

Molecular Plant Pathology

M. Dickinson

ADVANCED TEXT

Contents

Abbreviations	x
1 The fundamentals of plant pathology	1
1.1 The concept of plant disease	1
1.2 The causal agents	1
1.2.1 <i>Fungi</i>	1
1.2.2 <i>The Oomycota</i>	2
1.2.3 <i>Protozoa</i>	2
1.2.4 <i>Bacteria</i>	4
1.2.5 <i>Phytoplasmas and Spiroplasmas</i>	5
1.2.6 <i>Viruses</i>	6
1.2.7 <i>Other agents of plant disease</i>	6
1.3 The significance of plant diseases	9
1.3.1 <i>Historically important diseases</i>	9
1.3.2 <i>Emerging diseases</i>	10
1.4 The control of plant diseases	11
1.5 Molecular biology in plant pathology	12
1.5.1 <i>A historical perspective</i>	12
1.5.2 <i>The use of model organisms</i>	12
1.5.3 <i>Transformation techniques</i>	14
1.5.4 <i>Forward genetics</i>	14
1.5.5 <i>Reverse genetics</i>	21
1.5.6 <i>Dissection of signalling pathways</i>	21
1.5.7 <i>Gene expression profiling</i>	23
1.5.8 <i>Proteomics</i>	25
1.5.9 <i>Metabolite profiling</i>	26
1.5.10 <i>Bioinformatics</i>	26
2 Fungal and oomycete diseases – establishing infection	29
2.1 Dispersal of spores	29
2.2 Finding a suitable host	29
2.3 Spore attachment to the plant	30
2.4 The germination process	31
2.5 Penetration methods	33
2.6 Germ-tube elongation	34
2.7 Induction of appressorial development	35
2.7.1 <i>Physical factors</i>	35
2.7.2 <i>Chemical factors</i>	37
2.8 Appressorial development	38
2.8.1 <i>Morphology</i>	38
2.8.2 <i>Hydrophobins</i>	40
2.8.3 <i>Melanisation</i>	40
2.8.4 <i>Turgor pressure</i>	42
2.9 Cell-wall degrading enzymes (CWDEs)	42

3	Fungal and oomycete diseases – development of disease	47
3.1	The basic concepts – necrotrophy versus biotrophy	47
3.2	Host barriers	48
3.3	Overcoming host barriers	48
3.3.1	<i>Quiescence</i>	48
3.3.2	<i>Detoxification of phytoanticipins</i>	48
3.3.3	<i>Detoxification of phytoalexins</i>	49
3.3.4	<i>ATP-binding cassette (ABC) transporters</i>	50
3.3.5	<i>Suppression of active oxygen species</i>	51
3.3.6	<i>Avoidance of recognition</i>	51
3.4	Establishing infection	52
3.5	Cell-wall-degrading enzymes	52
3.6	The role of toxins	53
3.6.1	<i>Host-selective toxins</i>	53
3.6.2	<i>Host non-selective toxins</i>	57
3.6.3	<i>Mycotoxins</i>	57
3.7	Biotrophy	60
3.7.1	<i>Haustorial structure</i>	61
3.7.2	<i>Haustorial function</i>	62
3.8	Prevention of leaf senescence	63
3.8.1	<i>The role of cytokinins</i>	63
3.8.2	<i>The role of polyamines</i>	63
4	Fungal and oomycete genetics	67
4.1	The concept of race structure	67
4.2	Avirulence genes	67
4.2.1	<i>General concepts</i>	67
4.2.2	<i>Cloning of avirulence genes</i>	68
4.2.3	<i>Avr protein structure and function</i>	69
4.2.4	<i>The significance of avirulence genes in species specificity</i>	70
4.3	Fungicide resistance	70
4.4	Mechanisms for generating genetic variation in fungi	72
4.5	Mating-type genes	73
4.6	Chromosome instability	76
4.7	Alien genes/horizontal gene transfer	77
4.8	Role of transposable elements	79
4.9	Role of heterokaryosis	79
4.10	Role of mitochondrial DNA	80
4.11	Role of mycoviruses	80
5	Bacterial diseases – establishing infection	83
5.1	Bacterial–bacterial communication – quorum sensing	83
5.2	Plant penetration	85
5.2.1	<i>Foliar bacteria</i>	85
5.2.2	<i>Soil-borne bacteria</i>	85
5.3	Attachment	86
5.4	Stimulation of gene expression in response to host factors	88
5.5	The role of cell-wall-degrading enzymes (CWDEs)	90
5.6	The role of toxins	92
5.7	The role of hormones	95
5.8	The role of extracellular polysaccharides (EPSs)	99

6	Bacterial diseases – determinants of host specificity	103
6.1	The cloning of avirulence genes	103
6.2	The products of avirulence genes	103
6.3	Type III secretion mechanisms	105
6.4	Type III secretion in plant pathogens	105
6.5	Hrp-pili	107
6.6	Regulation of <i>hrp</i> genes	108
6.7	Secreted proteins	110
6.8	Secretion signals	111
6.9	Pathogenicity islands	111
6.10	The role of plasmids	112
7	Plant viruses – structure and replication	113
7.1	The structure of plant viruses	113
7.2	Virus infection of plants	114
7.3	Translation and replication of positive-strand RNA viruses	115
7.3.1	<i>The production of sub-genomic RNAs and virus replication</i>	116
7.3.2	<i>Segmented genomes</i>	118
7.3.3	<i>Polyprotein processing</i>	118
7.3.4	<i>Readthrough and frameshifting</i>	119
7.4	Negative-strand RNA viruses	120
7.5	Double-strand RNA viruses	121
7.6	Single-strand DNA viruses	122
7.7	Double-strand DNA viruses	123
7.8	Viroids	125
7.9	Other sub-viral entities	126
7.10	Viral assembly	127
7.10.1	<i>Assembly of rod-shaped viruses</i>	127
7.10.2	<i>Assembly of isometric particles</i>	128
7.10.3	<i>Assembly of membrane-bound particles</i>	129
8	Plant viruses – movement and interactions with plants	131
8.1	Transmission of viruses	131
8.2	Transmission by insect vectors	131
8.3	Transmission by nematodes	134
8.4	Transmission by zoosporic 'fungi'	134
8.5	Seed and pollen transmission	134
8.6	Short-distance movement of viruses in plants	135
8.7	Long-distance movement in plants	137
8.8	Viral effects on plants	138
8.8.1	<i>Alterations in host gene expression</i>	138
8.8.2	<i>Alterations in host cell metabolism</i>	139
8.8.3	<i>Suppression of defence responses</i>	139
8.9	Gene-for-gene interactions with plant viruses	142
8.10	Genomic variation in plant viruses	142
9	Resistance mechanisms in plants	145
9.1	Classical concepts of resistance	145
9.2	Preformed defences	146
9.2.1	<i>Structural barriers</i>	146
9.2.2	<i>Root border cells</i>	147
9.2.3	<i>Phytoanticipins</i>	147

9.3	Induced defences	148
9.3.1	Local signals	148
9.3.2	Programmed cell death (PCD)	148
9.3.3	Induced structural barriers	148
9.3.4	Phytoalexins	149
9.3.5	Pathogenesis-related proteins	152
9.3.6	Other defence-related proteins	154
9.3.7	Post-transcriptional gene silencing (PTGS)	154
9.4	Systemic resistance mechanisms	155
9.5	'Communal' resistance	156
10	Resistance genes	159
10.1	Gene-for-gene resistance	159
10.2	Features of cloned resistance genes	161
10.3	R gene specificity	164
10.3.1	Leucine-rich repeats (LRRs)	164
10.3.2	Cellular location of recognition	165
10.3.3	Does the R gene interact directly with the pathogen elicitor?	166
10.4	The TIR domain	167
10.5	The NBS (NB) domain	167
10.6	Other R gene domains	167
10.6.1	Protein kinases	167
10.6.2	Coiled coil (leucine zipper) domains	168
10.7	Genetic organisation of resistance genes	168
10.8	Mechanisms for generating new R gene specificities	169
10.9	Coevolution of resistance genes	171
10.10	Recessive resistance genes	171
10.11	Quantitative resistance	172
11	Signalling in plant disease resistance mechanisms	175
11.1	Genetic analyses	176
11.2	MAP kinases (MAPK)	177
11.3	Ion fluxes and calcium homeostasis	179
11.4	The oxidative burst	181
11.5	Nitric oxide (NO)	184
11.6	(p)ppGpp signalling	186
11.7	Low-molecular-weight signalling molecules	186
11.8	RNA as a signal	189
11.9	Co-ordination of cell death responses	189
11.10	Interplay of downstream signalling pathways	191
11.10.1	The EDS1 and NDR1 pathways	191
11.10.2	The role of NPR1	193
11.10.3	Pathways that are independent of NPR1	193
12	Molecular diagnostics	197
12.1	Classical approaches	197
12.2	The use of antibodies	198
12.2.1	Polyclonal antibodies (Pabs)	198
12.2.2	Monoclonal antibodies (Mabs)	199
12.2.3	Recombinant DNA techniques	200
12.3	Serological tests	201
12.3.1	ELISA (enzyme-linked immunosorbent assay)	201
12.3.2	Lateral flow techniques	201

12.3.3	<i>Other uses of antibodies</i>	202
12.4	Nucleic acid-based techniques	203
12.4.1	<i>Identification of pathogen-specific markers</i>	203
12.4.2	<i>Hybridisation techniques</i>	204
12.4.3	<i>PCR-based techniques</i>	204
12.4.4	<i>Gene-array-based techniques</i>	206
12.4.5	<i>Quantitative PCR</i>	206
12.5	Phylogenetic analysis	207
13	Application of molecular biology to conventional disease control strategies	209
13.1	Breeding for resistance	209
13.1.1	<i>The basis of resistance breeding programmes</i>	209
13.1.2	<i>The conventional breeding strategy</i>	210
13.2	The use of tissue culture in plant breeding	211
13.3	Marker-assisted breeding	211
13.4	The identification of novel resistance gene specificities	213
13.5	The use of chemicals for disease control	214
13.6	The use of molecular biology in agrochemical production	215
13.7	Engineering chemicals that elicit defence responses in plants	216
14	Transgenic approaches for crop protection	219
14.1	Pathogen-derived resistance	219
14.1.1	<i>Coat-protein-mediated resistance</i>	219
14.1.2	<i>Replicase-mediated resistance</i>	220
14.1.3	<i>Movement protein-mediated resistance</i>	220
14.1.4	<i>RNA-mediated resistance</i>	221
14.1.5	<i>Pathogen-derived resistance against bacterial and fungal diseases</i>	221
14.2	Plantibodies	222
14.3	Over-expressing defence genes	222
14.4	Expressing defence genes under the control of inducible promoters	224
14.5	The use of cloned resistance genes	225
14.6	Engineering broad-spectrum resistance	226
14.7	Resistance based on antagonistic microbes	228
14.8	Expression of vaccines in plants	230
14.9	Concluding remarks	231
	Index	233
