2 Free-Radical Autoxidations 202
 - 2.1.3 Direct Oxidation of the Substrate by the (Metal) Oxidant 205
 - 2.1.4 Catalytic Oxygen Transfer 207
 - 2.1.5 Ligand Design in Oxidation Catalysis 210
 - 2.1.6 Enantioselective Oxidations 211
 - 2.1.7 Concluding Remarks 211
 - 2.2 **Oxidations of C–H Compounds Catalyzed by Metal Complexes** 215
Georgiy B. Shul'pin
 - 2.2.1 Introduction 215
 - 2.2.2 Oxidation with Molecular Oxygen 219
 - 2.2.3 Combination of Molecular Oxygen with a Reducing Agent 224
 - 2.2.4 Hydrogen Peroxide as a Green Oxidant 226
 - 2.2.5 Organic Peroxy Acids 230
 - 2.2.6 Alkyl Hydroperoxides as Oxidants 231
 - 2.2.7 Oxidation with Sulfur-containing Peroxides 231
 - 2.2.8 Iodosobenzene as an Oxidant 233
 - 2.2.9 Oxidations with Other Reagents 235
 - 2.3 **Allylic Oxidations** 243
 - 2.3.1 Palladium-Catalyzed Allylic Oxidation of Olefins 243
Helena Grennberg and Jan-E. Bäckvall

2.3.1.1	Introduction	243
2.3.1.1.1	General	243
2.3.1.1.2	Oxidation Reactions with Pd(II)	243
2.3.1.2	Palladium-Catalyzed Oxidation of Alkenes: Allylic Products	245
2.3.1.2.1	Intermolecular Reactions	245
2.3.1.2.2	Mechanistic Considerations	247
2.3.1.2.3	Intramolecular Reactions	248
2.3.1.3	Palladium-Catalyzed Oxidation of Conjugated Dienes: Diallylic Products	249
2.3.1.3.1	1,4-Oxidation of 1,3-Dienes	249
2.3.1.3.2	Intermolecular 1,4-Oxidation Reactions	250
2.3.1.3.3	Intramolecular 1,4-Oxidation Reactions	253
2.3.2	Kharasch-Sosnovsky Type Allylic Oxidations <i>Jacques Le Paih, Gunther Schlingloff, and Carsten Bolm</i>	256
2.3.2.1	Introduction	256
2.3.2.2	Background	256
2.3.2.3	Copper-Catalyzed Allylic Acyloxylation	256
2.3.2.3.1	Asymmetric Acyloxylation with Chiral Amino Acids	259
2.3.2.3.2	Asymmetric Acyloxylation with Chiral Oxazolines	260
2.3.2.3.3	Asymmetric Acyloxylation with Chiral Bipyridines and Phenanthrolines	262
2.3.2.4	Perspectives	263
2.4	Metal-Catalyzed Baeyer-Villiger Reactions <i>Carsten Bolm, Chiara Palazzi, and Oliver Beckmann</i>	267
2.4.1	Introduction	267
2.4.2	Metal Catalysis	267
2.4.3	Perspectives	272
2.5	Asymmetric Dihydroxylation <i>Hartmuth C. Kolb and K. Barry Sharpless</i>	275
2.5.1	Introduction	275
2.5.2	The Mechanism of the Osmylation	278
2.5.3	Development of the Asymmetric Dihydroxylation	283
2.5.3.1	Process Optimization	283
2.5.3.2	Ligand Optimization	285
2.5.3.3	Empirical Rules for Predicting the Face Selectivity	287
2.5.3.3.1	The Mnemonic Device – Ligand-specific Preferences	287
2.5.3.3.3	The Mnemonic Device – Exceptions	289
2.5.3.4	Mechanistic Models for the Rationalization of the Face Selectivity	290
2.5.3.5	The Cinchona Alkaloid Ligands and their Substrate Preferences	293
2.5.4	Asymmetric Dihydroxylation – Recent Developments <i>Kilian Muñiz</i>	298
2.5.4.1	Introduction	298
2.5.4.2	Homogeneous Dihydroxylation	299

- 2.5.4.2.1 Experimental Modifications 299
- 2.5.4.2.2 Kinetic Resolutions 300
- 2.5.4.2.3 Mechanistic Discussion 301
- 2.5.4.2.4 Directed Dihydroxylation Reactions 301
- 2.5.4.2.5 Secondary-Cycle Catalysis 302
- 2.5.4.2.6 Polymer Support 304
- 2.5.4.3 Alternative Oxidation Systems 305

- 2.6 Asymmetric Aminohydroxylation 309**
Hartmuth C. Kolb and K. Barry Sharpless
- 2.6.1 Introduction 309
- 2.6.2 Process Optimization of the Asymmetric Aminohydroxylation Reaction 312
- 2.6.2.1 General Observations – Comparison of the Three Variants of the AA Reaction 312
- 2.6.2.2 The Sulfonamide Variant [5–7, 9] 315
- 2.6.2.3 The Carbamate Variant [8–10] 320
- 2.6.2.4 The Amide Variant [11] 323
- 2.6.3 Asymmetric Aminohydroxylation – Recent Developments 326
Kilian Muñiz
- 2.6.3.1 Introduction 326
- 2.6.3.2 Recent Developments 327
- 2.6.3.2.1 Nitrogen Sources and Substrates 327
- 2.6.3.2.2 Regioselectivity 328
- 2.6.3.2.4 Intramolecular Aminohydroxylation 330
- 2.6.3.2.5 “Secondary-Cycle” Aminohydroxylations 331
- 2.6.3.3 Vicinal Diamines 333
- 2.6.3.4 Asymmetric Diamination of Olefins 333

- 2.7 Epoxidations 337**
- 2.7.1 Titanium-Catalyzed Epoxidation 337
Tsutomu Katsuki
- 2.7.1.1 Introduction 337
- 2.7.1.2 Epoxidation using Heterogeneous Catalysts 337
- 2.7.1.3 Epoxidation using Homogeneous Catalyst 340
- 2.7.1.4 Asymmetric Epoxidation 341
- 2.7.2 Manganese-Catalyzed Epoxidations 344
Kilian Muñiz and Carsten Bolm
- 2.7.2.1 Introduction 344
- 2.7.2.2 Salen-based Manganese Epoxidation Complexes 344
- 2.7.2.3 Aerobic Epoxidation with Manganese Complexes 349
- 2.7.2.4 Triazacyclononanes as Ligands for Manganese Epoxidation Catalysts 351
- 2.7.2.5 Summary 353

- 2.7.3 Rhenium-Catalyzed Epoxidations 357
Fritz E. Kühn, Richard W. Fischer, and Wolfgang A. Herrmann
- 2.7.3.1 Introduction and Motivation 357
- 2.7.3.2 Synthesis of the Catalyst Precursors 357
- 2.7.3.3 Epoxidation of Olefins 358
- 2.7.3.3.1 The Catalytically Active Species 359
- 2.7.3.3.2 The Catalytic Cycles 360
- 2.7.3.3.3 Catalyst Deactivation 361
- 2.7.3.3.4 The Role of Lewis Base Ligands 361
- 2.7.3.3.5 Heterogeneous Catalyst Systems 363
- 2.7.3.4 Summary: Scope of the Reaction 364
- 2.7.4 Other Transition Metals in Olefin Epoxidation 368
W. R. Thiel
- 2.7.4.1 Introduction 368
- 2.7.4.2 Group III Elements (Scandium, Yttrium, Lanthanum) and Lanthanoids 369
- 2.7.4.3 Group IV Elements (Zirconium, Hafnium) 370
- 2.7.4.4 Group V Elements (Vanadium, Niobium, Tantalum) 371
- 2.7.4.5 Group VI Elements (Chromium, Molybdenum, Tungsten) 372
- 2.7.4.6 Group VII Elements (Manganese, Technetium, Rhenium) 373
- 2.7.4.7 Group VIII Elements (Iron, Ruthenium, Osmium) 373
- 2.7.4.8 Late Transition Metals 375
- 2.8 Wacker-Type Oxidations 279**
Lukas Hintermann
- 2.8.1 Introduction 379
- 2.8.2 The Wacker-Hoechst Acetyldehyde Synthesis 380
- 2.8.3 The Wacker-Tsuji Reaction 381
- 2.8.3.1 Reaction Conditions 381
- 2.8.3.2 Synthetic Applications 381
- 2.8.3.2.1 Inversion of Regioselectivity: Oxidation of Terminal Olefins to Aldehydes and Lactones 382
- 2.8.3.2.2 Oxidation of Internal Alkenes 382
- 2.8.4 Addition of ROH with β -H-Elimination to Vinyl or Allyl Compounds 383
- 2.8.4.1 Synthesis of Vinyl Ethers and Acetals 383
- 2.8.4.2 Allyl Ethers by Cyclization of Alkenols 384
- 2.8.4.3 Synthesis of Allyl Esters from Olefins 385
- 2.8.5 Further Reactions Initiated by Hydroxy-Palladation 385
- 2.8.6 Palladium-Catalyzed Addition Reactions of Oxygen Nucleophiles 386
- 2.8.7 Conclusion 387
- 2.9 Catalyzed Asymmetric Aziridinations 389**
Christian Mößner and Carsten Bolm
- 2.9.1 Introduction 389

- 2.9.2 Olefins as Starting Materials 389
 - 2.9.2.1 Use of Chiral Copper Complexes 389
 - 2.9.2.1.1 Nitrene Transfer with Copper Catalysts bearing Bis(Oxazoline) Ligands 389
 - 2.9.2.1.2 Nitrene Transfer with Copper Catalysts bearing Schiff Base Ligands 391
 - 2.9.2.1.3 Miscellaneous Ligands 393
 - 2.9.2.2 Rh-Catalyzed Aziridinations 393
 - 2.9.2.3 Other Metals in Aziridinations 394
 - 2.9.2.3.1 Nitrene Transfer with Salen Complexes 394
 - 2.9.2.3.2 Nitrene Transfer with Porphyrin Complexes 395
 - 2.9.3 Imines as Starting Materials 396
 - 2.9.3.1 Use of Metal Complexes 397
 - 2.9.3.2 Use of Lewis Acids 398
 - 2.9.3.3 Ylide Reactions 399
 - 2.9.4 Conclusion 400

- 2.10 **Catalytic Amination Reactions of Olefins and Alkynes** 403
Matthias Beller, Annegret Tillack, and Jaysree Seayad
 - 2.10.1 Introduction 403
 - 2.10.2 The Fundamental Chemistry 404
 - 2.10.3 Catalysts 404
 - 2.10.4 Oxidative Aminations 406
 - 2.10.5 Transition Metal-Catalyzed Hydroaminations 406
 - 2.10.6 Base-Catalyzed Hydroaminations 410
 - 2.10.7 Conclusions 412

- 2.11 **Polyoxometalates as Catalysts for Oxidation with Hydrogen Peroxide and Molecular Oxygen** 415
Ronny Neumann
 - 2.11.1 Definitions and Concepts 415
 - 2.11.2 Oxidation with Hydrogen Peroxide 417
 - 2.11.3 Oxidation with Molecular Oxygen 420
 - 2.11.4 Conclusion 423

- 2.12 **Oxidative Cleavage of Olefins** 427
Fritz E. Kühn, Richard W. Fischer, Wolfgang A. Herrmann, and Thomas Weskamp
 - 2.12.1 Introduction and Motivation 427
 - 2.12.2 Two-Step Synthesis of Carboxylic Acids from Olefins 428
 - 2.12.2.1 Formation of Keto-Compounds from Olefinic Precursors – Wacker-Type Oxidations 428
 - 2.12.2.2 Cleavage of Keto-Compounds and vic-Diols into Carboxylic Acids 429
 - 2.12.3 One-Step Oxidative Cleavage Applying Ruthenium Catalysts and Percarboxylic Acids as Oxidants 429

- 2.12.3.1 General Aspects 429
- 2.12.3.2 Optimized Catalyst Systems and Reaction Conditions 430
- 2.12.4 Selective Cleavage of Olefins Catalyzed by Alkylrhenium Compounds 432
- 2.12.4.1 Rhenium-Catalyzed Formation of Aldehydes from Olefins 432
- 2.12.4.2 Acid Formation from Olefins with Rhenium/Co-Catalyst Systems 433
- 2.12.5 Other Systems 434

- 2.13 Aerobic, Metal-Catalyzed Oxidation of Alcohols 437**
István. E. Markó Paul R. Giles, Masao Tsukazaki, Arnaud Gautier, Raphaël Dumeunier, Kanae Doda, Freddi Philippart, Isabelle Chellé-Regnault, Jean-Luc Mutonkole, Stephen M. Brown, and Christopher J. Urch
- 2.13.1 Introduction 437
- 2.13.2 General Survey 438
- 2.13.3 Copper-Based Aerobic Oxidations 452

- 2.14 Catalytic Asymmetric Sulfide Oxidations 479**
H. B. Kagan and T. O. Luukas
- 2.14.1 Introduction 479
- 2.14.2 Sulfoxidation Catalyzed by Chiral Titanium Complexes 479
- 2.14.2.1 Diethyl Tartrate as Ligand 479
- 2.14.2.2 1,2-Diarylethane 1,2-Diols as Ligands 482
- 2.14.2.3 Binol as Ligand 482
- 2.14.2.4 Trialkanolamines as Ligands 484
- 2.14.2.5 Chiral Schiff Bases as Ligands 484
- 2.14.3 Sulfoxidation Catalyzed by Chiral Salen Vanadium Complexes 486
- 2.14.4 Sulfoxidation Catalyzed by Chiral Salen Manganese(III) Complexes 488
- 2.14.5 Sulfoxidation Catalyzed by Chiral β -Oxo Aldiminatomanganese(III) Complexes 489
- 2.14.6 Sulfoxidation Catalyzed by Iron or Manganese Porphyrins 489
- 2.14.7 Sulfoxidation Catalyzed by Iron Non-Porphyrinic Complexes 490
- 2.14.8 Sulfoxidation Catalyzed by Chiral Ruthenium or Tungsten Complexes 490
- 2.14.9 Kinetic Resolution 491
- 2.14.9.1 Kinetic Resolution of a Racemic Sulfide 491
- 2.14.9.2 Kinetic Resolution of a Racemic Sulfoxide 491
- 2.14.9.3 Kinetic Resolution of Racemic Hydroperoxides during Asymmetric Sulfoxidation 492
- 2.14.10 Conclusion 493

- 2.15 Amine Oxidation 497**
Shun-Ichi Murahashi and Yasushi Imada
- 2.15.1 Introduction 497
- 2.15.2 Low-Valent Transition Metals for Catalytic Dehydrogenative Oxidation of Amines 497
- 2.15.2.1 Oxidation of Primary and Secondary Amines 498
- 2.15.2.2 Oxidation of Tertiary Amines 498
- 2.15.3 Metal Hydroperoxy and Peroxy Species for Catalytic Oxygenation of Amines 499
- 2.15.3.1 Oxygenation of Secondary Amines 500
- 2.15.3.2 Oxygenation of Primary Amines 501
- 2.15.3.3 Oxygenation of Tertiary Amines 502
- 2.15.4 Metal Oxo Species for Catalytic Oxygenation of Amines 502
- 2.15.4.1 Oxygenation of Tertiary Amines 503
- 2.15.4.2 Oxygenation of Secondary and Primary Amines 504
- 2.15.5 Conclusion 505
- 3 Special Topics 509**
- 3.1 Two-Phase Catalysis 511**
D. Sinou
- 3.1.1 Introduction 511
- 3.1.2 Catalysis in an Aqueous-Organic Two-Phase System 512
- 3.1.2.1 Definitions and Concepts 512
- 3.1.2.2 Hydroformylation 516
- 3.1.2.3 Alkylation and Coupling Reaction 517
- 3.1.2.4 Other Reactions 520
- 3.1.3 Other Methodologies 520
- 3.1.3.1 Supported Aqueous Phase Catalyst 520
- 3.1.3.2 Inverse Phase Catalysis 521
- 3.1.4 Conclusion 522
- 3.2 Transition Metal-Based Fluorous Catalysts 527**
Rosenildo Corrêa da Costa and J. A. Gladysz
- 3.2.1 Brief Introduction to Fluorous Catalysis 527
- 3.2.2 Alkene Hydroformylation 528
- 3.2.3 Alkene Hydrogenation 529
- 3.2.4 Alkene/Alkyne Hydroboration and Alkene/
Ketone Hydrosilylation 530
- 3.2.5 Reactions of Diazo Compounds 530
- 3.2.6 Palladium-Catalyzed Carbon-Carbon Bond-Forming Reactions of Aryl Halides 532
- 3.2.7 Other Palladium-Catalyzed Carbon-Carbon Bond-Forming Reactions 533

- 3.2.8 Zinc-Catalyzed Additions of Dialkylzinc Compounds to Aldehydes 533
- 3.2.9 Titanium-Catalyzed Additions of Carbon Nucleophiles to Aldehydes 535
- 3.2.10 Oxidations 536
- 3.2.10.1 Alkene Epoxidation 536
- 3.2.10.2 Other Oxidations of Alkenes and Alkanes [29–31] 536
- 3.2.10.3 Oxidations of Other Functional Groups [28, 32–34] 536
- 3.2.11 Other Metal-Catalyzed Reactions 538
- 3.2.12 Related Methods 539
- 3.2.13 Summary and Outlook 539
- 3.3 Organic Synthesis with Transition Metal Complexes using Compressed Carbon Dioxide as Reaction Medium 345**
Giancarlo Franciò and Walter Leitner
- 3.3.1 Carbon Dioxide as Reaction Medium for Transition Metal Catalysis 545
- 3.3.2 Reaction Types and Catalytic Systems for Organic Synthesis with Transition Metal Complexes in Compressed Carbon Dioxide 546
- 3.3.2.1 Hydrogenation and Related Reactions 546
- 3.3.2.2 Hydroformylation and Carbonylation Reactions 549
- 3.3.2.3 C-C Bond Formation Reactions 551
- 3.3.2.4 Oxidation Reactions 554
- 3.3.3 Conclusion and Outlook 556
- 3.4 Transition Metal Catalysis using Ionic Liquids 559**
Peter Wasserscheid
- 3.4.1 Ionic Liquids 559
- 3.4.2 Liquid-Liquid Biphasic Catalysis 562
- 3.4.3 Pd-Catalyzed Reactions in Ionic Liquids 563
- 3.4.3.1 The Heck Reaction 563
- 3.4.3.2 Cross-Coupling Reactions 565
- 3.4.3.3 Ionic Liquid-Mediated Allylation/Trost-Tsujii Reactions 566
- 3.4.3.4 Carbonylation of Aryl Halides 567
- 3.4.3.5 Pd-Catalyzed Dimerization and Polymerization 567
- 3.4.4 Conclusion 568
- 3.5 Transition Metals in Photocatalysis 573**
H. Hennig
- 3.5.1 Introduction 573
- 3.5.2 Photochemical Generation of Coordinatively Unsaturated Complex Fragments 575
- 3.5.3 Photochemically Generated Free Ligands as Catalysts 576
- 3.5.4 Conclusions 579

- 3.6 Transition Metals in Radiation-Induced Reactions for Organic Synthesis: Applications of Ultrasound 583**
Pedro Cintas
- 3.6.1 Sonochemistry and Metal Activation 583
- 3.6.2 Preparation of Nanosized Materials 585
- 3.6.2.1 Metals 585
- 3.6.2.2 Metallic Colloids 586
- 3.6.2.3 Alloys and Binary Mixtures 586
- 3.6.2.4 Oxides 587
- 3.6.2.5 Miscellaneous Derivatives 588
- 3.6.3 Formation of Organometallic Reagents 588
- 3.6.4 Bond-Forming Reactions in Organic Synthesis 590
- 3.6.5 Oxidations and Reductions 592
- 3.6.6 Concluding Remarks 594
- 3.7 Applications of Microwaves 597**
J. Lee and D.J. Hlasta
- 3.7.1 Introduction 597
- 3.7.2 C–C Bond Formation/Cross Coupling 598
- 3.7.2.1 Heck Coupling 598
- 3.7.2.2 Stille Coupling 599
- 3.7.2.3 Suzuki Coupling 600
- 3.7.2.4 Sonogashira Coupling 600
- 3.7.2.5 Olefin Metathesis 601
- 3.7.2.6 Pauson-Khand Reaction 601
- 3.7.3 C-Heteroatom Bond Formation 602
- 3.7.3.1 Buchwald-Hartwig Reaction 602
- 3.7.3.2 Aziridination of Olefins 602
- 3.7.3.3 Other C-Heteroatom Bond Formations 603
- 3.7.4 Synthesis of Heterocycles 604
- 3.7.4.1 Biginelli Multicomponent Condensation 604
- 3.7.4.2 2-Cyclobenzothiazoles via *N*-Arylimino-1,2,3-dithiazoles 604
- 3.7.4.3 Synthesis of Acridines 605
- 3.7.4.4 Dötz Benzannulation Process 605
- 3.7.4.5 Benzofused Azoles 606
- 3.7.4.6 Pyrrolidines 606
- 3.7.5 Miscellaneous Reactions 607
- 3.7.6 Conclusion 607
- 3.8 Transition Metal Catalysis under High Pressure in Liquid Phase 609**
Oliver Reiser
- 3.8.1 Introduction 609
- 3.8.2 General Principles of High Pressure 609
- 3.8.3 Influence of Pressure on Rates and Selectivity in Lewis Acid-Catalyzed Cycloadditions 610

- 3.8.4 Nucleophilic Substitution 613
 - 3.8.5 Addition of Nucleophiles to Carbonyl Compounds 614
 - 3.8.6 Influence of Pressure on Rates and Selectivity in Palladium-Catalyzed
Cycloadditions 614
 - 3.8.7 Rhodium-Catalyzed Hydroboration 620
- Subject Index** 623
