

*Analytical Methods
and
Special Functions*

*An International Series of
Monographs in Mathematics*

**Methods of the
Theory of
Generalized
Functions**

V. S. Vladimirov

CONTENTS

Preface	xi
Symbols and Definitions	1
Chapter 1. Generalized Functions and their Properties	5
1. Test and Generalized Functions	5
1.1. Introduction	5
1.2. The space of test functions $\mathcal{D}(\mathcal{O})$	6
1.3. The space of generalized functions $\mathcal{D}'(\mathcal{O})$	10
1.4. The completeness of the space of generalized functions $\mathcal{D}'(\mathcal{O})$	12
1.5. The support of a generalized function.....	13
1.6. Regular generalized functions	15
1.7. Measures.....	16
1.8. Sochozki formulae	19
1.9. Change of variables in generalized functions	21
1.10. Multiplication of generalized functions	23
2. Differentiation of Generalized Functions.....	25
2.1. Derivatives of generalized functions.....	25
2.2. The antiderivative (primitive) of a generalized function.....	27
2.3. Examples	29
2.4. The local structure of generalized functions	35
2.5. Generalized functions with compact support.....	36
2.6. Generalized functions with point support	37
2.7. Generalized functions $\mathcal{P}(\pi_\nu x ^{\alpha-1})$	39
3. Direct Product of Generalized Functions.....	41
3.1. The definition of a direct product.....	41
3.2. The properties of a direct product	43
3.3. Some applications	46
3.4. Generalized functions that are smooth with respect to some of the variables.....	48

4.	The Convolution of Generalized Functions	50
4.1.	The definition of convolution	50
4.2.	The properties of a convolution	53
4.3.	The existence of a convolution	57
4.4.	Cones in $\mathbb{R}^n$	59
4.5.	Convolution algebras $\mathcal{D}'(\Gamma+)$ and $\mathcal{D}'(\Gamma)$	63
4.6.	Mean functions of generalized functions	64
4.7.	Multiplication of generalized functions	66
4.8.	Convolution as a continuous linear translation-invariant operator	66
4.9.	Some applications	68
5.	Tempered Generalized Functions	74
5.1.	The space $\mathcal{S}$ of test (rapidly decreasing) functions	74
5.2.	The space $\mathcal{S}'$ of tempered generalized functions	77
5.3.	Examples of tempered generalized functions and elementary operations in $\mathcal{S}'$	78
5.4.	The structure of tempered generalized functions	80
5.5.	The direct product of tempered generalized functions	81
5.6.	The convolution of tempered generalized functions	82
5.7.	Homogeneous generalized functions	85
Chapter 2.	Integral Transformations of Generalized Functions	89
6.	The Fourier Transform of Tempered Generalized Functions	89
6.1.	The Fourier transform of test functions in $\mathcal{S}$	89
6.2.	The Fourier transform of tempered generalized functions	90
6.3.	Properties of the Fourier transform	92
6.4.	The Fourier transform of generalized functions with compact support	93
6.5.	The Fourier transform of a convolution	94
6.6.	Examples	96
6.7.	The Mellin transform	109
7.	Fourier Series of Periodic Generalized Functions	113
7.1.	The definition and elementary properties of periodic generalized functions	113
7.2.	Fourier series of periodic generalized functions	116
7.3.	The convolution algebra $\mathcal{D}'_T$	117
7.4.	Examples	119
8.	Positive Definite Generalized Functions	121
8.1.	The definition and elementary properties of positive definite generalized functions	121
8.2.	The Bochner-Schwartz theorem	123
8.3.	Examples	125

9.	The Laplace Transform of Tempered Generalized Functions.....	126
9.1.	Definition of the Laplace transform	126
9.2.	Properties of the Laplace transform	128
9.3.	Examples	130
10.	The Cauchy Kernel and the Transforms of Cauchy–Bochner and Hilbert.....	133
10.1.	The space $\mathcal{H}_s$	133
10.2.	The Cauchy kernel $\mathcal{K}_C(z)$	138
10.3.	The Cauchy–Bochner transform.....	144
10.4.	The Hilbert transform	146
10.5.	Holomorphic functions of the class $\mathcal{H}_a^{(s)}(C)$	147
10.6.	The generalized Cauchy–Bochner representation	151
11.	Poisson Kernel and Poisson Transform	152
11.1.	The definition and properties of the Poisson kernel	152
11.2.	The Poisson transform and Poisson representation	155
11.3.	Boundary values of the Poisson integral.....	157
12.	Algebras of Holomorphic Functions	159
12.1.	The definition of the $H_+(C)$ and $H(C)$ algebras.....	160
12.2.	Isomorphism of the algebras $\mathcal{S}'(C^*+) \sim H_+(C)$ and $\mathcal{S}'(C^*) \sim H(C)$	160
12.3.	The Paley–Wiener–Schwartz theorem and its generalizations	165
12.4.	The space $H_a(C)$ is the projective limit of the spaces $H_{a'}(C')$	166
12.5.	The Schwartz representation.....	168
12.6.	A generalization of the Phragmén–Lindelöf theorem	171
13.	Equations in Convolution Algebras	171
13.1.	Divisors of unity in the $H_+(C)$ and $H(C)$ algebras	171
13.2.	On division by a polynomial in the $H(C)$ algebra.....	172
13.3.	Estimates for holomorphic functions with nonnegative imaginary part in T^C	174
13.4.	Divisors of unity in the algebra $\mathcal{W}(C)$	177
13.5.	Example.....	177
14.	Tauberian Theorems for Generalized Functions.....	179
14.1.	Preliminary results	179
14.2.	General Tauberian theorem	183
14.3.	One-dimensional Tauberian theorems.....	186
14.4.	Tauberian and Abelian theorems for nonnegative measures.....	187
14.5.	Tauberian theorems for holomorphic functions of bounded argument.....	188

Chapter 3. Some Applications in Mathematical Physics	191
15. Differential Operators with Constant Coefficients	191
15.1. Fundamental solutions in $\mathcal{D}'$	191
15.2. Tempered fundamental solutions	194
15.3. A descent method	196
15.4. Examples	199
15.5. A comparison of differential operators	207
15.6. Elliptic and hypoelliptic operators	210
15.7. Hyperbolic operators	212
15.8. The sweeping principle	212
16. The Cauchy Problem	213
16.1. The generalized Cauchy problem for a hyperbolic equation	213
16.2. Wave potential	216
16.3. Surface wave potentials	220
16.4. The Cauchy problem for the wave equation	222
16.5. A statement of the generalized Cauchy problem for the heat equation	224
16.6. Heat potential	224
16.7. Solution of the Cauchy problem for the heat equation	228
17. Holomorphic Functions with Nonnegative Imaginary Part in T^C	229
17.1. Preliminary remarks	229
17.2. Properties of functions of the class $\mathcal{P}_+(T^C)$	231
17.3. Estimates of the growth of functions of the class $H_+(T^C)$	238
17.4. Smoothness of the spectral function	240
17.5. Indicator of growth of functions of the class $\mathcal{P}_+(T^C)$	242
17.6. An integral representation of functions of the class $H_+(T^C)$	245
18. Holomorphic Functions with Nonnegative Imaginary Part in T^n	249
18.1. Lemmas	249
18.2. Functions of the classes $H_+(T^1)$ and $\mathcal{P}_+(T^1)$	254
18.3. Functions of the class $\mathcal{P}_+(T^n)$	258
18.4. Functions of the class $H_+(T^n)$	263
19. Positive Real Matrix Functions in T^C	266
19.1. Positive real functions in T^C	267
19.2. Positive real matrix functions in T^C	269
20. Linear Passive Systems	271
20.1. Introduction	271
20.2. Corollaries to the condition of passivity	273
20.3. The necessary and sufficient conditions for passivity	277
20.4. Multidimensional dispersion relations	282

20.5.	The fundamental solution and the Cauchy problem	285
20.6.	What differential and difference operators are passive operators?	287
20.7.	Examples	290
20.8.	Quasiasymptotics of the solutions of systems of equations in convolutions	294
21.	Abstract Scattering Operator	295
21.1.	The definition and properties of an abstract scattering matrix	295
21.2.	A description of abstract scattering matrices	298
21.3.	The relationship between passive operators and scattering operators	299
