

INTERNATIONAL ENERGY AGENCY

DISTRIBUTED GENERATION IN LIBERALISED ELECTRICITY MARKETS

TABLE OF CONTENTS

EXECUTIVE SUMMARY	7
1 INTRODUCTION	19
2 DISTRIBUTED-GENERATION TECHNOLOGIES	25
3 ECONOMICS OF DISTRIBUTED GENERATION	33
4 DISTRIBUTED GENERATION IN JAPAN, THE US, THE NETHERLANDS, AND THE UK	53
5 POLICY ISSUES	72
6 FUTURE OF DISTRIBUTED GENERATION	97
7 CONCLUSIONS AND RECOMMENDATIONS	101
ANNEX I	109
Comparing Energy Consumption and Emissions from CHP, and Conventional Heat and Power Generation	109

LIST OF TABLES

1. Distributed-Generation Technology Data	26
2. Costs of Various Distributed-Generation Technologies	37
3. Capital Costs and Efficiencies of CHP Technologies	42

4. European Union CHP 1998	44
5. Cost of a One-Hour Power Outage for Different US Businesses	49
6. Economics of Gas CHP in Japan	54
7. Cogeneration System Capacity (in MW) by Sector and Generator Type	55
8. Comparison of Distributed-Generation Issues in Japan, the US, the Netherlands, and the UK	71
9. Estimates of "Embedded Benefit" to UK Distributed Generators (USD per MWh)	79
10. New South Wales (Australia) Distribution Loss Factors	85
11. Japanese NO _x Limits on Cogeneration Systems	89
11. Examples of NO _x Limits in the US Applicable to Distributed Generation (in kg/MWh)	90

LIST OF FIGURES

1. Distributed Generation in an Electricity Network	21
2. Orders for Engines and Turbines, 1-30 MW, for Peaking or Continuous Use, 1998/99 – 2000/01	31
3. Ratio of Industrial Fuel to Electricity Prices in Selected Countries	34
4. Ratio of Household Fuel to Electricity Prices in Selected Countries	35
5. Comparison of PV Costs/Output to Household Electricity Rates in Selected OECD Countries	38
6. NO _x Emissions from Distributed-Generation Technologies (kg per MWh)	88
7. CO ₂ Emissions from Distributed-Generation Technologies (kg per MWh)	91
