

Geographic Information Analysis

David O'Sullivan and David J. Unwin

Contents

Preface	ix
1 Geographic Information Analysis and Spatial Data	1
Chapter Objectives	1
1.1 Introduction	2
1.2 Spatial Data Types	4
1.3 Scales for Attribute Description	11
1.4 GIS Analysis, Spatial Data Manipulation, and Spatial Analysis	17
1.5 Conclusion	22
Chapter Review	23
References	24
2 The Pitfalls and Potential of Spatial Data	26
Chapter Objectives	26
2.1 Introduction	27
2.2 The Bad News: The Pitfalls of Spatial Data	28
2.3 The Good News: The Potential of Spatial Data	34
2.4 Preview: The Variogram Cloud and the Semivariogram	45
Chapter Review	49
References	49
3 Fundamentals: Maps as Outcomes of Processes	51
Chapter Objectives	51
3.1 Introduction	52
3.2 Processes and the Patterns They Make	53
3.3 Predicting the Pattern Generated by a Process	58
3.4 More Definitions	64
3.5 Stochastic Processes in Lines, Areas, and Fields	66
3.6 Conclusion	73
Chapter Review	75
References	75

4	Point Pattern Analysis	77
	Chapter Objectives	77
4.1	Introduction	78
4.2	Describing a Point Pattern	79
4.3	Density-Based Point Pattern Measures	81
4.4	Distance-Based Point Pattern Measures	88
4.5	Assessing Point Patterns Statistically	95
4.6	Two Critiques of Spatial Statistical Analysis	108
4.7	Conclusion	110
	Chapter Review	112
	References	113
5	Practical Point Pattern Analysis	115
	Chapter Objectives	115
5.1	Point Pattern Analysis versus Cluster Detection	116
5.2	Extensions of Basic Point Pattern Measures	123
5.3	Using Density and Distance: Proximity Polygons	126
5.4	Note on Distance Matrices and Point Pattern Analysis	129
5.5	Conclusion	132
	Chapter Review	132
	References	133
6	Lines and Networks	135
	Chapter Objectives	135
6.1	Introduction	136
6.2	Representing and Storing Linear Entities	137
6.3	Line Length: More Than Meets the Eye	142
6.4	Connection in Line Data: Trees and Graphs	152
6.5	Statistical Analysis of Geographical Line Data	161
6.6	Conclusion	163
	Chapter Review	164
	References	165
7	Area Objects and Spatial Autocorrelation	167
	Chapter Objectives	167
7.1	Introduction	168
7.2	Types of Area Object	169
7.3	Geometric Properties of Areas	173
7.4	Spatial Autocorrelation: Introducing the Joins Count Approach	180
7.5	Fully Worked Example: The 2000 U.S. Presidential Election	192
7.6	Other Measures of Spatial Autocorrelation	196

7.7	Local Indicators of Spatial Association	203
	Chapter Review	205
	References	206
8	Describing and Analyzing Fields	209
	Chapter Objectives	209
8.1	Introduction	210
8.2	Modeling and Storing Field Data	213
8.3	Spatial Interpolation	220
8.4	Derived Measures on Surfaces	234
8.5	Conclusion	242
	Chapter Review	243
	References	244
9	Knowing the Unknowable: The Statistics of Fields	246
	Chapter Objectives	246
9.1	Introduction	247
9.2	Review of Regression	248
9.3	Regression on Spatial Coordinates: Trend Surface Analysis	256
9.4	Statistical Approach to Interpolation: Kriging	265
9.5	Conclusion	281
	Chapter Review	282
	References	283
10	Putting Maps Together: Map Overlay	284
	Chapter Objectives	284
10.1	Introduction	285
10.2	Polygon Overlay and Sieve Mapping	287
10.3	Problems in Simple Boolean Polygon Overlay	302
10.4	Toward a General Model: Alternatives to Boolean Overlay	304
10.5	Conclusion	311
	Chapter Review	312
	References	312
11	Multivariate Data, Multidimensional Space, and Spatialization	315
	Chapter Objectives	315
11.1	Introduction	316
11.2	Multivariate Data and Multidimensional Space	317
11.3	Distance, Difference, and Similarity	323

11.4	Cluster Analysis: Identifying Groups of Similar Observations	327
11.5	Spatialization: Mapping Multivariate Data	336
11.6	Reducing the Number of Variables: Principal Components Analysis	343
11.7	Conclusion	352
	Chapter Review	353
	References	355
12	New Approaches to Spatial Analysis	356
	Chapter Objectives	356
12.1	Introduction	357
12.2	Geocomputation	361
12.3	Spatial Models	370
12.4	Conclusion	378
	Chapter Review	379
	References	380
A	The Elements of Statistics	384
A.1	Introduction	384
A.2	Describing Data	388
A.3	Probability Theory	392
A.4	Processes and Random Variables	396
A.5	Sampling Distributions and Hypothesis Testing	402
A.6	Example	406
	Reference	411
B	Matrices and Matrix Mathematics	412
B.1	Introduction	412
B.2	Matrix Basics and Notation	412
B.3	Simple Mathematics	415
B.4	Solving Simultaneous Equations Using Matrices	420
B.5	Matrices, Vectors, and Geometry	425
	Reference	430
	Index	431
