Contents

Preface	xi
Chapter 1 Introduction	1
1.1 Overview	1
1.2 Terminology	2
1.3 Levels of Thinking	3
1.4 Logic Tools	4
1.5 Formulation of Models	6
1.6 Computational Complexity	7
1.7 Software	7
1.8 Suggested Reading Sequences	8
Part I Logic Problems	9
Chapter 2 Introduction to Logic and Problems	
SAT and MINSAT	11
2.1 Overview	11
2.2 Propositional Logic	12
2.3 First-order Logic	18
2.4 Classification of Propositional Formulas	20
2.5 Theorem Proving and Decision Making	21
2.6 Logic Minimization	25

2.7	Other Kinds of Logic	26
2.8	Further Reading	29
2.9	Exercises	30
Chapter 3	Variations of SAT and MINSAT	34
3.1	Overview	34
3.2	Problem MAXCLS SAT	36
3.3	Problem MINCLS UNSAT	39
3.4	Problem MAXVAR SAT	42
3.5	Problem MINVAR UNSAT	44
3.6	Problem MAXSAT	47
3.7	Further Reading	51
3.8	Exercises	51
Chapter 4	Quantified SAT and MINSAT	55
4.1	Overview	55
4.2	Problem Q-ALL SAT	58
4.3	Problem Q-MIN UNSAT	61
4.4	Problem Q-MAX MINSAT	66
4.5	More Complicated Quantified Problems	70
4.6	Heuristic Algorithms	77
4.7	Further Reading	87
4.8	Exercises	87
Part II	Formulation of Logic Systems	95
Chapter 5	Basic Formulation Techniques	97
5.1	Overview	97
5.2	Variables and Clauses	98
5.3	Redundant Clauses	100
5.4	Inconsistent Clauses	102
5.5	Validation	104
5.6	Decision Pyramid	108
5.7	Explanations	111
5.8	Accelerated Theorem Proving	116
5.9	Decision Graphs	120
5.10	Difficult Cases	126
5.11	Further Reading	128
5.12	Exercises	129

Chapter 6 Uncertainty	132
6.1 Overview	132
6.2 Basic Rule	134
6.3 Satisfiability	136
6.4 Minimum Cost Satisfiability	141
6.5 Quantified SAT and MINSAT	147
6.6 Defuzzification	148
6.7 Further Reading	151
6.8 Exercises	152
 Part III Learning	155
 Chapter 7 Learning Formulas	157
7.1 Overview	157
7.2 Basic Concepts	158
7.3 Separation of Two Sets	167
7.4 Min and Max Formulas	175
7.5 Optimized Formulas	178
7.6 Additional Logic Constraints	188
7.7 Reversing the Roles of Sets	189
7.8 Voting	192
7.9 Further Reading	193
7.10 Exercises	193
 Chapter 8 Accuracy of Learned Formulas	197
8.1 Overview	197
8.2 Subsets of Training Data	199
8.3 Logic Formulas for Subsets	202
8.4 Classification Errors	204
8.5 Vote Distributions	206
8.6 Classification Control	209
8.7 Multipopulation Classification	213
8.8 Further Reading	227
8.9 Exercises	228

Part IV Advanced Reasoning	233
Chapter 9 Nonmonotonic and Incomplete Reasoning	235
9.1 Overview	235
9.2 Nonmonotonicity	238
9.3 Incompleteness	246
9.4 Uncertain Nonmonotonicity and Incompleteness	250
9.5 Further Reading	254
9.6 Exercises	254
Chapter 10 Question-and-Answer Processes	256
10.1 Overview	256
10.2 Basic Process	258
10.3 Definitions	260
10.4 Reduction of CNF System	263
10.5 Proof of Conclusions	265
10.6 Selection of Goal Set	268
10.7 Low-cost Assignments	268
10.8 Selection of Tests	272
10.9 QA Process	278
10.10 Explanations	280
10.11 Variation: Optimization	281
10.12 Evaluation of Learned Formulas	287
10.13 Further Reading	293
10.14 Exercises	294
Part V Applications	299
Chapter 11 Applications	301
11.1 Overview	301
11.2 Correctness of Design	302
11.3 Music Composition Assistant	310
11.4 Management of Hazardous Materials	314
11.5 Traffic Control	316
11.6 Credit Rating	320
11.7 Deciding Word Sense	324
11.8 Differential Medical Diagnosis	329
