

Mastering SIMULINK®

JAMES B. DABNEY
THOMAS L. HARMAN

Contents

Preface	xvii
Using the Book	xvii
New Users	xvii
Experienced Users	xviii
Advanced Users	xviii
Acknowledgments	xix
1 Introduction	1
1.1 What Is Simulink?	1
1.2 Simulink Examples	2
1.2.1 Steel Rolling Plant Modeling	2
1.2.2 Automotive Engine Modeling	3
1.3 Simulink Employment Strategies	4
1.3.1 Rapid Prototyping	4
1.3.2 Rapid Application Development	5
1.4 Selection Considerations	5
1.5 Outline of Text	6
References	6
2 Block Diagrams	7
2.1 Introduction	7
2.2 Continuous Systems	8
2.2.1 Gain Blocks	8
2.2.2 Sum Block	9
2.2.3 Derivative Block	9
2.2.4 Integrator	10
2.2.5 Simple Physical Models	11
2.2.6 Transfer Function Block	11
2.3 State-Space Block	13
2.3.1 The State-Space Concept	13
2.3.2 Linear Single-Input, Single-Output Systems	15
2.3.3 Multiple Input, Multiple Output Systems	18
2.4 Discrete Systems	20
2.4.1 Discrete Gain Block	22
2.4.2 Discrete Sum Block	22

x Contents

2.4.3	Unit Delay	22
2.4.4	Discrete-Time Integrator Block	23
2.4.5	Simple Discrete System Models	24
2.4.6	Discrete Transfer Function Block	25
2.5	Discrete State-Space Block	26
2.6	Nonlinear Blocks	28
2.7	Hybrid Block Diagrams	28
2.8	Summary	30
	References	30
3	Quick Start	32
3.1	Introduction	32
3.1.1	Typographical Conventions	32
3.2	Building a Simple Model	33
3.3	A More Complicated Model	38
3.4	The Simulink Help System	46
3.4.1	Opening the User's Guide Browser	46
3.4.2	User's Guide Browser Window	47
3.5	Summary	48
	References	48
4	Model Building	49
4.1	Introduction	49
4.1.1	Elements of a Model	49
4.2	Opening a Model	50
4.3	Model Window	50
4.3.1	Zooming	52
4.3.2	Block Data Tips	52
4.3.3	Simulink Block Library	52
4.4	Manipulating Blocks	53
4.4.1	Resizing a Block	53
4.4.2	Rotating a Block	54
4.4.3	Copying a Block within a Model	54
4.4.4	Deleting Blocks	55
4.4.5	Selecting Multiple Blocks	55
4.4.6	Changing a Block Label	56
4.4.7	Changing Label Location	57
4.4.8	Hiding a Label	57
4.4.9	Adding a Drop Shadow	57
4.4.10	Using Color	58
4.4.11	Configuring Blocks	58
4.5	Signal Lines	58
4.5.1	Moving a Segment	59
4.5.2	Moving a Vertex	61
4.5.3	Deleting a Signal Line	61
4.5.4	Splitting a Signal Line	62
4.5.5	Labeling a Signal Line	62

4.5.6	Moving or Copying a Signal Line Label	63
4.5.7	Editing a Signal Line Label	64
4.5.8	Signal Label Propagation	64
4.6	Annotations	65
4.6.1	Adding Annotations	65
4.6.2	Annotation Formatting	66
4.7	Adding Sources	66
4.7.1	Common Sources	66
4.7.2	From Workspace Block	68
4.7.3	From File Input Block	70
4.8	Adding Sinks	70
4.8.1	Scope Block	70
4.8.2	XY Graph	75
4.9	Data Types	75
4.10	Configuring the Simulation	77
4.10.1	Solver Page	78
4.10.2	Workspace I/O Page	80
4.10.3	Diagnostics Page	82
4.10.4	Advanced Page	83
4.11	Running a Simulation	84
4.12	Printing a Model	85
4.12.1	Printing to the Printer Using Menus	85
4.12.2	Embedding the Model in a Document	86
4.12.3	Using the MATLAB Print Command	86
4.13	Model Building Summary	88
4.14	Summary	89
	References	89
5	Continuous Systems	90
5.1	Introduction	90
5.2	Scalar Linear Systems	90
5.2.1	Integrator Block	90
5.2.2	Transfer Function Blocks	94
5.3	Vector Linear Systems	96
5.3.1	Vector Signal Lines	96
5.3.2	State-Space Block	98
5.4	Modeling Nonlinear Systems	98
5.4.1	Function Blocks	102
5.5	Summary	105
	References	106
6	Discrete-Time Systems	107
6.1	Introduction	107
6.1.1	Scalar Linear Discrete-Time Systems	107
6.1.2	Unit Delay	108
6.1.3	Discrete-Time Integrator	108
6.1.4	Discrete Transfer Function Blocks	110

6.2	Logical Blocks	112
6.3	Vector Discrete-Time Systems	114
6.4	Multirate Discrete-Time Systems	114
6.5	Hybrid Systems	116
6.6	Summary	118
	References	119
7	Subsystems and Masking	120
7.1	Introduction	120
7.2	Simulink Subsystems	120
7.2.1	Encapsulating a Subsystem	122
7.2.2	Subsystem Blocks	124
7.3	Masked Blocks	126
7.3.1	Converting a Subsystem into a Masked Subsystem	128
7.3.2	Mask Editor Documentation Page	128
7.3.3	Parameters Page	129
7.3.4	Initialization Page	134
7.3.5	Mask Editor Icon Page	137
7.3.6	Looking Under and Removing Masks	145
7.3.7	Using Masked Blocks	145
7.3.8	Creating a Block Library	146
7.3.9	Configurable Subsystems	148
7.4	Conditionally Executed Subsystems	151
7.4.1	Enabled Subsystems	151
7.4.2	Triggered Subsystems	155
7.4.3	Trigger-When-Enabled Subsystems	156
7.4.4	Discrete Conditionally Executed Subsystems	156
7.5	Logical Subsystems	156
7.6	Iterative Subsystems	157
7.6.1	For Iterator Subsystem	157
7.6.2	While Iterator Subsystem	158
7.7	Summary	161
	References	161
8	Simulink Analysis Tools	162
8.1	Introduction	162
8.2	Determining Model Characteristics	162
8.2.1	Simulink State Vector Definition	162
8.2.2	Using the model Command	163
8.3	Executing Models from MATLAB	167
8.3.1	Using <code>sim</code> to Run a Simulation	167
8.4	Setting Simulation Parameters with <code>simset</code>	169
8.4.1	Obtaining Simulation Parameters with <code>simget</code>	172
8.5	Linearization Tools	176
8.5.1	Linearization	176
8.5.2	Simulink Linearization Commands	177
8.6	Trim Tools	186

8.7	Optimization Toolbox and Simulink	192
8.8	Other Toolboxes Useful with Simulink	195
8.9	Summary	195
	References	195
9	Callbacks	197
9.1	Introduction	197
9.2	Callback Function Overview	197
9.2.1	Callback Installation Dialog Boxes	197
9.2.2	Installing Callbacks Using <code>set_param</code>	198
9.3	Model Construction Commands	201
9.3.1	Finding the Name of the Current Block	201
9.3.2	Finding the Name of the Current Model	202
9.3.3	Finding the Name of the Current System	202
9.3.4	Setting Parameter Values	203
9.3.5	Reading Parameter Values	203
9.4	Graphical User Interfaces with Callbacks	204
9.4.1	Graphic User Interface Callback	204
9.4.2	Programming Issues	207
9.5	Callback-Based Animations	215
9.6	Summary	218
	References	218
10	S-Functions	219
10.1	Introduction	219
10.2	S-Function Block	219
10.3	S-Function Overview	220
10.4	M-file S-Functions	221
10.4.1	Initialization (<code>flag = 0</code>)	222
10.4.2	Continuous State Derivatives (<code>flag = 1</code>)	224
10.4.3	Discrete State Updates (<code>flag = 2</code>)	224
10.4.4	Block Outputs (<code>flag = 3</code>)	225
10.4.5	Next Sample Time (<code>flag = 4</code>)	226
10.4.6	Terminate (<code>flag = 9</code>)	226
10.4.7	Programming Considerations	226
10.4.8	M-file S-Function Examples	227
10.5	C Language S-Functions	235
10.5.1	C File Header	239
10.5.2	Initializing the Simulation Structure	240
10.5.3	Defining Sample Times and Offsets	242
10.5.4	Accessing Model Variables	243
10.5.5	Setting Initial Conditions	244
10.5.6	Setting the Output Vector	244
10.5.7	Updating the Discrete States	245
10.5.8	Computing the State Derivatives	245
10.5.9	End-of-Simulation Tasks	246
10.5.10	C S-Function File Trailer	246

10.5.11	Programming Considerations	246
10.5.12	Compiling a C S-Function	250
10.5.13	C S-Function Examples	250
10.6	Summary	258
	References	258
11	Graphical Animations	259
11.1	Introduction	259
11.2	S-Function Animations	259
11.2.1	Animation S-Function Initialization	260
11.2.2	Animation S-Function Updates	261
11.3	Animation Toolbox	265
11.3.1	Obtaining the Animation Toolbox	265
11.3.2	Using the Animation Toolbox	265
11.3.3	Animation Object Properties	268
11.3.4	Configuring an Animation	268
11.3.5	Modifying an Animation	268
11.3.6	Setting Initial Inputs	269
11.3.7	Saving and Loading Animation Files	269
11.4	Dials & Gauges Blockset	269
11.5	Virtual Reality Toolbox	271
11.6	Summary	272
	References	272
12	Debugging	273
12.1	Introduction	273
12.2	Finding Model-Building Errors	273
12.3	Finding Implementation Problems	275
12.3.1	Simulink Execution Errors	275
12.3.2	Slow Execution	275
12.3.3	Incorrect Results	277
12.4	Simulink Debugger	277
12.4.1	Running the Debugger	278
12.4.2	Block Index	279
12.4.3	Single-Step Execution	280
12.4.4	Breakpoints	281
12.4.5	Inspecting Block Data	283
12.4.6	Algebraic Loop Commands	283
12.4.7	Debugger Status Commands	284
12.4.8	Ending Debugging	284
12.4.9	Debugger Command Summary	284
12.5	Summary	286
13	Numerical Issues	287
13.1	Introduction	287
13.2	Choosing a Solver	287

13.3	Algebraic Loops	293
13.3.1	Newton–Raphson Method	294
13.3.2	Eliminating Algebraic Loops	295
13.4	Multiple Sample Time Issues	298
13.5	Zero-Crossing Detection	299
13.6	Summary	299
	References	299
14	Introduction to Stateflow	301
14.1	Introduction	301
14.2	Finite State Machines	301
14.3	State Transition Diagrams	302
14.4	Stateflow Charts	303
14.4.1	Stateflow Chart Hierarchy	305
14.4.2	Compound Transitions	307
14.4.3	Inner Transitions	308
14.5	Stateflow Quick Start	308
14.6	Drawing Stateflow Charts	314
14.6.1	State Boxes	314
14.6.2	Transitions	315
14.6.3	Connective Junctions	316
14.6.4	Default Transitions	316
14.6.5	History Junctions	316
14.6.6	Specifying Parallel Decomposition	316
14.7	Labeling States and Transitions	317
14.7.1	State Labels	317
14.7.2	Transition Labels	318
14.8	Stateflow Explorer	318
14.9	Interfacing with Simulink	318
14.9.1	Inputs	319
14.9.2	Outputs	319
14.10	Chart Update Options	320
14.11	Flowcharts	322
14.12	Graphical Functions	326
14.13	Printing Stateflow Charts	327
14.14	Stateflow Debugger	327
14.15	Summary	328
	References	329
15	Introduction to Real-Time Workshop	330
15.1	Introduction	330
15.1.1	Development Scenarios	330
15.1.2	Build Process	331
15.2	Generic Real-Time Target	332
15.2.1	Stand-Alone GRT Target	332
15.2.2	Running the Stand-Alone GRT Model	333
15.2.3	Using External Mode	335

15.3	Rapid Simulation Target	336
15.3.1	Basketball Dynamical System	336
15.3.2	Basketball Simulink Model	337
15.3.3	Building the Rapid Simulation Target	338
15.3.4	Rapid Simulation Options	339
15.3.5	Minimizing Miss Distance	341
15.4	xPC Target	342
15.4.1	Initialization	342
15.4.2	Building a Target	343
15.4.3	Starting Target	345
15.4.4	Controlling the Target	345
15.5	Summary	347
	References	347
Appendix A Block Reference		348
A.1	Continuous Block Library	348
A.2	Discontinuities Block Library	349
A.3	Discrete Block Library	350
A.4	Lookup Tables Block Library	351
A.5	Math Operations Block Library	352
A.6	Ports & Subsystems Block Library	354
A.7	Signal Attributes Block Library	356
A.8	Signal Routing Block Library	357
A.9	Sinks Block Library	358
A.10	Sources Block Library	359
A.11	User-Defined Functions Block Library	361
