Handbooks in TRANSPORT Volume 3

Edited by K.J. Button and D.A. Hensher

PERGAMON

CONTENTS

Introduction to the series		v
Chapt	ter 1	
Intro	oduction	
KENI	NETH J. BUTTON and DAVID A. HENSHER	1
1.	Introduction	1
2.	What are transport systems?	2
3.	Transport systems from the user's perspective	3
4.	Transport systems and transport policy	4
5.	Traffic control	6
6.	The Handbook	7
Chapt	eer 2	
Tran	sport Planning	
DAV	ID BANISTER	9
1.	The three great changes	9
2.	The new agenda	11
3.	The new challenge	13
4.	Into the new millennium	16
Re	eferences	19
Chapt	er 3	
	fic Reduction	21
PHIL	LIP B. GOODWIN	
1.	Introduction: Why did the idea of traffic reduction become	
	important?	21
2.	The instruments and objectives of traffic reduction	23
	2.1. Town center pedestrianization	23
	2.2. Residential-area traffic calming	25
	2.3. National parks and tourist attractions	28
	2.4. Transport pricing: Parking, fuel taxes, and road user charges	28
	2.5. Improvements in alternatives	30
3.	Overall assessment	31
Re	eferences	31

viii Contents

Chapter 4	
Equity versus Efficiency in Transport Systems	
CHRIS NASH	33
1. Introduction	33
2. Efficiency versus equity – key concepts	33
3. Transport pricing	38
4. Appraisal	41
5. Transport and social exclusion	42
6. Conclusions	43
References	44
Chapter 5	
The Concept of Optimal Transport Systems	
ROGER VICKERMAN	47
1. Introduction	47
2. Optimal networks	48
3. Transport and the efficiency of the economy	51
4. Transport, labor markets and efficient cities	52
5. Transport in a general equilibrium model of the econ	nomy 54
6. Implications for appraisal and evaluation of transpor	rt .
investments	56
7. Conclusion	57
References	58
Chapter 6	
Economics of Transport Networks	
KENNETH J. BUTTON	61
1. The concept of networks	61
2. Standardization and networks	62
3. Economies of scale, scope, and density	63
4. User benefits and costs	65
5. Hub-and-spoke networks	68
6. Public sector assessment of network investment	71
7. Regulatory issues	73
References	74
Chapter 7	
Traffic Congestion and Congestion Pricing	
ROBIN LINDSEY and ERIK VERHOEF	77
1. Introduction	77
2. Congestion pricing in time-independent models	79
3. Congestion pricing in time-dependent models	80

Contents

4	Carried 1 4 th the state of the		
4.	a to the same in congestion pricing	85	
	4.1. Networks	86	
	4.2. Heterogeneity of users	89	
	4.3. Step tolls	91	
	4.4. Uncertainty and information provision	91	
	4.5. Interactions with other economic sectors	93	
	4.6. Other traffic-related externalities	95	
_	4.7. Congestion pricing by private operators	95	
5.	g	97	
	5.1. Networks	99	
	5.2. Step tolls	99	
	5.3. Congestion pricing by private operators	99	
6.	F F F	100	
7.		102	
R	eferences	102	
Chap	ter 8		
	lal Diversion		
DAV	ID A. HENSHER	107	
1.	Introduction	107	
2.	The changing context for studying modal diversion	108	
3.	Representing behavioral responsiveness	110	
	3.1. Elasticities	110	
	3.2. Elasticities in the context of passenger activities: An example of ticket choice	111	
	3.3. Elasticities in the context of freight activity	114	
	3.4. The calculation of changes in modal shares using a joint mode and	111	
	parking choice model	115	
4.	Conclusions	122	
Re	eferences	122	
Chapt	er 9		
Indu	ced Travel and User Benefits: Clarifying Definitions and		
Mea	surement for Urban Road Infrastructure		
	R W. ABELSON and DAVID A. HENSHER	125	
1.	Introduction	125	
2.	The meaning of induced travel	126	
3.	8		
4.	The valuation of benefits of induced travel	127 130	
5.	Errors in the valuation of induced travel	135	
	5.1. Evaluating induced travel from modal changes	137	
6.	Modeling induced travel	139	

7.	Conclusions	141
R	eferences	141
Chap	ter 10	
Cost	-benefit Analysis in Transport	
	ER MACKIE and JOHN NELLTHORP	143
1.	Introduction	143
2.	Why appraise projects?	143
3.		145
	3.1. Overview	145
	3.2. User benefit estimation	148
	3.3. Revenues and costs	154
	3.4. Values of time and safety	157
	3.5. The process	162
4.	Challenges in cost-benefit analysis	164
	4.1. Extending CBA to the environmental impacts of transport	165
	4.2. Wider economic impacts	166
	4.3. CBA and frameworks	169
5.	Conclusion	172
R	eferences	173
Chapi	ter 11	
	sport Subsidies	
	NER ROTHENGATTER	175
1.	Introduction	175
2.	Typology of subsidization	176
	2.1. Subsidies for the transport sector as defined in SNA statistics	176
	2.2. Further direct and open payments of the state to the transport sector	178
	2.3. Indirect and hidden subsidies	180
3.	Normative reasons for subsidization in the transport sector	183
	3.1. Public- or merit-good properties of traded goods and services	184
	3.2. Externalities of transport	185
	3.3. Risk aversion of investors in the case of sunk costs	188
	3.4. Natural monopolies and deficits occurring with pricing/investment	
	strategies in these markets	189
	3.5. Redistribution of income	191
4.	Positive reasons for subsidization in the transport sector	191
	4.1. Normative versus positive economics	191
	4.2. Interest groups and stakeholders in the transport sector	192
_	4.3. Example: The case of aircraft subsidies	195
5.	Conclusions	196
Re	eferences	197

•	structure Capacity	
	LAKSHMANAN and WILLIAM P. ANDERSON	209
1.	Introduction and overview	209
2.	Infrastructure capacity: Definition and measurement	210
	2.1. Highway capacity analysis	213
	2.2. Transit capacity analysis	216
	2.3. Air travel capacity analysis	218
3.	Infrastructure capacity expansion: Alternative approaches	s 219
	3.1. New infrastructure	220
	3.2. More effective capacity from current infrastructure	221
	3.3. Manipulating infrastructure demand	223
	3.4. Promoting public transit	226
	3.5. Land use policies and regulations	226
4.	Conclusion	226
Re	eferences	227
