

DNA Sequencing
Optimizing the Process
and Analysis

Edited by Jan Kieleczawa

Contents

Contributors xii

Preface xiii

Foreword by Elaine R. Mardis xvii

Chapter 1. Controlled Heat-Denaturation of DNA Plasmids 1

Jan Kieleczawa

Introduction 1

Experimental Design 2

DNA Sequencing 2

Temperature-Dependence of Plasmid Denaturation 3

Buffer-Strength Dependence of Plasmid Denaturation 4

Time-Course of Heat-Denaturation of DNA Plasmids 4
of Varying Sizes

Benefits of Heat-Denaturation 6

Conclusions 9

Chapter 2. Effects of Various Reagents on DNA Sequencing Process 11

Jan Kieleczawa

Introduction 11

Experimental Design 12

Effects of Magnesium ($MgCl_2$) 12

Effect of EDTA 12

Dilution Limits of BigDye Terminator 13

Effects of Different Salts 14

Effects of Other Reagents 15

Effects of Foreign DNA and RNA 17

Effects of Primer Concentration 18

Troubleshooting of Sequencing Reactions 18

Summary 19

Chapter 3. Sequencing of Difficult DNA Templates 27

Jan Kieleczawa

Introduction 27

Materials and Methods 29

Materials 29

Results 31

Discussion 32

Chapter 4. New DNA Sequencing Enzymes**35***Sandra L. Spurgeon and John W. Brandis*

Introduction	35
Development of AmpliTaq DNA Polymerase FS and Other Improvements	37
Efforts to Find Better Dye-Labeled Terminators	38
Efforts to Find Better Enzymes	39
Sources of New Polymerases	40
Noneubacterial Genera	40
Other Eubacterial Species: <i>Thermus</i> and <i>Thermotoga</i>	41
Modified Taq Pol I	41
Methods and Materials	43
Enzymes	43
Sequencing Reactions	44
Read Length	44
Peak Height Evenness	44
Results and Discussion	44
Evaluation of Peak Pattern Evenness and Incorporation of Labeled Dideoxynucleotides with Different Enzymes	44
Salt Tolerance	45
Ability to Read Through Difficult Regions	46
Conclusion	48

Chapter 5. Beyond pUC: Vectors for Cloning Unstable DNA**55***Ronald Godiska, Melodee Patterson, Tom Schoenfeld, and David A. Mead*

Introduction	55
Drawbacks of pUC Vectors	56
Vector-Driven Transcription	56
Open Reading Frames (ORFs)	57
Repeats	58
Replication	59
False Positives and False Negatives	59
Insert-Driven Transcription	60
High Copy Number	61
Ampicillin Selection	61
Plasmid Mobilization	61
Instability of AT-Rich DNA	62
Alternative Vectors	63
pSMART	65
pEZSeq	67
pSMART VC	67
pTrueBlue	68
pZerO	70
pTZ, pBlueScript, pGEM	70
Conclusions	70

Chapter 6. Recombination-Based Cloning**77***Vincent Ling*

Introduction	77
--------------	----

Recombination-Based Cloning: Primary Considerations	77
Bacteriophage P1 Cre-Based Single IoxP Recombination-Echo System	80
Bacteriophage P1 Cre-Based Dual IoxP Recombination-Creator System	82
Lambda Phage Recombinase-Gateway System	85
The Future of Recombination Cloning	94
Chapter 7. Plasmid Preparation Methods for DNA Sequencing	99
<i>Parke K. Flick</i>	
Introduction	99
Methods for Low Throughput Preparation of Plasmid DNA	99
Methods for High Throughput Preparation of Plasmid DNA	100
TempliPhi: A New Template Preparation Method without Culturing and Purification	101
Comparison of TempliPhi to Methods Based on Culturing	109
Summary	111
Chapter 8. Optimization of Culture Growth in 96-Deep-Well Plates	117
<i>Jan Kieleczawa</i>	
Introduction	117
Materials and Methods	117
Experimental Parameters Optimized	118
Conclusions	122
Chapter 9. Automated DNA Scanners Used in Sequencing Laboratories	123
<i>Jan Kieleczawa</i>	
Introduction	123
Brief History of Some Automated Scanners	124
DNA Sequencing Instruments—Product Overview	125
Criteria for Selecting a DNA Sequencing Instrument	125
Chapter 10. Geospiza's Finch-Server: A Complete Data Management System for DNA Sequencing	131
<i>Sandra Porter, Joe Slagel, and Todd Smith</i>	
Introduction	131
The Geospiza Finch-Server	132
Data Management for Core Facilities	133
Managing Sequencing Requests	133
Sample Tracking	133
Security	136
Preparation of Sample Sheets and Managing Instrument-Related Data	136
Management of Chromatogram Files and Quality Control	136

Sequencing Instrument Performance 137

Billing 137

Data Management for Large-Scale Sequencing 137

DNA Sequence Assembly 138

Maintaining Updated Sequence Databases 140

The Finch-BLAST Manager 141

Data Management Over the Internet: iFinch 141

Chapter 11. DNA Sequencing Database: A Flexible LIMS for DNA Sequencing Analysis 143

Donald M. Koffman and Hemchand Sookdeo

Introduction 143

Requesting: From Scientist to Sequencer 145

Integrated Primer Inventory and Oligo Design 147

Automated Primer Order Generation and Completion 149

Tube and Plate Format Runs 151

Reporting Results 153

Effort Reporting Based on History of Completed Reactions 154

Summary 155

Chapter 12. Good Laboratory Practices, Good Manufacturing Procedures, and Quality Assurance in the DNA Sequencing Laboratory 157

Michele Godlevski and Thalia Taylor

Introduction 157

Good Laboratory Practices, Good Manufacturing Practices 158

Standard Operation Procedures 160

Quality Assurance 162

Gel-Based System 163

Capillary-Based System 163

Customer Service 164

Corrective and Preventative Action 165

Facility Requirements 167

Training and Personnel 168

Reagents and Solutions 168

Maintenance and Calibration 169

Equipment Qualifications 169

Process and System Validation 170

Change Control 172

Data Collection and Archiving 172

Documentation and Electronic Records 173

Inspections and Audits 174

Costs and Other Considerations for Implementation 175

Information Resources 175

Chapter 13. Future of DNA Sequencing: Towards an Affordable Genome 177*Kevin McKernan*

Introduction 177

Incremental Improvements of Existing Technologies 178

Sequencing Reaction Miniaturization and Capillary Thermal Cycling 178

Other Means for 200-Fold Dilutions 180

Multiplexing 182

Amplification Based Methods 183

Parallel Pyrosequencing 183

Colonies 184

Single Molecule Sequencing by Synthesis 187

Amplification Versus Single Molecule Detection 192

Summary 194
