

SOLAR

TECHNOLOGIES FOR BUILDINGS

Ursula Eicker

 WILEY

Contents

Preface	ix
Abbreviations in the text	xi
1 Solar energy use in buildings	1
1.1 Energy consumption of buildings	1
1.1.1 Residential buildings	2
1.1.2 Office and administrative buildings	4
1.1.3 Air conditioning	6
1.2 Meeting requirements by active and passive solar energy use	9
1.2.1 Active solar energy use for electricity, heating and cooling	9
1.2.2 Meeting heating energy requirements by passive solar energy use	12
2 Solar irradiance	13
2.1 Extraterrestrial solar irradiance	13
2.1.1 Power and spectral distribution of solar irradiance	13
2.1.2 Sun–Earth geometry	16
2.1.2.1 Equator coordinates	17
2.1.2.2 Horizon coordinates	20
2.1.2.3 Sun-position diagrams	22
2.2 The passage of rays through the atmosphere	24
2.3 Statistical production of hourly irradiance data records	26
2.3.1 Daily average values from monthly average values	27
2.3.2 Hourly average values from daily average values	31
2.4 Global irradiance and irradiance on inclined surfaces	34
2.4.1 Direct and diffuse irradiance	34
2.4.2 Conversion of global irradiance to inclined surfaces	35
2.4.2.1 An isotropic diffuse irradiance model	35
2.4.2.2 Diffuse irradiance model based on Perez	36
2.4.3 Measurement techniques for solar irradiance	39
2.5 Shading	39
3 Solar thermal energy	45
3.1 Solar-thermal water collectors	45
3.1.1 Innovations	45
3.1.2 System overview	46
3.1.3 Thermal collector types	47
3.1.3.1 Swimming pool absorbers	47
3.1.3.2 Flat plate collectors	47
3.1.3.3 Vacuum tube collectors	48
3.1.3.4 Parabolic concentrating collectors	48
3.1.4 System engineering for heating drinking-water	49
3.1.4.1 The solar circuit and hydraulics	49
3.1.4.2 Heat storage	55
3.1.4.3 Piping and circulation losses	60
3.1.5 System technology for heating support	61
3.1.6 Large solar plants for heating drinking water with short-term stores	63

3.1.6.1	Design of large solar plants	66
3.1.7	<i>Solar district heating</i>	68
3.1.8	<i>Costs and economy</i>	71
3.1.9	<i>Operational experiences and relevant standards</i>	73
3.1.10	<i>Efficiency calculation of thermal collectors</i>	74
3.1.10.1	Temperature distribution of the absorber	75
3.1.10.2	Collector efficiency factor F'	79
3.1.10.3	Heat dissipation factor F_R	79
3.1.10.4	Heat losses of thermal collectors	83
3.1.10.5	Optical characteristics of transparent covers and absorber materials	92
3.1.11	<i>Storage modelling</i>	97
3.2	Solar air collectors.....	103
3.2.1	System engineering	105
3.2.2	<i>Calculation of the available thermal power of solar air collectors</i>	107
3.2.2.1	Temperature-dependent material properties of air	107
3.2.2.2	Energy balance and collector efficiency factor.....	108
3.2.2.3	Convective heat transfer in air collectors.....	109
3.2.2.4	Thermal efficiency of air collectors	117
3.2.3	<i>Design of the air circuit</i>	120
3.2.3.1	Collector pressure losses	120
3.2.3.2	Air duct systems	121
4	Solar cooling	123
4.1	Open cycle desiccant cooling	125
4.1.1	<i>Introduction to the technology</i>	125
4.1.2	<i>Coupling with solar thermal collectors</i>	128
4.1.3	<i>Costs</i>	128
4.1.4	<i>Physical and technological bases of sorption-supported air-conditioning</i>	129
4.1.4.1	Technology of sorption wheels	129
4.1.4.2	Air-status calculations	130
4.1.4.3	Dehumidifying potential of sorption materials.....	132
4.1.4.4	Calculation of the sorption isotherms and isosteres of silica gel	135
4.1.4.5	Calculation of the dehumidifying performance of a sorption rotor.....	140
4.1.5	<i>The technology of heat recovery</i>	143
4.1.5.1	Recuperators	143
4.1.5.2	Regenerative heat exchangers	148
4.1.6	<i>Humidifier technology</i>	152
4.1.7	<i>Design limits and climatic boundary conditions</i>	153
4.1.7.1	Demands on room temperatures and humidities.....	153
4.1.7.2	Regeneration temperature and humidity	153
4.1.7.3	Calculation of supply air status with different climatic boundary conditions.	154
4.1.7.4	Limits and application possibilities of open sorption	155
4.1.8	<i>Energy balance of sorption-supported air-conditioning</i>	156
4.1.8.1	Usable cooling power of open sorption	156
4.1.8.2	Coefficients of performance and primary energy consumption	158
4.2	Closed cycle adsorption cooling	162

4.2.1	<i>Technology and areas of application</i>	162
4.2.2	<i>Costs</i>	163
4.2.3	<i>Operational principle</i>	163
4.2.4	<i>Energy balances and pressure conditions</i>	165
4.2.4.1	Evaporator	166
4.2.4.2	Condenser	168
4.2.4.3	The adsorption process	169
4.2.4.4	Heating phase	172
4.2.4.5	The desorption process	172
4.2.4.6	Cooling phase	174
4.2.5	<i>Coefficients of performance</i>	175
4.3	<i>Absorption cooling technology</i>	177
4.3.1	<i>The absorption cooling process and its components</i>	178
4.3.1.1	Double-lift absorption cooling process	181
4.3.1.2	Evaporator and condenser	182
4.3.1.3	Absorber	183
4.3.1.4	Generator	185
4.3.2	<i>Physical principles of the absorption process</i>	185
4.3.2.1	Vapour pressure curves of material pairs	185
4.3.3	<i>Refrigerant vapour concentration</i>	189
4.3.4	<i>Energy balances and performance figures of an absorption cooler</i>	190
4.3.4.1	Ideal performance figures	190
4.3.4.2	Real performance figures and enthalpy balances	191
4.3.5	<i>Absorption technology and solar plants</i>	200
5	Grid-connected photovoltaic systems	201
5.1	Structure of grid-connected systems	201
5.2	Solar cell technologies	203
5.3	Module technology	203
5.4	Building integration and costs	204
5.5	Energy production and the performance ratio of PV systems	205
5.5.1	<i>Energy amortisation times</i>	206
5.6	Physical fundamentals of solar electricity production	207
5.7	Current-voltage characteristics	209
5.7.1	<i>Characteristic values and efficiency</i>	209
5.7.2	<i>Curve fittings to the current-voltage characteristic</i>	210
5.7.2.1	Parameter adjustment from module data sheets	216
5.7.2.2	Full parameter set calculation	220
5.7.2.3	Simple explicit model for system design	221
5.7.3	<i>I-V characteristic addition and generator interconnecting</i>	223
5.8	PV performance with shading	225
5.8.1	<i>Bypass diodes and backwards characteristics of solar cells</i>	225
5.9	Simple temperature model for PV modules	228
5.10	System engineering	231
5.10.1	<i>DC connecting</i>	231
5.10.1.1	Cable sizing	231

5.10.1.2	System voltage and electrical safety	232
5.10.1.3	String diodes and short-circuit protection	232
5.10.2	<i>Inverters</i>	234
5.10.2.1	Operational principle	234
5.10.2.2	Electrical safety and mains monitoring	235
5.10.2.3	Inverter efficiencies	235
5.10.2.4	Power sizing of inverters	238
6	Thermal analysis of building-integrated solar components	243
6.1	Empirical thermal model of building-integrated photovoltaics	244
6.2	Energy balance and stationary thermal model of ventilated double facades	246
6.2.1	<i>Heat transfer coefficients for the interior and facade air gap</i>	250
6.3	Building-integrated solar components (U- and g-values)	254
6.4	Warm-air generation by photovoltaic facades	257
7	Passive solar energy	260
7.1	Passive solar use by glazings	260
7.1.1	<i>Total energy transmittance of glazings</i>	261
7.1.2	<i>Heat transfer coefficients of windows</i>	263
7.1.3	<i>New glazing systems</i>	265
7.2	Transparent thermal insulation	265
7.2.1	<i>Operational Principle</i>	266
7.2.2	<i>Materials used and construction</i>	270
7.2.2.1	<i>Construction principles of TWD systems</i>	270
7.3	Heat storage by interior building elements	271
7.3.1	<i>Component temperatures for sudden temperature increases</i>	274
7.3.2	<i>Periodically variable temperatures</i>	281
7.3.3	<i>Influence of solar irradiance</i>	286
8	Lighting technology and daylight use	288
8.1	Introduction to lighting and daylighting technology	288
8.1.1	<i>Daylighting of interior spaces</i>	289
8.1.2	<i>Luminance contrast and glare</i>	291
8.2	Solar irradiance and light flux	291
8.2.1	<i>Physiological-optical basics</i>	292
8.2.2	<i>Photometric radiation equivalent</i>	292
8.2.3	<i>Artificial light sources</i>	294
8.3	Luminance and illuminance	295
8.3.1	<i>Luminance and adaptation of the eye</i>	299
8.3.2	<i>Distribution of the luminous intensity of artificial light sources</i>	300
8.3.3	<i>Units and definitions</i>	303
8.4	Sky luminous intensity models	304
8.5	Light measurements	307
8.6	Daylight distribution in interior spaces	308
8.6.1	<i>Calculation of daylight coefficients</i>	311
