

An Introduction to Ocean Remote Sensing

Seelye Martin

CAMBRIDGE

Contents

<i>Preface</i>	<i>page</i> xi
<i>List of chemical symbols</i>	xiv
<i>List of mathematical symbols</i>	xv
<i>List of abbreviations and acronyms</i>	xxii
1 Background	1
1.1 Introduction	1
1.2 Definition of remote sensing	3
1.3 Satellite orbits	4
1.4 Geosynchronous satellites	8
1.5 US sun-synchronous satellites	10
1.6 Imaging techniques	12
1.7 Processing of the imager data	17
1.8 Past, present and pending satellite missions	18
1.9 Further reading and acknowledgements	27
2 Ocean surface phenomena	28
2.1 Introduction	28
2.2 Ocean surface winds and waves	28
2.3 Ocean currents, geostrophy and sea surface height	38
2.4 Sea ice	42
2.5 Further reading and acknowledgements	45
3 Electromagnetic radiation	46
3.1 Introduction	46
3.2 Descriptions of electromagnetic radiation	46
3.3 Ways to describe EMR	54
3.4 Radiation from a perfect emitter	58
3.5 The ideal instrument	63
3.6 Further reading	70
4 Atmospheric properties and radiative transfer	71
4.1 Introduction	71
4.2 Description of the atmosphere	71
4.3 Molecular absorption and emission	78

4.4	Scattering	82
4.5	Atmospheric attenuation	86
4.6	Application to the ideal instrument	90
4.7	Radiative transfer equation	92
4.8	Specific solutions of the radiative transfer equation	95
4.9	Diffuse transmittance and skylight	101
4.10	Further reading and acknowledgements	103
5	Reflection, transmission and absorption at the atmosphere/ocean interface	104
5.1	Introduction	104
5.2	The interface	106
5.3	Transmission across an interface	112
5.4	Absorption and scattering properties of seawater	116
5.5	Two kinds of remote sensing reflectance	122
5.6	Reflection from foam	123
5.7	Further reading and acknowledgements	123
6	Ocean color	124
6.1	Introduction	124
6.2	Scattering and absorption by phytoplankton, particles and dissolved material	126
6.3	Ocean color satellite instruments	133
6.4	Atmospheric correction and retrieval of the water-leaving radiance	142
6.5	Chlorophyll reflectance and fluorescence	150
6.6	Ocean color algorithms	152
6.7	Examples of satellite images	160
6.8	Further reading and acknowledgements	165
7	Infrared observations of sea surface temperature (SST)	166
7.1	Introduction	166
7.2	What is SST?	169
7.3	Properties of AVHRR and MODIS bands used in SST retrieval	171
7.4	Atmosphere and ocean properties in the infrared	173
7.5	SST operational algorithms	178
7.6	Along-Track Scanning Radiometer	188
7.7	Cloud detection algorithms	189
7.8	Illustrations and examples	193
7.9	Further reading and acknowledgements	196
8	Introduction to microwave imagers	197
8.1	Introduction	197
8.2	General antenna properties	198
8.3	Measurement of the surface radiance with an antenna	203
8.4	Conical scanners and microwave surface emissivity	205
8.5	Antenna pattern correction (APC)	206

8.6	Passive microwave imagers	209
8.7	Further reading and acknowledgements	217
9	Passive microwave observations of the atmosphere and ocean surface	218
9.1	Background	218
9.2	Atmospheric absorption and transmissivity in the microwave	218
9.3	Radiative transfer in the microwave	224
9.4	Dependence of the emissivity on surface waves and foam	228
9.5	Temperature and salinity	237
9.6	Open ocean algorithms	239
9.7	Sea ice algorithms	242
9.8	Further reading and acknowledgements	248
10	Introduction to radars	249
10.1	Introduction	249
10.2	Radar equation	250
10.3	Determination of σ_0 within an FOV	254
10.4	Range binning	255
10.5	Doppler binning	259
10.6	Oceanic backscatter	264
10.7	Further reading and acknowledgements	270
11	Scatterometer observations	271
11.1	Introduction	271
11.2	Background	272
11.3	How scatterometers derive the wind velocity	277
11.4	NSCAT scatterometer	282
11.5	AMI scatterometer	284
11.6	SeaWinds scatterometer	286
11.7	Relative advantages and disadvantages of AMI, NSCAT and SeaWinds	290
11.8	Accuracy of the wind retrievals	291
11.9	Applications and examples	294
11.10	Further reading and acknowledgements	296
12	The altimeter	298
12.1	Introduction	298
12.2	Shape of the Earth	299
12.3	Past, present and future altimetric satellites	304
12.4	TOPEX/POSEIDON	304
12.5	JASON-1	313
12.6	Altimeter pulse interaction with a specular sea surface	314
12.7	Effect of waves on the altimeter return	318
12.8	Errors and biases in retrieval of sea surface height	322
12.9	Applications and examples	328
12.10	Further reading and acknowledgements	331

13	Imaging radars	332
13.1	Introduction	332
13.2	Background	333
13.3	SLR resolution	339
13.4	How the SAR achieves its resolution	340
13.5	RADARSAT SAR	346
13.6	Applications and examples	351
13.7	Satellite SARs 2002–2005	363
13.8	Further reading and acknowledgements	364
14	Future oceanographic satellite systems: 2004 to 2019	365
14.1	Introduction	365
14.2	POES to NPOESS transition	366
14.3	NPOESS oceanographic instruments	370
14.4	GLAS and SIRAL altimeters	377
14.5	JASON-2/Ocean Surface Topography Mission (OSTM)	380
14.6	Sea surface salinity	381
14.7	Argo: a global array of ocean interior profiling floats	385
14.8	Global Change Observation Mission-B (GCOM-B)	385
14.9	Future missions	385
14.10	Final thoughts	390
14.11	Further reading and acknowledgements	390
	<i>Appendix</i>	392
	<i>References</i>	395
	<i>Index</i>	411

The plates will be found between pages 196 and 197
