## Part I Introduction to Internetworking 3

### Chapter 1 Internetworking Basics 5

What Is an Internetwork? 5

History of Internetworking 6

Internetworking Challenges 7

Open System Interconnection Reference Model 7

Characteristics of the OSI Layers 9

Protocols 10

OSI Model and Communication Between Systems 10

Interaction Between OSI Model Layers 11

OSI Layer Services 11

OSI Model Layers and Information Exchange 12

OSI Model Physical Layer 14

OSI Model Data Link Layer 14

OSI Model Network Layer 15

OSI Model Transport Layer 16

OSI Model Session Layer 16

OSI Model Presentation Layer 16

OSI Model Application Layer 17

Information Formats 17

ISO Hierarchy of Networks 19

Connection-Oriented and Connectionless Network Services 20

Internetwork Addressing 21

Data Link Layer Addresses 21

MAC Addresses 22

Mapping Addresses 23

Network Layer Addresses 24

Hierarchical Versus Flat Address Space 26

Address Assignments 27

Addresses Versus Names 28

Flow Control Basics 28

Error-Checking Basics 29

Multiplexing Basics	29
Standards Organizations	30
Summary	31
Review Questions	32
For More Information	32

**Chapter 2** Introduction to LAN Protocols 35

What Is a LAN?	36
LAN Protocols and the OSI Reference Model	36
LAN Media-Access Methods	36
LAN Transmission Methods	38
LAN Topologies	38
LAN Devices	40
Review Questions	41
For More Information	41

**Chapter 3** Introduction to WAN Technologies 43

What Is a WAN?	43
Point-to-Point Links	44
Circuit Switching	45
Packet Switching	46
WAN Virtual Circuits	46
WAN Dialup Services	47
WAN Devices	47
WAN Switch	47
Access Server	48
Modem	49
CSU/DSU	49
ISDN Terminal Adapter	49
Review Questions	50
For More Information	50

<b>Chapter 4</b>	<b>Introduction to Cisco IOS Software</b>	<b>53</b>
	System Architecture	53
	Cisco IOS CLI	55
	Debugging and Logging	59
	Reloading and Upgrading	61
	Summary	62
	Review Questions	62
	For More Information	63
<b>Chapter 5</b>	<b>Bridging and Switching Basics</b>	<b>65</b>
	What Are Bridges and Switches?	65
	Link Layer Device Overview	65
	Types of Bridges	67
	Types of Switches	68
	ATM Switch	69
	LAN Switch	70
	Review Questions	70
	For More Information	70
<b>Chapter 6</b>	<b>Routing Basics</b>	<b>73</b>
	What Is Routing?	73
	Routing Components	73
	Path Determination	74
	Switching	75
	Routing Algorithms	76
	Design Goals	77
	Algorithm Types	78
	Static Versus Dynamic	78
	Single-Path Versus Multipath	79
	Flat Versus Hierarchical	79
	Host-Intelligent Versus Router-Intelligent	80
	Intradomain Versus Interdomain	80
	Link-State Versus Distance Vector	80
	Routing Metrics	80

Network Protocols 82

Review Questions 82

## **Chapter 7 Network Management Basics 85**

Introduction 85

What Is Network Management? 85

A Historical Perspective 85

Network Management Architecture 86

ISO Network Management Model 87

Performance Management 87

Configuration Management 87

Accounting Management 88

Fault Management 88

Security Management 88

Review Questions 89

## **Part II LAN Protocols 91**

### **Chapter 8 Ethernet Technologies 93**

Background 93

Ethernet—A Brief History 93

Ethernet Network Elements 94

Ethernet Network Topologies and Structures 94

The IEEE 802.3 Logical Relationship to the ISO Reference Model 96

The Ethernet MAC Sublayer 98

The Basic Ethernet Frame Format 98

Frame Transmission 100

Half-Duplex Transmission—The CSMA/CD Access Method 100

Full-Duplex Transmission—An Optional Approach to Higher Network

Efficiency 103

Flow Control 104

Frame Reception 104

The VLAN Tagging Option 105

The Ethernet Physical Layers 106

Encoding for Signal Transmission 106

The 802.3 Physical Layer Relationship to the ISO Reference Model 108

10-Mbps Ethernet—10Base-T 110

100 Mbps—Fast Ethernet	111
100Base-X	112
100Base-T4	114
100Base-T2	115
1000 Mbps—Gigabit Ethernet	117
1000Base-T	118
1000Base-X	120
Network Cabling—Link Crossover Requirements	122
System Considerations	123
Choosing UTP-Based Components and Media Category	123
Auto-negotiation—An Optional Method for Automatically Configuring Link Operational Modes	124
Network Switches Provide a Second, and Often Better, Alternative to Higher Link Speeds in CSMA/CD Network Upgrades	125
Multispeed NICs	126
Choosing 1000Base-X Components and Media	128
Multiple-Rate Ethernet Networks	129
Link Aggregation—Establishing Higher-Speed Network Trunks	131
Network Management	132
Migrating to Higher-Speed Networks	132
Summary	133
Review Questions	134
<b>Chapter 9</b> Fiber Distributed Data Interface	137
Introduction	137
Standards	138
FDDI Transmission Media	138
FDDI Specifications	139
FDDI Station-Attachment Types	140
FDDI Fault Tolerance	142
Dual Ring	142
Optical Bypass Switch	143
Dual Homing	144
FDDI Frame Format	145
FDDI Frame Fields	146
Copper Distributed Data Interface	147
Summary	148
Review Questions	148

## **Part III WAN Technologies 151**

### **Chapter 10 Frame Relay 153**

- Introduction 153
  - Frame Relay Standardization 154
- Frame Relay Devices 154
- Frame Relay Virtual Circuits 155
  - Switched Virtual Circuits 156
  - Permanent Virtual Circuits 156
  - Data-Link Connection Identifier 157
- Congestion-Control Mechanisms 157
  - Frame Relay Discard Eligibility 158
  - Frame Relay Error Checking 158
- Frame Relay Local Management Interface 158
- Frame Relay Network Implementation 159
  - Public Carrier-Provided Networks 160
  - Private Enterprise Networks 161
- Frame Relay Frame Formats 161
  - Standard Frame Relay Frame 161
  - LMI Frame Format 163
- Summary 164
- Review Questions 165

### **Chapter 11 High-Speed Serial Interface 167**

- Introduction 167
- HSSI Interface Basics 167
- HSSI Operation 168
  - Loopback Tests 168
- Summary 169
- Review Questions 169

### **Chapter 12 Integrated Services Digital Network 171**

- Introduction 171
- ISDN Devices 171
- Services 173

ISDN BRI Service 173

ISDN PRI Service 173

ISDN Specifications 173

Layer 1 173

Layer 2 175

Layer 3 175

Summary 178

Review Questions 178

### **Chapter 13** Point-to-Point Protocol 181

Introduction 181

PPP Components 181

General Operation 181

Physical Layer Requirements 182

PPP Link Layer 182

PPP Link-Control Protocol 183

Summary 184

Review Questions 184

### **Chapter 14** Switched Multimegabit Data Service 187

Introduction 187

SMDS Network Components 187

SMDS Interface Protocol 188

SIP Levels 188

Distributed Queue Dual Bus 190

SMDS Access Classes 191

SMDS Addressing Overview 191

SMDS Reference: SIP Level 3 PDU Format 192

SMDS Reference: SIP Level 2 Cell Format 194

Summary 195

Review Questions 196

<b>Chapter 15</b>	<b>Dialup Technology</b>	<b>199</b>
	Introduction	199
	A Short Dialup Technology Background	199
	Dialup Connectivity Technology	201
	Plain Old Telephone Service	201
	Basic Rate Interface	201
	T1/E1	202
	Primary Rate Interface	203
	Channel Associated Signaling	203
	Modems	203
	PPP	205
	LCP	206
	Authentication	206
	NCP	207
	A Couple of Advanced Considerations	207
	AAA	208
	Dialup Methods	208
	What's a Dialer?	209
	Interesting Traffic	209
	Benefits and Drawbacks	210
	Summary	210
	Review Questions	212
	For More Information	212
<b>Chapter 16</b>	<b>Synchronous Data Link Control and Derivatives</b>	<b>215</b>
	Introduction	215
	SDLC Types and Topologies	215
	SDLC Frame Format	216
	Derivative Protocols	218
	High-Level Data Link Control	218
	Link-Access Procedure, Balanced	219
	IEEE 802.2	219
	Qualified Logical Link Control	220
	Summary	220
	Review Questions	221

## **Chapter 17 X.25 223**

Introduction 223

X.25 Devices and Protocol Operation 223

Packet Assembler/Disassembler 224

X.25 Session Establishment 225

X.25 Virtual Circuits 225

The X.25 Protocol Suite 226

Packet-Layer Protocol 227

Link Access Procedure, Balanced 228

The X.21bis Protocol 228

LAPB Frame Format 229

X.121 Address Format 230

Summary 231

Review Questions 231

## **Chapter 18 Virtual Private Networks (VPNs) 233**

VPN Definition 233

VPN Applications 234

IPSec 234

Authentication Header (AH) 236

Encapsulating Security Payload (ESP) 236

IPSec Transport Mode and Tunnel Mode 237

Security Association (SA) 238

Internet Key Exchange (IKE) Protocol 238

Layer 2 Tunneling Protocol (L2TP) 240

Implementation Topologies 241

Compulsory Tunneling 241

Voluntary Tunneling 242

L2TP Protected by IPSec 243

MPLS VPNs 243

BGP/MPLS VPN 243

MPLS-Based Layer 2 VPN 245

Summary 246

Review Questions 246

For More Information 247

## **Part IV Multiservice Access Technologies 249**

### **Chapter 19 Voice/Data Integration Technologies 251**

- Introduction 251
  - Standards 251
  - Technology 251
  - Network Performance 252
  - Economic Advantages 252
- Advances in Applications 253
- New World Voice Technologies 254
- Voice Networking 255
  - Basic Telephony 256
- Voice over ATM 258
  - VoATM Signaling 259
  - VoATM Addressing 260
  - VoATM Routing 261
  - VoATM and Delay 262
- Voice over Frame Relay 262
  - VoFR Signaling 262
  - VoFR Addressing 262
- Voice over IP 263
  - Voice Codec Overview 264
  - VoIP Network Design Constraints 266
    - Network Bandwidth Requirements 266
    - Delay 267
- Quality of Service for VoIP 271
  - H.323 Overview 272
  - H.323 Call Flow and Protocol Interworking 274
- General MGCP Overview 275
  - MGCP Concepts 276
  - MGCP Advantages 277
  - MGCP Protocol Definitions 277
- General SIP Tutorial 279
  - SIP Messages 281
  - SIP Addressing 281
  - SIP Call Flow 281
- Skinny Client Control Protocol (SCCP) 282

Comparison and Contrast of the Various VoIP Signaling Alternatives	283
Evolution of Solutions for Voice over Data	283
The Future: Telephony Applications	285
Incentives Toward Packet Telephony Applications	285
Summary	286
Review Questions	287
For More Information	287
Books	287

## **Chapter 20** Wireless Technologies 289

Wireless Concepts	289
Radio Fundamentals	289
The Components of a Wireless Communication System	290
The Electromagnetic Spectrum	292
RF Transmission Theory	294
Electromagnetic Energy	294
Power Measurement	294
Transmission Lines	295
Antennas	296
Free Space RF Propagation	301
NLOS Wireless: Overcoming Multipath Signals in NLOS High Speed	304
Multipath Signals	304
Microwave Communication Links	306
Multipath Signals in NLOS Environments	307
Modulation and Encoding Methods for QAM	308
Advanced Signaling Techniques Used to Mitigate Multipath Signals	311
QAM with DFE	311
Spread Spectrum	312
FHSS	313
FDM	313
OFDM	313
VOFDM	314
Elements of a Total Network Solution	315
Premises Networks	315
Access Networks	316
Core Networks	316
Network Management	316
Deployment	317

Wireless Local-Area Networks (WLANs)	317
WLAN Overview	318
WLAN Architecture	319
Distribution Services	321

Summary 323

Review Questions 325

For More Information 325

    Regulations and Government 327

    WLL 327

    LMDS/MMDS (Wireless Cable) 328

    Cordless 328

    Satellite 328

    Modulations 329

    Interfaces 329

Glossary Terms 330

## **Chapter 21** Digital Subscriber Line 337

Introduction 337

Asymmetric Digital Subscriber Line 337

    ADSL Capabilities 338

    ADSL Technology 340

Signaling and Modulation 342

    CAP and DMT Modulated ADSL 342

        CAP and DMT Compared 343

        Adaptive Equalization 343

        Power Consumption 343

        Latency 344

        Speed 344

    ADSL Standards and Associations 344

Additional DSL Technologies 344

    SDSL 345

    HDSL 345

    HDSL-2 346

    G.SHDSL 346

    ISDN Digital Subscriber Line 346

    VDSL 347

Summary 347

Review Questions 348

For More Information 348

## **Chapter 22 Cable Access Technologies 351**

- Introduction 351
- Evolution from One-Way Broadcast to Two-Way Hybrid Fiber Coax 352
- Limitations and Specifications of the HFC Plant 355
- DOCSIS Standards, Signaling Protocols, and Applications 357
- DOCSIS Hardware Deployment and Resulting Service Capabilities 364
- Future DOCSIS Applications 368
- Summary 370
- Review Questions 370
- For More Information 371
  - Books 371
  - URLs 371
  - Magazines 371

## **Chapter 23 Introduction to Optical Technologies 373**

- What Is Optical Networking? 373
  - Wave Division Multiplexing and Dense Wave Division Multiplexing 373
  - Fiber to the Home 374
  - All-Optical Networks 374
    - Metro Optical Networks 374
    - Core Optical Networks 374
  - Passive Optical Networks 375
  - Residential and Business PONs 375
  - Optical Network Units and Optical Network Terminals 375
  - Ethernet Passive Optical Networks 375
  - Metro Access Networks 376
  - Transparent Optical Networks 376
  - Transport Networks 376
  - Long-Haul Networks 376
  - Extended Long-Haul Networks 378
  - Ultra-Long-Haul Networks 378
  - Gigabit and 10 Gigabit Ethernet Optical Networks 379
- Generalized Multiprotocol Label Switching 379
  - Label Switch Routers 379
  - Link Management Protocol 380
    - LMP Control Channel and Control Channel Management 381
    - Link Property 381
  - User-to-Network Interface 382

G.ASON	382
Control Plane	382
Unified Control Plane	383
Overlay Model	384
Peer Model	384
Overlay Network Configuration	384
Peer Model	385
Full Peering Model	385
Filtered-Pair Model and Augmented Model	385
Optical Control Plane User Network Interface	385
Optical Control Plane Optical Network-to-Network Interface	387
Next-Generation Protection and Restoration	387
Summary	388
Review Questions	389
For More Information	389

## **Chapter 24 VoIP 393**

H.323 Network Devices	395
H.323 Terminals	396
H.323 Gatekeepers	397
H.323 Directory Gatekeepers	397
H.323 Gateways	398
Multipoint Control Unit (MCU)	398
H.323 Protocol Suite	398
H.323	399
H.225	400
Setup	401
Call Proceeding	402
Alerting	403
Connect	404
Release and Release Complete	405
H.245	406
Capability Exchange	406
Master/Slave Determination	407
Control Channel Management	408
Round-Trip Delay Determination	408
Maintenance Loop Signaling	409
Mode Request	409
RTP and RTCP	409

H.450	410
Audio CODECs	411
H.225 RAS	414
Gatekeeper Discovery	416
Gateway Registration	416
Gateway Unregistration	417
Call Admission	417
Location Request	419
Call Disengage	421
Bandwidth Modification	421
Information Request	421
Resource Availability	421
Session Initiation Protocol (SIP)	421
SIP Messages	422
Session Description Protocol	425
SIP Network Devices	426
SIP Call Flows	429
Connecting VoIP Networks with the SS7 Network	431
Summary	432
Review Questions	433
For More Information	434
H.323	434
SIP	434
SS7 Interconnect for Voice Gateways	434
Glossary Terms	434
<b>Chapter 25</b> Dynamic Packet Transport/Spatial Reuse Protocol	<b>439</b>
DPT Architecture	439
SRP Bandwidth Optimization	440
SRP Packet Priority	442
SRP Fairness Algorithm	442
DPT Resiliency	443
Topology Discovery	444
DPT/SRP Packet Formats	445
SRP Version 2 Generic Header	445
SRP Data Packet	446

SRP Control Packet 447

Multicast Support 448

Summary 448

Review Questions 449

For More Information 449

Glossary Terms 449

## **Chapter 26** Extensible Authentication Protocol (EAP) 451

The EAP Protocol 451

Using RADIUS for EAP Authentication 453

A Typical Authentication Conversation 454

PKI Support with EAP 455

EAP Transport Layer Security (EAP-TLS) 456

Protected EAP (PEAP) 456

EAP Implementations 456

Summary 457

Review Questions 458

For More Information 458

## **Part V Bridging and Switching 461**

### **Chapter 27** Transparent Bridging 463

Transparent Bridging Operation 463

Bridging Loops 464

Spanning-Tree Algorithm 465

Frame Format 467

Review Questions 469

For More Information 469

### **Chapter 28** Mixed-Media Bridging 471

Background 471

Translation Challenges 471

Translational Bridging 473

Source-Route Transparent Bridging 476

Review Questions 476

For More Information 477

## **Chapter 29** Source-Route Bridging 479

Background 479

SRB Algorithm 479

Frame Format 481

Routing Control Field 481

Routing Designator Fields 482

Review Questions 483

For More Information 483

## **Chapter 30** LAN Switching and VLANs 485

History 486

LAN Switch Operation 486

VLANs Defined 486

Switch Port Modes 487

LAN Switching Forwarding 488

LAN Switching Bandwidth 489

LAN Switch and the OSI Model 489

Review Questions 490

For More Information 490

## **Chapter 31** Asynchronous Transfer Mode Switching 493

Standards 494

ATM Devices and the Network Environment 494

ATM Cell Basic Format 494

ATM Devices 495

ATM Network Interfaces 496

ATM Cell Header Format 496

ATM Cell Header Fields 497

ATM Services 498

ATM Virtual Connections 498

ATM Switching Operations 499

ATM Reference Model	499
The ATM Physical Layer	501
ATM Adaptation Layers: AAL1	501
ATM Adaptation Layers: AAL2	502
ATM Adaptation Layers: AAL3/4	503
ATM Adaptation Layers: AAL5	503
ATM Addressing	503
Subnetwork Model of Addressing	504
NSAP Format ATM Addresses	504
ATM Address Fields	506
ATM Connections	506
ATM and Multicasting	507
ATM Quality of Service	508
ATM Signaling and Connection Establishment	508
The ATM Connection-Establishment Process	508
Connection-Request Routing and Negotiation	509
ATM Connection-Management Messages	509
PNNI	510
Integrated Local Management Interface	510
LAN Emulation	511
The LANE Protocol Architecture	512
LANE Components	514
LAN Emulation Connection Types	515
LANE Operation	517
Initialization and Configuration	517
Joining and Registering with the LES	517
Finding and Joining the BUS	518
Data Transfer	518
Multiprotocol over ATM	519
Review Questions	520
For More Information	521

## **Chapter 32** MPLS 523

MPLS Terminology	524
MPLS Operations	525

MPLS/Tag-Switching Architecture	526
Control Component	526
Label Distribution Protocol	528
Forwarding Component	529
Label Encapsulation	530
Label Switching with ATM	531
Hierarchical Routing	532
MPLS-Based Virtual Private Networks	533
MPLS Quality of Service	535
MPLS Traffic Engineering	536
Summary	537
Review Questions	537
For More Information	538

<b>Chapter 33</b>	<b>Data-Link Switching</b>	<b>541</b>
	Background	541
	DLSw Contrasted with Source-Route Bridging	543
	DLSw SNA Support	544
	DLSw Switch-to-Switch Protocol	545
	DLSw Operation	546
	DLSw Processes	546
	DLSw Capabilities Exchange	547
	DLSw Circuit Establishment	547
	DLSw Flow Control	548
	DLSw Message Formats	550
	Review Questions	553

## **Part VI Network Protocols 555**

<b>Chapter 34</b>	<b>Open System Interconnection Protocols</b>	<b>557</b>
	Background	557
	OSI Networking Protocols	557
	OSI Physical and Data Link layers	558
	OSI Network Layer	558
	OSI Layer Standards	559

OSI Connectionless Network Service	559
OSI Connection-Oriented Network Service	559
Network Layer Addressing	560
OSI Protocols Transport Layer	562
OSI Protocols Session Layer	562
OSI Protocols Presentation Layer	563
OSI Protocols Application Layer	564
Common-Application Service Elements	565
Specific-Application Service Elements	565
OSI Protocols Application Processes	565
Review Questions	566

## **Chapter 35** Internet Protocols 569

Background 569

Internet Protocol 570

    IP Packet Format 571

    IP Addressing 572

        IP Address Format 572

        IP Address Classes 573

        IP Subnet Addressing 575

        IP Subnet Mask 575

        How Subnet Masks Are Used to Determine the Network Number 578

Address Resolution Protocol Overview 579

Internet Routing 579

    IP Routing 580

Internet Control Message Protocol 580

    ICMP Messages 581

    ICMP Router-Discovery Protocol 581

Transmission Control Protocol 582

    TCP Connection Establishment 582

    Positive Acknowledgment and Retransmission 583

    TCP Sliding Window 583

    TCP Packet Format 584

    TCP Packet Field Descriptions 585

User Datagram Protocol 585

Internet Protocols Application Layer Protocols 586

Summary 587

Review Questions 587

## **Chapter 36 IPv6 589**

Description of IPv6 Packet Header 590

Hexadecimal "Hex" 590

Addressing Description 590

Broadcasting Methods 591

Unicast 591

Multicast 592

Anycast 592

Summary 593

Review Questions 594

For More Information 594

## **Chapter 37 NetWare Protocols 597**

Background 597

NetWare Media Access 598

Internetwork Packet Exchange Overview 599

IPX Encapsulation Types 600

Service Advertisement Protocol 601

SAP Filters 601

NetWare Transport Layer 601

NetWare Upper-Layer Protocols and Services 602

NetWare Application Layer Services 602

IPX Packet Format 602

Summary 604

Review Questions 604

## **Chapter 38 AppleTalk 607**

Introduction 607

AppleTalk Network Components 607

Sockets 608

Nodes 609

Networks 609

Nonextended Networks 610

Extended Networks 610

Zones	611
AppleTalk Physical and Data Link Layers	612
EtherTalk	612
EtherTalk Link Access Protocol	612
LocalTalk	613
LocalTalk Link Access Protocol	613
Regulating Node Access to the Physical Media	614
Acquiring Node Addresses	614
TokenTalk	614
TokenTalk Link Access Protocol	615
FDDITalk	615
FDDITalk Link Access Protocol	615
Network Addresses	616
Network Address Assignment	617
AppleTalk Address Resolution Protocol	617
Address Mapping Table	617
Address Gleaning	618
AARP Operation	618
Datagram Delivery Protocol Overview	618
DDP Transmission Process	619
AppleTalk Transport Layer	619
Routing Table Maintenance Protocol Overview	620
RTMP Routing Tables	620
Name Binding Protocol Overview	620
Name Binding	622
AppleTalk Update-Based Routing Protocol	622
AURP Encapsulation	623
AppleTalk Transaction Protocol	623
AppleTalk Echo Protocol	624
AppleTalk Upper-Layer Protocols	624
AppleTalk Data Stream Protocol	625
Zone Information Protocol	626
AppleTalk Session Protocol	626
Printer Access Protocol Overview	627
AppleTalk Filing Protocol	627
AppleTalk Protocol Suite	627
DDP Packet Format	627
Summary	629

Review Questions 630

For More Information 630

## **Chapter 39 IBM Systems Network Architecture Protocols 633**

Background 633

Traditional SNA Environments 633

IBM SNA Architecture 634

IBM SNA Physical Entities 635

IBM SNA Data Link Control 636

IBM Network Addressable Units 637

IBM SNA Nodes 638

IBM Peer-Based Networking 639

APPN Components 639

IBM APPN Node Types 639

IBM APPN Services 640

IBM APPN Configuration Services 641

IBM APPN Directory Services 641

IBM APPN Topology and Routing Services 642

IBM APPN Session Services 643

Basic Information Unit Format 643

BIU Fields 643

Path Information Unit Format 645

PIU Fields 645

Summary 646

Review Questions 647

## **Chapter 40 DECnet 649**

Introduction 649

DECnet Phase IV Digital Network Architecture 650

Phase IV DNA Layers 650

Phase IV DECnet Addressing 651

DECnet/OSI Digital Network Architecture 652

DECnet/OSI DNA Implementations 652

DECnet Media Access 653

DECnet Routing 654

DECnet End Communications Layer	655
Network-Services Protocol	655
DECnet/OSI Transport Layer	655
DECnet Phase IV Upper Layers	656
User Layer	656
Network Management Layer	656
Network Application Layer	656
Session Control Layer	657
DECnet/OSI Upper Layers	657
Application Layer	657
Presentation Layer	657
Session Layer	658
Summary	659
Review Questions	659

## **Part VII Routing Protocols 661**

### **Chapter 41 Border Gateway Protocol 663**

Introduction	663
BGP Attributes	664
Weight Attribute	664
Local Preference Attribute	665
Multi-Exit Discriminator Attribute	666
Origin Attribute	666
AS_path Attribute	667
Next-Hop Attribute	667
Community Attribute	669
BGP Path Selection	671
Review Questions	671
For More Information	671

### **Chapter 42 Enhanced IGRP 675**

Enhanced IGRP Capabilities and Attributes	675
Underlying Processes and Technologies	676

Routing Concepts	677
Neighbor Tables	677
Topology Tables	677
Route States	678
Route Tagging	678
Enhanced IGRP Packet Types	679
Summary	679
Review Questions	679
For More Information	680

**Chapter 43 IBM Systems Network Architecture Routing 683**

Background	683
IBM SNA Session Connectors	683
IBM SNA Transmission Groups	684
IBM SNA Explicit and Virtual Routes	684
IBM SNA Class of Service	685
COS in Subarea Routing	685
COS in APPN Routing	686
IBM SNA Subarea Routing	688
IBM Advanced Peer-to-Peer Networking Routing	689
IBM APPN Node Type 2.1 Routing	689
Intermediate Session Routing	690
High-Performance Routing	690
IBM APPN DLUR/S Routing	691
IBM APPN Connection Network	691
IBM APPN Border Node	692
Review Questions	693

**Chapter 44 Interior Gateway Routing Protocol 695**

Background	695
IGRP Protocol Characteristics	695
Stability Features	696
Timers	697
Summary	698

Review Questions 698

For More Information 698

<b>Chapter 45</b>	<b>Internet Protocol Multicast</b>	<b>701</b>
	Background	701
	Multicast Group Concept	702
	IP Multicast Addresses	702
	IP Class D Addresses	702
	Reserved Link Local Addresses	703
	Globally Scoped Address	703
	Limited Scope Addresses	704
	Glop Addressing	704
	Layer 2 Multicast Addresses	704
	Ethernet MAC Address Mapping	705
	Internet Group Management Protocol	706
	IGMP Version 1	706
	IGMP Version 2	706
	Multicast in the Layer 2 Switching Environment	707
	Cisco Group Management Protocol	707
	IGMP Snooping	708
	Multicast Distribution Trees	708
	Source Trees	708
	Shared Trees	709
	Multicast Forwarding	711
	Reverse Path Forwarding	711
	RPF Check	711
	Protocol-Independent Multicast	713
	PIM Dense Mode	713
	PIM Sparse Mode	713
	Sparse-Dense Mode	714
	Multiprotocol Border Gateway Protocol	714
	Multicast Source Discovery Protocol	715
	Anycast RP—Logical RP	716
	Multicast Address Dynamic Client Allocation Protocol	717
	Multicast-Scope Zone Announcement Protocol	717
	Reliable Multicast—Pragmatic General Multicast	717

Review Questions	717
For More Information	718

## **Chapter 46** NetWare Link-Services Protocol 721

Background	721
NLSP Hierarchical Routing	722
Hierarchical Routing Efficiencies	722
NLSP Adjacencies	723
Establishing a New WAN Adjacency	723
Maintaining Adjacencies over LANs	723
Sending LAN Hello Packets	724
NLSP Operation	724
NLSP Hierarchical Addressing	725
NLSP Hello Packets	726
WAN Hello Packet	726
WAN Hello Packet Fields	727
NLSP LAN Hello Packets	727
Level 1 LAN Hello Packet Fields	728
Review Questions	729

## **Chapter 47** Open Shortest Path First 731

Background	731
Routing Hierarchy	732
SPF Algorithm	734
Packet Format	734
Additional OSPF Features	735
Review Questions	736

## **Chapter 48** Open System Interconnection Routing Protocols 739

OSI Networking Terminology	739
Overview of OSI Routing Operation	740
ES-IS	740
ES-IS Configuration	741
ES-IS Addressing Information	741

IS-IS	742
Integrated IS-IS	742
IS-IS Routing Architecture Support	742
Packet Types	744
TLVS	748
Metrics Defined in IS-IS	749
IS-IS LSP Processing	749
IS-IS DIS Election	750
Avoiding Black Holes with IS-IS	750
Route Leaking	751
MPLS Traffic Engineering	751
IDRP	751
IDRP Terminology	752
IDRP Routing	752
Summary	753
Review Questions	753
For More Information	753

**Chapter 49** Routing Information Protocol 757

Background	757
Routing Updates	757
RIP Routing Metric	758
RIP Stability Features	758
RIP Timers	758
Packet Formats	758
RIP Packet Format	759
RIP 2 Packet Format	759
Summary	761
Review Questions	761
For More Information	761

**Chapter 50** Resource Reservation Protocol 763

Background	763
RSVP Data Flows	764
RSVP Data Flows Process	765

RSVP Quality of Service	766
RSVP Session Startup	766
RSVP Reservation Style	766
Wildcard-Filter Style	766
Fixed-Filter Style	767
Shared-Explicit Style	767
RSVP Reservation Style Implications	767
RSVP Soft State Implementation	768
RSVP Operational Model	768
General RSVP Protocol Operation	769
RSVP Tunneling	770
Weighted Fair-Queuing Solution	770
RSVP Messages	770
Reservation-Request Messages	771
Path Messages	771
Error and Confirmation Messages	771
Tear-down Messages	772
RSVP Packet Format	772
RSVP Message Header Fields	773
RSVP Object Fields	774
Summary	775
Review Questions	776
For More Information	776

## **Chapter 51** Simple Multicast Routing Protocol 779

Introduction	779
SMRP Multicast Transport Services	781
SMRP Multicast Address Management	782
SMRP Multicast Transaction Protocol	782
SMRP Node Management	783
SMRP Multicast Routes	784
SMRP Multicast Group Management	785
Forwarding Multicast Datagrams	786
Handling SMRP Topology Changes	786
Disappearing Member Endpoints	786
Stranded Groups	786
SMRP Transaction Example	787

SMRP Packet Format 787

Review Questions 789

## **Part VIII Network Management 791**

### **Chapter 52 Security Technologies 793**

Why Is Network Security Important? 793

Security Threats 794

Unauthorized Access 794

Weak Authentication 794

Passwords 795

Packet Sniffers 795

Application Layer 795

Viruses, Worms, and Trojan Horses 796

IP Spoofing 796

Denial of Service 796

Security Policy 797

Defense-in-Depth Security Solution 798

Threat Mitigation 801

Security Tools 802

Summary 804

Review Questions 805

For More Information 805

Websites 805

Books 806

Mailing Lists and Newsletters 806

Glossary Terms 806

### **Chapter 53 Directory-Enabled Networking 809**

Object-Oriented Information Modeling 809

Data Models Are Bound to Specific Types of Repositories 811

Realization of the Information Model 812

The Common Information Model 813

DEN, an Extension of CIM 814

A Brief Introduction to Directories 815

Directories and Directory Services 815

What Is a Directory? 815

Characteristics of a Directory	818
What Is a Directory Service?	818
Current Uses of the Directory	819
Motivation for DEN and Intelligent Networking	819
Distributing Intelligence in Networked Applications	822
Use of the Directory in Intelligent Networking	823
Challenges of Current Directory Services	824
An Overview of DEN	824
Networks and DEN	825
Directory Service and Network Management	827
The Extended Schema and Other Device Schemata	827
Network Applications Integrated with the Directory and Other Network Protocols	828
Benefits of Using DEN	829
How DEN Is Used in Cisco Products	830
The Directory-Enabled Networking Vision	831
Summary	831
Review Questions	832
For More Information	832

## **Chapter 54 Network Caching Technologies 837**

Introduction	837
Network Caching	837
How Web Caching Works	838
The Benefits of Localizing Traffic Patterns	838
Network-Integrated Caches	839
Existing Caching Solutions	839
Proxy Servers	839
Standalone Caches	840
Browser-Based Client Caching	840
WCCP Network Caching	841
Network-Based Shared Caching	842
Transparent Network Caching	842
Hierarchical Deployment	843
Scalable Clustering	845
Fault Tolerance and Fail Safety	846
WCCP Multihome Router Support	846
Overload Bypass	847
Dynamic Client Bypass	847
Reverse Proxy Caching	850

Reverse Proxy Caching Function 850

Ensuring Fresh Content 851

HTTP Caching Standards 852

Cache Engine Content Freshness Controls 852

Browser Freshness Controls 853

Summary 853

Review Questions 854

## **Chapter 55** Storage Networking 857

What Is a SAN? 858

Fibre Channel Protocol 861

Fibre Channel Topologies 863

Point-to-Point Topology 863

Arbitrated-Loop Topology 863

Private Loops 864

Switched-Fabric Topology 864

Fibre Channel Port Types 864

Fibre Channel Communication Model 866

Fibre Channel Addressing 869

Fibre Channel Frame Format 870

Fibre Channel Classes of Service 872

Fibre Channel Fabric Routing 873

Fibre Channel Flow Control 873

Fibre Channel Distributed Fabric Services 875

Directory Services 875

Zone Services 875

Management Services 875

State Change Notification Services 876

The iSCSI Protocol 876

iSCSI Communication Model 876

iSCSI Frame Format 877

iSCSI Services 879

Directory Services 879

Authentication Services 879

iSCSI Boot Services 880

Summary 880

**Chapter 56 IBM Network Management 885**

Background 885

IBM Network-Management Functional Areas 886

IBM Configuration Management 886

IBM Performance and Accounting Management 886

IBM Problem Management 886

IBM Operations Management 887

IBM Change Management 887

IBM Network-Management Architectures 888

Open-Network Architecture 888

SystemView 888

IBM Network-Management Platforms 889

NetView 889

LAN Network Manager 890

Simple Network Management Protocol 890

Review Questions 890

**Chapter 57 Remote Monitoring 893**

Background 893

RMON Groups 894

Review Questions 895

**Chapter 58 Simple Network Management Protocol 897**

SNMP Basic Components 898

Basic SNMP Commands 899

SNMP Management Information Base 900

SNMP and Data Representation 902

SNMP Version 1 902

SNMPv1 and the Structure of Management Information 902

SNMPv1 and ASN.1 Data Types 902

SNMPv1 and SMI-Specific Data Types 903

SNMP MIB Tables 903

SNMPv1 Protocol Operations 903

SNMP Version 2 904

SNMPv2 and the Structure of Management Information 904

SMI Information Modules 904

SNMPv2 Protocol Operations	905
Security Considerations	905
SNMP Version 3	906
Security Threads	906
Modular Architecture	907
Security Architecture	909
User-Based Security Model (USM)	909
View-Based Access Control Model (VACM)	910
SNMP Management	910
SNMP Reference: SNMP Message Formats	911
SNMP Message Header	911
SNMP PDU	911
GetBulk PDU Format	912
Trap PDU Format	913
Summary	913
Review Questions	914
<b>Chapter 59</b> Quality of Service Networking	917
Introduction	917
QoS Concepts	918
Basic QoS Architecture	919
QoS Identification and Marking	920
Classification	920
QoS Within a Single Network Element	920
Congestion Management	920
Queue Management	920
Link Efficiency	921
Traffic Shaping and Policing	921
QoS Management	922
End-to-End QoS Levels	922
Modular QoS Command-Line Interface (MQC)	923
QoS Architectures	924
Integrated Services Architecture	924
Differentiated Services Architecture	925
Differentiated Services Byte	925
Classification—Identifying Flows	925

- QoS Policy Setting with Policy-Based Routing 926
  - CAR: Setting IP Precedence 927
    - 7500 Platform 928
  - NBAR: Dynamic Identification of Flows 928
- Congestion-Management Tools 928
  - FIFO: Basic Store-and-Forward Capability 929
  - PQ: Prioritizing Traffic 929
  - CQ: Guaranteeing Bandwidth 930
  - Flow-Based WFQ: Creating Fairness Among Flows 931
    - Cooperation Between WFQ and QoS Signaling Technologies 933
  - Class-Based WFQ: Ensuring Network Bandwidth 935
- Queue Management (Congestion-Avoidance Tools) 937
  - WRED: Avoiding Congestion 937
  - WRED Cooperation with QoS Signaling Technologies 937
  - Flow RED: RED for Non-TCP-Compliant Flows 938
    - 7500 Platform 939
- Traffic-Shaping and Policing Tools 939
  - CAR: Managing Access Bandwidth Policy and Performing Policing 939
  - GTS: Controlling Outbound Traffic Flow 940
  - FRTS: Managing Frame-Relay Traffic 941
- Link Efficiency Mechanisms 942
  - LFI: Fragmenting and Interleaving IP Traffic 942
  - RTP Header Compression: Increasing Efficiency of Real-Time Traffic 943
  - RSVP: Guaranteeing QoS 944
- QoS Management 945
- QoS on Ethernet 946
- Multiprotocol Label Switching (MPLS): Allowing Flexible Traffic Engineering 947
  - QoS Policy Control 947
- SNA ToS 948
- QoS for Packetized Voice 948
- QoS for Streaming Video 949
- Automated QoS 951
- Summary 951
  - QoS Looking Forward 952
- Review Questions 952
- For More Information 952
