Hydrolysis in Drug and Prodrug Metabolism

Chemistry, Biochemistry,
and Enzymology

WILEY-VCH

Contents

Chapter 1 Introduction: Metabolic Hydrolysis and Prodrug Design

1.1. Hydrolysis and Hydration in Xenobiotic Metabolism	1
1.1.1. Metabolic Hydrolysis, a Neglected Field?	
1.1.2. Functionalization or Conjugation?	
1.1.3. Hydrolysis, Hydration, Dehydration	
1.2. Principles of Prodrug Design	3
1.2.1. Definition and Objectives	
1.2.2. Complementary Viewpoints in Prodrug Design	
1.2.3. Prodrugs in Research and Development	

Chapter 2 Classification, Localization, and Some Physiological Roles of Hydrolytic Enzymes

2.1. Introduction	12
2.2. Classification of Peptidases	12
2.2.1. <i>IUBMB</i> Classification	
2.2.2. Classification Based on Sequences	
2.3. Localization and Some Physiological Roles of Peptidases	17
2.3.1. Extracellular Peptidases	
2.3.2. Intracellular Peptidases	
2.3.2.1. Membrane-Bound Peptidases	
2.3.2.2. Cytosolic Peptidases	
2.3.2.3. Lysosomal Peptidases	
2.3.2.4. Signal and Processing Peptidases	
2.3.3. Viral and Bacterial Peptidases	
2.4. Classification of Esterases	25
2.4.1. <i>IUBMB</i> Classification	
2.4.2. Classification Based on Interactions with Organophosphates	
2.4.3. Classification Based on <i>pI</i> Value	
2.4.4. Classification Based on Sequence	

2.5.	Localization and Some Physiological Role of Esterases	32
2.5.1.	Carboxylesterases	
2.5.1.1.	Localization of Carboxylesterases	
2.5.1.2.	Some Physiological Functions of Carboxyl- esterases	
2.5.2.	Cholinesterases	
2.5.3.	Sterol Esterase	
2.5.4.	Lipases	
2.5.5.	Thiolester Hydrolases	
2.5.6.	Hydrolases of Esters of Inorganic Acids	
2.5.6.1.	Phosphatases	
2.5.6.2.	Sulfatases	
2.6.	Nonhydrolytic Enzymes That Act as Hydrolases	39

Chapter 3 Catalytic Mechanisms of Hydrolytic Enzymes

3.1.	Introduction	47
3.2.	An Overview of the Hydrolysis of Ester and Amide Bonds	48
3.3.	Serine Hydrolases	50
3.3.1.	Serine Peptidases	
3.3.2.	Stereoelectronic Factors That Control the Fate of the Tetrahedral Intermediate in Serine Peptidases	
3.3.3.	Kinetics of Hydrolysis by Serine Hydrolases	
3.3.4.	Other Serine Hydrolases	
3.4.	Cysteine Hydrolases	59
3.5.	Aspartic Hydrolases	60
3.6.	Metallopeptidases	62
3.7.	Other Hydrolases and Hydrolase-Like Activities	65
3.7.1.	Calcium-Dependent Hydrolases	
3.7.2.	Aldehyde Dehydrogenase	
3.7.3.	Carbonic Anhydrase	
3.7.4.	Hemoglobin	
3.7.5.	Serum Albumin	

Chapter 4 The Hydrolysis of Amides

4.1.	Introduction	81
4.2.	Aliphatic Amides	83
4.2.1.	Primary Aliphatic Amides	
4.2.2.	Secondary Aliphatic Amides	
4.2.3.	Tertiary Aliphatic Amides	

4.3. Aromatic Amides	99
4.3.1. Benzamides and Analogues	
4.3.1.1. Primary Benzamides and Analogues	
4.3.1.2. Secondary Benzamides	
4.3.1.3. Tertiary Benzamides	
4.3.2. Anilides	
4.3.2.1. Arylacetamides	
4.3.2.2. <i>N</i> ⁴ -Acylated Sulfonamides	
4.3.2.3. Aminoacylanilides	
4.3.2.4. Toxicity of Anilides	
4.3.3. Amide Bonds That Link Two Aromatic Systems	
4.4. Imides	127
4.4.1. Linear Imides	
4.4.2. Cyclic Imides	
4.5. Ureides	136
4.5.1. Linear Ureides	
4.5.2. Cyclic Ureides	
4.6. Sulfonylureas	145
4.7. Hydrazides and Aminoacyltriazenes	148

Chapter 5 The Hydrolysis of Lactams

5.1. Introduction	163
5.2. β -Lactam Antibiotics	164
5.2.1. Structural Diversity	
5.2.2. Reactivity of the β -Lactam Ring	
5.2.2.1. Antibacterial Activity	
5.2.2.2. Enzymatic Hydrolysis by β -Lactamases	
5.2.2.3. Mechanism-Based Inactivators of β -Lactamases	
5.2.2.4. Chemical Hydrolysis – Reactivity of the Nucleus	
5.2.2.5. Chemical Hydrolysis – Substituent Effects	
5.2.3. Relationship between Chemical Hydrolysis and Antibacterial Activity	
5.2.4. Stereoselectivity of Hydrolysis	
5.2.5. Intermolecular Reactions	
5.2.6. External Factors Influencing Stability	
5.2.6.1. Buffer-Catalyzed Hydrolysis	
5.2.6.2. Metal Ion Catalyzed Hydrolysis	
5.2.6.3. Micelle-Catalyzed Hydrolysis	
5.2.6.4. Interaction with Serum Albumin	

5.2.7. Metabolism in Mammals	
5.3. Simple Lactam Derivatives	213
5.4. Complex Lactam Derivatives	216
5.5. Lactam Metabolites	219
5.5.1. Formation of Lactam Metabolites	
5.5.2. Hydrolysis of Lactam Metabolites	

Chapter 6 The Hydrolysis of Peptides

6.1. Introduction	236
6.1.1. Some Definitions	
6.1.2. Chemical Background	
6.2. Prodrugs That Contain a Peptide Pro-Moiety	244
6.2.1. Prodrugs for Improved Solubility and Absorption	
6.2.2. Prodrugs for Targeted Transport	
6.2.2.1. Targeting of Intestinal Transporters	
6.2.2.2. Targeting of Cell-Specific Transporters	
6.2.3. Prodrugs for Targeted Metabolism	
6.2.3.1. Targeting of Peptidases Expressed Constitutionally	
6.2.3.2. Targeting of Peptidases Overexpressed in Pathologies	
6.2.3.3. Targeting of Peptidases Imported Artificially	
6.3. Chemical Hydrolysis of Peptides	270
6.3.1. Chemical Hydrolysis of the Peptide Bond	
6.3.2. Peptide Sites That Exhibit Particular Reactivity toward Hydrolysis	
6.3.2.1. Hydrolysis of CONH ₂ Groups at the C-Terminus	
6.3.2.2. Hydrolysis of and at Pyroglutamyl Residues	
6.3.2.3. Formation of Diketopiperazines	
6.3.2.4. Hydrolysis of Serine Peptide Bonds	
6.3.2.5. Other Reactions in Solution and in the Solid Phase	
6.3.3. Reactivity of Aspartic Acid Residues	
6.3.3.1. Reaction Mechanisms	
6.3.3.2. Structural Determinants	
6.3.4. Reactivity of Asparagine and Glutamine Residues	
6.3.4.1. Introduction	
6.3.4.2. Reaction Mechanisms	
6.3.4.3. Structural Determinants	
6.3.4.4. Deamidation in the Solid State	

6.4. Enzymatic Hydrolysis of Peptides That Contain only Common Amino Acids	312
6.4.1. Peptide Hydrolysis in Complex Biological Media	
6.4.2. Hydrolysis of Individual Peptides by Purified Enzymes	
6.4.3. Derivatized Peptides and Peptide Prodrugs	
6.5. Enzymatic Hydrolysis of Peptides That Contain Nonproteinogenic Amino Acids	329
6.5.1. Peptides That Contain Artificial or D-Amino Acids	
6.5.2. Peptides That Contain Both Artificial and D-Amino Acids	
6.5.3. Peptides That Contain β -Amino Acids	
6.6. Peptoids, Pseudopeptides, and Peptidomimetics	341
6.6.1. Peptoids	
6.6.2. Pseudopeptides	
6.6.3. Peptidomimetics	

Chapter 7 The Hydrolysis of Carboxylic Acid Esters

7.1. Introduction	365
7.2. Chemical Mechanisms of Ester Hydrolysis	367
7.3. Model Compounds and Xenobiotics	370
7.3.1. Esters of Alcohols	
7.3.2. Esters of Enols	
7.3.3. Esters of Phenols	
7.3.4. Basic Esters	
7.3.5. Diesters	
7.4. Pharmacologically Active Esters	387
7.4.1. Esters of Acetic Acid	
7.4.2. Esters That Incorporate Simple Alkyl Substituents	
7.4.3. Carbamates	
7.4.4. Esters That Incorporate Aminoalkyl Groups	
7.4.5. Soft Drugs	
7.5. Thioesters	398
7.5.1. Introduction	
7.5.2. Model Compounds and Therapeutic Agents	
7.6. Lactones	401
7.6.1. Peculiarities of Lactone Hydrolysis	
7.6.2. Lactones of Medicinal or Toxicological Interest	
7.6.3. Analogues of Lactones	

Chapter 8 The Hydrolysis of Carboxylic Acid Ester Prodrugs

8.1.	Introduction	420
8.2.	Prodrugs of Active Carboxylic Acids That Incorporate a Simple or Functionalized Alkyl Pro-Moiety	421
8.2.1.	Prodrugs That Incorporate a Simple Alkyl Pro-Moiety	
8.2.1.1.	Ethyl Esters	
8.2.1.2.	Other Alkyl Esters	
8.2.2.	Prodrugs That Incorporate an Oxyalkyl, Hydroxyalkyl, or Arylalkyl Pro-Moiety	
8.2.3.	Carboxylic Acid Esters That Incorporate a Carbamoylmethyl, Aminoalkyl, or Amidoalkyl Pro-Moiety	
8.2.3.1.	Carbamoylmethyl Esters	
8.2.3.2.	Aminoalkyl Esters	
8.2.3.3.	Amidoalkyl Esters	
8.2.4.	Quantitative Structure–Metabolism Relationships in Prodrug Design	
8.2.5.	Carboxylic Acid Esters of Acylglycerols and Bis(acylamino)propan-2-ols	
8.2.5.1.	Hybrid Triglycerides	
8.2.5.2.	Hybrid Pseudolipid Analogues	
8.3.	Prodrugs of Active Carboxylic Acids That Incorporate a Fragmentable Pro-Moiety	441
8.3.1.	Glycolic Acid Esters	
8.3.2.	Prodrugs That Incorporate an (Acyloxy)alkyl or [(Alkoxy carbonyl)oxy]methyl Pro-Moiety	
8.3.2.1.	(Acyloxy)alkyl Esters	
8.3.2.2.	[(Alkoxy carbonyl)oxy]methyl Esters	
8.3.3.	Prodrugs That Incorporate an Amidomethyl, an Aminomethyl, or Another Fragmentable Pro-Moiety That Contains an Amino Group	
8.3.4.	Prodrugs That Incorporate an (Oxodioxolyl)methyl Pro-Moiety	
8.4.	Prodrugs of Active Carboxylic Acids Esterified with a Phenol or Hydroxylamine	452
8.4.1.	Carboxylic Acid Esters of Phenols	
8.4.2.	Carboxylic Acid Esters of Hydroxylamines	
8.5.	Prodrugs of Active Alcohols and Phenols	455
8.5.1.	Prodrugs That Incorporate an Alkanoyl Pro-Moiety	
8.5.1.1.	Acetic Acid Esters	
8.5.1.2.	Unbranched Alkanoic Acid Esters	
8.5.1.3.	Branched Alkanoic Acid Esters	

8.5.1.4.	Cycloalkanoic Acid Esters	
8.5.2.	Reactions of Intramolecular Acyl Transfer	
8.5.3.	Prodrugs That Incorporate an Aromatic Acyl Pro-Moiety	
8.5.4.	Prodrugs That Incorporate an Oxygenated Alkanoyl Pro-Moiety	
8.5.5.	Prodrugs That Incorporate an Amino Acyl Pro-Moiety	
8.5.5.1.	Esters of α -Amino Acids	
8.5.5.2.	Esters of Other Amino Acids	
8.5.6.	Prodrugs That Incorporate a Fragmentable Acyl Pro-Moiety	
8.5.6.1.	<i>O</i> -[(Acyloxy)methyl] Derivatives	
8.5.6.2.	Alkoxy carbonyl Derivatives	
8.5.6.3.	Carbamic Acid Esters	
8.5.7.	Cyclization-Activated Carboxylic Acid Ester Prodrugs	
8.5.7.1.	Nucleophilic Attack by a Basic Group	
8.5.7.2.	Intramolecular Attack by an Anionic N-Atom	
8.5.7.3.	Intramolecular Attack by a Carboxylate Group	
8.5.7.4.	Intramolecular Attack by a Hydroxy Group	
8.5.8.	Prodrugs That Incorporate a 1,4-Dihydropyridine Pro-Pro-Moiety	
8.6.	Lactones as Prodrugs	493
8.7.	Prodrugs of Active Amines and Amides	495
8.7.1.	Alkyl and Aryl Carbamates	
8.7.2.	(Acyloxy)methyl Carbamates	
8.7.3.	<i>N</i> -[(Acyloxy)methyl] Derivatives	
8.7.3.1.	Cleavage of the <i>N</i> -(Hydroxymethyl) Intermediate	
8.7.3.2.	Simple <i>N</i> -[(Acyloxy)methyl] Derivatives	
8.7.3.3.	Complex <i>N</i> -[(Acyloxy)methyl] Derivatives	
8.7.4.	Cyclization-Activated Double Prodrugs of Amines and Peptides	
8.7.5.	Special Cases	
8.8.	Macromolecular Prodrugs	518

Chapter 9 The Cleavage of Esters of Inorganic Acids

9.1.	Introduction	535
9.2.	De-esterification of Organic Nitrates and Nitrites	536

9.2.1.	Introduction	
9.2.2.	<i>In vivo</i> Metabolism	
9.2.3.	Mechanisms of Cleavage	
9.2.3.1.	Chemical Hydrolysis of Organic Nitrates	
9.2.3.2.	Chemical Hydrolysis of Organic Nitrites	
9.2.3.3.	Thiol-Dependent Cleavage of Organic Nitrates and Nitrites	
9.2.3.4.	Hemoprotein-Dependent Reductive Cleavage of Organic Nitrates and Nitrites	
9.3.	Hydrolysis and Oxidative Cleavage of Organophosphates	549
9.3.1.	Introduction	
9.3.2.	Hydrolysis of Medicinal Phosphoric Acid Alkyl and Aryl Monoesters	
9.3.3.	Hydrolysis of Medicinal Phosphoric Acid Diesters and Triesters	
9.3.4.	Cleavage of Industrial Phosphoric Acid Triesters	
9.3.5.	Cleavage of Phosphonates	
9.3.6.	Cleavage of Phosphorothioates and Phosphonothioates	
9.3.7.	Hydrolysis of Phosphoramidates and P-Halide Compounds	
9.4.	Hydrolysis of Sulfuric Acid Esters and Related Compounds	577
9.4.1.	Introduction	
9.4.2.	Sulfuric Acid Esters	
9.4.3.	Related Compounds	

Chapter 10 The Hydration of Epoxides

10.1.	Introduction	591
10.2.	Chemical Reactivity of Epoxides	592
10.2.1.	Rearrangement Reactions	
10.2.2.	Addition of Nucleophiles	
10.3.	Epoxide Hydrolases	596
10.3.1.	Enzymology	
10.3.2.	Catalytic Mechanism	
10.4.	Arene Oxides	601
10.4.1.	Introduction	
10.4.2.	The Epoxide–Dihydrodiol Pathway of Benzene and Phenyl-Containing Drugs	
10.4.3.	The Epoxide–Dihydrodiol Pathway of Bicyclic and Tricyclic Aromatic Hydrocarbons	
10.4.4.	The Epoxide–Dihydrodiol Pathway of Polycyclic Aromatic Hydrocarbons	

10.5. Alkene Oxides	617
10.5.1. Introduction	
10.5.2. Epoxides of Unconjugated Alkenes	
10.5.3. Epoxides of Functionalized Alkenes	
10.5.4. Haloalkene Oxides	
10.5.5. Epoxides of Conjugated Dienes	
10.5.6. Styrene and Stilbene Oxides	
10.5.7. Simple Cycloalkene Oxides	
10.5.8. Cycloalkene Oxides of Medicinal or Toxicological Interest	

Chapter 11 Miscellaneous Reactions of Hydration and Dehydration

11.1. Introduction	664
11.2. Hydrolysis of Carbohydrate Conjugates	664
11.2.1. Ether <i>O</i> -Glucuronides	
11.2.2. Acyl Glucuronides and Other <i>O</i> -Glycosides	
11.2.3. <i>N</i> -Glycosides	
11.3. Hydrolytic Cleavage of Benzhydryl Ethers	675
11.4. Hydrolytic Dehalogenations	677
11.4.1. Mechanistic Considerations	
11.4.2. Monodehalogenation Reactions	
11.4.3. Reactions of Multiple Dehalogenation	
11.4.4. Dehydrohalogenation Reactions	
11.5. Hydrolysis of <i>Mannich</i> Bases	688
11.5.1. <i>O</i> - and <i>S</i> - <i>Mannich</i> Bases	
11.5.2. <i>N</i> - <i>Mannich</i> Bases	
11.6. Hydrolytic Cleavage of Imines and Analogues	693
11.6.1. Imines, Enaminones, and Hydrazones	
11.6.2. Imidates and Amidines	
11.6.3. Oximes and Oximines	
11.6.4. Isocyanates and Nitriles	
11.7. Bond-Order Increase by Elimination Reactions	707
11.8. Hydrolytic Ring Opening	710
11.8.1. Cyclic <i>Mannich</i> Bases	
11.8.2. Other Ring Systems	
11.9. Nucleophilic Cyclizations	718
11.9.1. Cyclizations That Eliminate an Amine, a Phenol, or a Halide Anion	
11.9.2. Formation of Lactams	
11.9.3. Lactam–Lactone Tautomeric Equilibrium	

11.9.4. Cyclodehydrations by Nucleophilic Attack at a Keto Group	
11.10. Hydration of Cisplatin and Analogues	732
11.10.1. Cisplatin	
11.10.2. Other Platinum Complexes	
Chapter 12 Conclusion: The Biochemistry of Water	749
Index	753
