

MYCORRHIZAS:
Anatomy and Cell Biology

R. Larry Peterson, Hugues B. Massicotte,
Lewis H. Melville

Contents

Preface, vii

Introduction, 1

- Root–microorganism interactions are ubiquitous, 1
- Mycorrhizal categories, 1
- Dark septate fungal endophytes, 2
- Microscopy, 2
- Organization of book, 2
- References, 2
- Recent specialized books on mycorrhizas, 3

Box : Mycorrhizas – the most prevalent symbiosis on earth, 4

Chapter 1. Ectomycorrhizas, 5

- A. Introduction, 7
 - 1. Definition, 7
 - 2. Plant species involved, 7
 - 3. Fungal species involved, 8
- B. Morphology of ectomycorrhizas, 8
- C. Mantle, 9
- D. Hartig net, 22
- E. Extraradical mycelium, 23
- F. Specialized ectomycorrhizas – tuberculate mycorrhizas, 38

Box 1: The polyphosphate controversy, 30

Box 2: Are water and nutrients able to pass through the mantle?, 31

Box 3: Root cells may respond to mycorrhizal fungi by developing as transfer cells, 32

Box 4: Can ectomycorrhizal fungi really eat rocks?, 39

Box 5: Growing ectomycorrhizal fungi in the lab, 42

Chapter 2. Ectendomycorrhizas, 43

- A. Introduction, 45
 - 1. Definition, 45
 - 2. Plant species involved, 45
 - 3. Fungal species involved, 45
- B. Structural characteristics, 45
- C. Functions, 54

Chapter 3. Arbuscular mycorrhizas, 55

- A. Introduction, 57
 - 1. Definition, 57
 - 2. Plant species involved, 57
 - 3. Fungal species involved, 58
- B. Intraradical hyphae, 58
- C. Arbuscules, 64
- D. Intraradical vesicles, 70
- E. Extraradical vesicles, 70
- F. Extraradical mycelium, 71
- G. Spores, 76

Box 6: Do the lower plants have arbuscular mycorrhizas?, 62

Box 7: Use of 'hairy roots' in studies with arbuscular mycorrhizal fungi, 63

Box 8: Plant mutants help unravel colonization events in arbuscular mycorrhizas, 65

Box 9: What is the nature of the interface between arbuscular mycorrhizal fungi and root cells?, 68

Box 10: Arbuscular mycorrhizal fungi harbour intracellular bacteria, 69

Box 11: Dynamic changes in the plant cytoskeleton, 77

Chapter 4. Ericoid mycorrhizas, 81

- A. Introduction, 83
 - 1. Definition, 83
 - 2. Plant species involved, 83
 - 3. Fungal species involved, 86
- B. Development and structure, 86
- C. Extraradical mycelium, 89
- D. Functions, 89

Box 12: Liverworts and ericoid species can share common fungal symbionts, 87

Box 13: Investigating the identity of ericoid mycorrhizal fungi, 94

Box 14: Ericoid mycorrhizal fungi access various sources of nitrogen, 95

Chapter 5. Arbutoid mycorrhizas, 97

- A. Introduction, 99
 - 1. Definition, 99
 - 2. Plant species involved, 99
 - 3. Fungal species involved, 99
- B. Development and structure, 99
- C. Functions, 100

Chapter 6. Monotropoid mycorrhizas, 109

- A. Introduction, 111
 - 1. Definition, 111
 - 2. Plant species involved, 111
 - 3. Fungal species involved, 111
- B. Development and structure, 112
- C. Functions, 113

Chapter 7. Orchid mycorrhizas, 123

- A. Introduction, 125
 - 1. Definition, 125
 - 2. Plant species involved, 125
 - 3. Fungal species involved, 125
- B. Orchid seed germination and protocorm formation, 130
- C. Seedling establishment and mature plants, 131
- D. Functioning of orchid mycorrhizas, 131

Box 15: Orchids as 'cheaters', 143

Box 16: Mycorrhizal fungi alter the cytology of orchid cells, 144

Chapter 8. Dark septate fungal endophytes, 145

- A. Introduction, 147
 - 1. Definition, 147
 - 2. Plant species involved, 147
 - 3. Fungal species involved, 147
- B. Colonization of roots, 148
- C. Functions, 148
