

Gene Targeting & Embryonic Stem Cells

Edited by A.J. Thomson & J. McWhir

ADVANCED METHODS

Contents

Preface	viii
Abbreviations	ix
1 An Overview of Gene Targeting and Stem Cells	1
<i>Jim McWhir, Alison J. Thomson and David Russell</i>	
1.1 The murine embryonic stem cell system	2
1.2 Human ES cells	2
1.3 Gene targeting and ES cells in other species	4
1.4 Gene targeting	5
1.5 Nuclear transfer	6
1.6 Conclusion	6
2 Advances in Gene Targeting in Murine Embryonic Stem Cells	11
<i>Alan R. Clarke</i>	
2.1 Introduction	11
2.2 Conventional gene-targeting approaches	11
2.3 Conditional alleles	13
2.4 Tracking mutations: coat color tagging	14
2.5 Enhancing gene-targeting efficiency	14
2.6 Targeted mutagenesis using triplex-forming oligonucleotides	16
2.7 Chromosome engineering	17
2.8 High-throughput gene targeting strategies	17
2.9 Summary	20
3 Nuclear Transfer with Murine Embryonic Stem Cells	23
<i>Shaorong Gao</i>	
3.1 Introduction	23
3.2 Factors affecting efficiency of nuclear transfer	24
Protocol 3.1: Preparation of donor cells	35
Protocol 3.2: Oocyte collection	36
Protocol 3.3: Enucleation	37
Protocol 3.4: Microinjection of ES cell nuclei into enucleated MII oocytes	38
Protocol 3.5: Activation of reconstructed oocytes	40
Protocol 3.6: Cloned embryo culture and transfer into surrogate mothers	41
Protocol 3.7: Micromanipulation technique and preparation of tools	42
Protocol 3.8: Alternative method for murine nuclear transfer	43

4	Gene Targeting in Sheep	45
	<i>A. John Clark and Wei Cui</i>	
4.1	Introduction	45
4.2	Growth characteristics of primary somatic cells	46
4.3	Construction and transfection of gene-targeting vectors	46
4.4	Detecting targeted cells	48
4.5	NT with targeted sheep cells	50
4.6	The control of replicative senescence	51
4.7	Telomerase extension of proliferative lifespan	52
4.8	Nuclear transfer with telomerase immortalized cells	55
4.9	Concluding remarks	56
	Protocol 4.1: Isolation of sheep fetal fibroblasts	62
	Protocol 4.2: Electroporation and selection	64
	Protocol 4.3: Colony picking	66
	Protocol 4.4: Preparation of genomic DNA for PCR	67
	Protocol 4.5: Resuscitation of frozen cells from duplicate plate	69
5	RNA Interference	71
	<i>Florence Wianny, Roberta J. Weber and Magdalena Zernicka-Goetz</i>	
5.1	Introduction	71
5.2	The mechanism	71
5.3	RNAi in mammalian somatic cells	73
5.4	RNAi in mammalian embryonic cells	78
5.5	Conclusion	85
	Protocol 5.1: Synthesis of dsRNA <i>in vitro</i>	92
	Protocol 5.2: Microinjection of dsRNA into mouse oocytes and embryos	96
6	Human Embryonal Carcinoma Cells: Surrogate Tools in the Study of Human Embryonic Stem Cells	99
	<i>Jonathan S. Draper and Peter W. Andrews</i>	
6.1	Introduction	99
6.2	Embryonal carcinoma cells from the laboratory mouse	100
6.3	Human embryonal carcinoma cells	103
6.4	Human embryonic stem cells	107
6.5	Surface antigens as tools for analysis of EC cells	108
	Protocol 6.1: Flow cytochemistry and fluorescence-activated cell sorting (FACS)	118
	Protocol 6.2: <i>In situ</i> immunofluorescence staining for surface antigens	122
	Protocol 6.3: RNA <i>in situ</i> hybridization	124
7	Isolation of Human Embryonic Stem Cells	127
	<i>L. Ahrlund-Richter and R. Pederson</i>	
7.1	Introduction	127
7.2	Derivation of hES cells	128
7.3	Towards further optimized conditions	129
	Protocol 7.1: Immunosurgery: Separation of inner cells mass (ICM) from trophoectoderm cells (TE)	134

8	<i>In Vitro</i> Culture and Differentiation of Human Embryonic Stem Cells	141
	<i>Maya Schuldiner and Nissim Benvenisty</i>	
8.1	Introduction	141
8.2	Proliferation of human ES cells	142
8.3	Differentiation of human ES cells	146
8.4	Future prospects	151
	Protocol 8.1: Preparation of media	159
	Protocol 8.2: Passaging of human ES cells	161
	Protocol 8.3: Freezing of MEFs and human ES cells	163
	Protocol 8.4: Thawing of MEFs and human ES cells	164
	Protocol 8.5: Preparation of MEF cells	165
	Protocol 8.6: Preparation of MEF feeder layers	167
	Protocol 8.7: Formation of EBs	168
9	Transfection of Human Embryonic Stem Cells	171
	<i>Helen Priddle</i>	
9.1	Introduction	171
9.2	Progress towards efficient transfection of hES cells	173
9.3	Future of gene targeting in human ES cells	177
	Protocol 9.1: Feeder-free culture of hES cells	184
	Protocol 9.2: Preparation of DNA for transfection	188
	Protocol 9.3: Assessment of transfection protocols by transient transfection	190
	Protocol 9.4: Optimization of antibiotic concentrations	192
	Protocol 9.5: Lipofection	193
	Protocol 9.6: Electroporation using gene pulser	195
	Protocol 9.7: Electroporation using multiporator	197
	Protocol 9.8: Expansion of hES colonies	200
	Index	203
