

**HYDRAULICS IN CIVIL AND  
ENVIRONMENTAL ENGINEERING**

**FOURTH EDITION**

**Andrew Chadwick, John Morfett  
and Martin Borthwick**

**SPON**

# Contents

Preface	x
Preface to the third edition	xi
Preface to the second edition	xiv
Preface to the first edition	xvi
Principal symbols	xviii
A short history of hydraulics	xxiv
Introductory notes	xxvii

## Part One Principles and Basic Applications

1	Hydrostatics	3
1.1	Pressure	3
1.2	Pressure measurement	5
1.3	Pressure forces on submerged bodies	8
1.4	Flotation	14
2	Principles of fluid flow	21
2.1	Introduction	21
2.2	Classification of flows	21
2.3	Visualization of flow patterns	22
2.4	The fundamental equations of fluid dynamics	24
2.5	Application of the conservation laws to fluid flows	25
2.6	Application of the energy equation	32
2.7	Application of the momentum equation	36
2.8	Velocity and discharge measurement	42
2.9	Potential flows	48
2.10	Some typical flow patterns	52
	References and further reading	63
3	Behaviour of real fluids	64
3.1	Real and ideal fluids	64
3.2	Viscous flow	66
3.3	The stability of laminar flows and the onset of turbulence	68

3.4	Shearing action in turbulent flows	71
3.5	The boundary layer	76
3.6	Some implications of the boundary layer concept	84
3.7	Cavitation	88
3.8	Surface tension effects	89
3.9	Summary	89
	References and further reading	89
4	Flow in pipes and closed conduits	91
4.1	Introduction	91
4.2	The historical context	91
4.3	Fundamental concepts of pipe flow	94
4.4	Laminar flow	97
4.5	Turbulent flow	100
4.6	Local head losses	112
4.7	Partially full pipes	116
	References and further reading	121
5	Open channel flow	122
5.1	Flow with a free surface	122
5.2	Flow classification	122
5.3	Natural and artificial channels and their properties	123
5.4	Velocity distributions, energy and momentum coefficients	126
5.5	Laminar and turbulent flow	127
5.6	Uniform flow	129
5.7	Rapidly varied flow: the use of energy principles	138
5.8	Rapidly varied flow: the use of momentum principles	150
5.9	Critical depth meters	155
5.10	Gradually varied flow	158
5.11	Unsteady flow	180
	References and further reading	184
6	Pressure surge in pipelines	185
6.1	Introduction	185
6.2	Effect of 'rapid' valve closure	188
6.3	Unsteady compressible flow	188
6.4	Analysis of more complex problems	197
6.5	Concluding remarks	200
	References and further reading	201
7	Hydraulic machines	202
7.1	Classification of machines	202
7.2	Continuous flow pumps	202
7.3	Performance data for continuous flow pumps	208

7.4	Pump selection	210
7.5	Hydro-power turbines	210
7.6	Turbine selection	213
7.7	Cavitation in hydraulic machines	214
	References and further reading	215
8	Wave theory	216
8.1	Wave motion	216
8.2	Linear wave theory	219
8.3	Wave transformation and attenuation processes	225
8.4	Surf zone processes	244
8.5	Analysis of wave records: short-term wave statistics	256
8.6	Wave prediction from wind records	268
8.7	Long-term wave statistics	274
8.8	Prediction of extreme still water levels	279
	References and further reading	281
9	Sediment transport	283
9.1	Introduction	283
9.2	The threshold of movement	283
9.3	A general description of the mechanics of sediment transport	287
9.4	Sediment transport equations	292
9.5	Concluding notes on sediment transport	304
	References and further reading	306
10	Flood hydrology	308
10.1	Classifications	308
10.2	Methods of flood prediction for rural catchments	309
10.3	Catchment descriptors	310
10.4	Frequency analysis	313
10.5	Unit hydrograph theory	329
10.6	Summary of design flood procedures for rural catchments	347
10.7	Flood routing	347
10.8	Design floods for reservoir safety	359
10.9	Methods of flood prediction for urban catchments	361
10.10	Climate change impacts in flood hydrology	367
	References and further reading	368
11	Dimensional analysis and the theory of physical models	371
11.1	Introduction	371
11.2	The idea of 'similarity'	372
11.3	Dimensional homogeneity and its implications	373
11.4	Dimensional analysis	374

11.5	Dimensional analysis involving more variables	378
11.6	Applications of dynamic similarity	379
11.7	Hydraulic models	387
	References and further reading	397
<b>Part Two Aspects of Hydraulic Engineering</b>		
12	Pipeline systems	401
12.1	Introduction	401
12.2	Design of a simple pipe system	401
12.3	Series, parallel and branched pipe systems	404
12.4	Distribution systems	408
12.5	Design of pumping mains	415
12.6	Surge protection	421
	References and further reading	428
13	Hydraulic structures	430
13.1	Introduction	430
13.2	Thin plate (sharp-crested) weirs	430
13.3	Long-based weirs	440
13.4	Flumes	445
13.5	Spillways	452
13.6	Stepped spillways	465
13.7	Energy dissipators	465
13.8	Control gates	468
13.9	Lateral discharge structures	474
13.10	Outlet structures	478
13.11	Concluding remarks	479
	References and further reading	479
14	Computational hydraulics	481
14.1	Overview	481
14.2	Mathematical models and numerical models	482
14.3	Derivation of conservation equations	483
14.4	Differential equations and finite difference schemes	487
14.5	Boundary conditions and initial conditions	495
14.6	Applications of computational hydraulics	495
14.7	Concluding notes	521
	References and further reading	524
15	River and canal engineering	525
15.1	Introduction	525
15.2	Optimization of a channel cross-section	525
15.3	Unlined channels	527

15.4	The design of stable alluvial channels	530
15.5	Morphology of natural channels	536
15.6	Computational river modelling	541
15.7	Flood discharges in compound channels	547
15.8	River engineering	553
	References and further reading	557
	Appendix 15.A: Published work on the SERC Flood Channel Facility	559
16	Coastal engineering	562
16.1	Introduction	562
16.2	The action of waves on beaches	562
16.3	Sediment transport	563
16.4	Shoreline evolution modelling	568
16.5	Natural bays, coastal cells and shoreline management planning	571
16.6	Understanding coastal system behaviour	574
16.7	Coastal defence principles	575
16.8	Coastal defence techniques	577
16.9	Wave modelling	587
	References and further reading	592
17	Water quality modelling	595
17.1	Introduction	595
17.2	Dispersion processes	595
17.3	Dispersion in a one-dimensional stream	597
17.4	Two-dimensional modelling	602
17.5	Differential density effects	604
17.6	Buoyant jets	604
17.7	Intrusion due to density currents	608
17.8	Concluding note	610
	References and further reading	610
	Postscript	613
	Problems for solution	614
	Appendix A: Moments of area	631
	Index	634
