

# Market Operations in Electric Power Systems

*Forecasting, Scheduling, and Risk Management*

MOHAMMAD SHAHIDEHPOUR  
HATIM YAMIN  
ZUYI LI

# **Contents**

Preface . . . . .	XIII
-------------------	------

## **CHAPTER**

1 Market Overview in Electric Power Systems . . . . .	1
1.1 Introduction . . . . .	1
1.2 Market Structure and Operation . . . . .	2
1.2.1 Objective of Market Operation . . . . .	2
1.2.2 Electricity Market Models . . . . .	4
1.2.3 Market Structure . . . . .	5
1.2.4 Power Market Types . . . . .	9
1.2.5 Market Power . . . . .	13
1.2.6 Key Components in Market Operation . . . . .	14
1.3 Overview of the Book . . . . .	15
1.3.1 Information Forecasting . . . . .	15
1.3.2 Unit Commitment in Restructured Markets . . . . .	17
1.3.3 Arbitrage in Electricity Markets . . . . .	18
1.3.4 Market Power and Gaming . . . . .	19
1.3.5 Asset Valuation and Risk Management . . . . .	19
1.3.6 Ancillary Services Auction . . . . .	19
1.3.7 Transmission Congestion Management and Pricing . . . . .	19
2 Short-Term Load Forecasting . . . . .	21
2.1 Introduction . . . . .	21

2.1.1	Applications of Load Forecasting . . . . .	21
2.1.2	Factors Affecting Load Patterns . . . . .	22
2.1.3	Load Forecasting Categories . . . . .	23
2.2	Short-Term Load Forecasting with ANN . . . . .	25
2.2.1	Introduction to ANN . . . . .	25
2.2.2	Application of ANN to STLF . . . . .	29
2.2.3	STLF using MATLAB'S ANN Toolbox . . . . .	31
2.3	ANN Architecture for STLF . . . . .	33
2.3.1	Proposed ANN Architecture . . . . .	33
2.3.2	Seasonal ANN . . . . .	34
2.3.3	Adaptive Weight . . . . .	36
2.3.4	Multiple-Day Forecast . . . . .	37
2.4	Numerical Results . . . . .	38
2.4.1	Training and Test Data . . . . .	38
2.4.2	Stopping Criteria for Training Process . . . . .	42
2.4.3	ANN Models for Comparison . . . . .	43
2.4.4	Performance of One-Day Forecast . . . . .	45
2.4.5	Performance of Multiple-Day Forecast . . . . .	51
2.5	Sensitivity Analysis . . . . .	53
2.4.1	Possible Models . . . . .	53
2.4.2	Sensitivity to Input Factors . . . . .	54
2.4.3	Inclusion of Temperature Implicitly . . . . .	55
3	Electricity Price Forecasting . . . . .	57
3.1	Introduction . . . . .	57
3.2	Issues of Electricity Pricing and Forecasting . . . . .	60
3.2.1	Electricity Price Basics . . . . .	60
3.2.2	Electricity Price Volatility . . . . .	61
3.2.3	Categorization of Price Forecasting . . . . .	63
3.2.4	Factors Considered in Price Forecasting . . . . .	64
3.3	Electricity Price Simulation Module . . . . .	65
3.3.1	A Sample of Simulation Strategies . . . . .	66
3.3.2	Simulation Example . . . . .	67
3.4	Price Forecasting Module based on ANN . . . . .	69
3.4.1	ANN Factors in Price Forecasting . . . . .	70
3.4.2	118-Bus System Price Forecasting with ANN . . . . .	72
3.5	Performance Evaluation of Price Forecasting . . . . .	77

3.5.1 Alternative Methods . . . . .	77
3.5.2 Alternative MAPE Definition . . . . .	78
3.6 Practical Case Studies . . . . .	81
3.6.1 Impact of Data Pre-Processing . . . . .	82
3.6.2 Impact of Quantity of Training Vectors . . . . .	84
3.6.3 Impact of Quantity of Input Factors . . . . .	86
3.6.4 Impact of Adaptive Forecasting . . . . .	89
3.6.5 Comparison of ANN Method with Alternative Methods	90
3.7 Price Volatility Analysis Module . . . . .	91
3.7.1 Price Spikes Analysis . . . . .	91
3.7.2 Probability Distribution of Electricity Price . . . . .	105
3.8 Applications of Price Forecasting . . . . .	111
3.8.1 Application of Point Price Forecast to Making Generation Schedule . . . . .	111
3.8.2 Application of Probability Distribution of Price to Asset Valuation and Risk Analysis . . . . .	112
3.8.3 Application of Probability Distribution of Price to Options Valuation . . . . .	112
3.8.4 Application of Conditional Probability Distribution of Price on Load to Forward Price Forecasting . . . . .	112
4 Price-Based Unit Commitment . . . . .	115
4.1 Introduction . . . . .	115
4.2 PBUC Formulation . . . . .	117
4.2.1 System Constraints . . . . .	118
4.2.2 Unit Constraints . . . . .	118
4.3 PBUC Solution . . . . .	119
4.3.1 Solution without Emission or Fuel Constraints . . . . .	120
4.3.2 Solution with Emission and Fuel Constraints . . . . .	129
4.4 Discussion on Solution Methodology . . . . .	134
4.4.1 Energy Purchase . . . . .	134
4.4.2 Derivation of Steps for Updating Multipliers . . . . .	134
4.4.3 Optimality Condition . . . . .	137
4.5 Additional Features of PBUC . . . . .	139
4.5.1 Different Prices among Buses . . . . .	139
4.5.2 Variable Fuel Price as a Function of Fuel Consumption	140
4.5.3 Application of Lagrangian Augmentation . . . . .	141
4.5.4 Bidding Strategy based on PBUC . . . . .	145

4.6	Case Studies . . . . .	150
4.5.1	Case Study of 5-Unit System . . . . .	150
4.5.2	Case Study of 36-Unit System . . . . .	154
4.7	Conclusions . . . . .	160
5	Arbitrage in Electricity Markets . . . . .	161
5.1	Introduction . . . . .	161
5.2	Concept of Arbitrage . . . . .	161
5.2.1	What is Arbitrage . . . . .	161
5.2.2	Usefulness of Arbitrage . . . . .	162
5.3	Arbitrage in a Power Market . . . . .	163
5.3.1	Same-Commodity Arbitrage . . . . .	163
5.3.2	Cross-Commodity Arbitrage . . . . .	164
5.3.3	Spark Spread and Arbitrage . . . . .	164
5.3.4	Applications of Arbitrage Based on PBUC . . . . .	165
5.4	Arbitrage Examples in Power Market . . . . .	166
5.4.1	Arbitrage between Energy and Ancillary Service . . . . .	166
5.4.2	Arbitrage of Bilateral Contract . . . . .	171
5.4.3	Arbitrage between Gas and Power . . . . .	174
5.4.4	Arbitrage of Emission Allowance . . . . .	182
5.4.5	Arbitrage between Steam and Power . . . . .	186
5.5	Conclusions . . . . .	188
6	Market Power Analysis Based on Game Theory . . . . .	191
6.1	Introduction . . . . .	191
6.2	Game Theory . . . . .	192
6.2.1	An Instructive Example . . . . .	192
6.2.2	Game Methods in Power Systems . . . . .	195
6.3	Power Transactions Game . . . . .	195
6.3.1	Coalitions among Participants . . . . .	197
6.3.2	Generation Cost for Participants . . . . .	198
6.3.3	Participant's Objective . . . . .	201
6.4	Nash Bargaining Problem . . . . .	202
6.4.1	Nash Bargaining Model for Transaction Analysis . . . . .	203
6.4.2	Two-Participant Problem Analysis . . . . .	204
6.4.3	Discussion on Optimal Transaction and Its Price . . . . .	206

6.4.4	Test Results . . . . .	207
6.5	Market Competition with Incomplete Information . . . . .	215
6.5.1	Participants and Bidding Information . . . . .	215
6.5.2	Basic Probability Distribution of the Game . . . . .	216
6.5.3	Conditional Probabilities and Expected Payoff . . . . .	217
6.5.4	Gaming Methodology . . . . .	218
6.6	Market Competition for Multiple Electricity Products . . . . .	222
6.6.1	Solution Methodology . . . . .	222
6.6.2	Study System . . . . .	223
6.6.3	Gaming Methodology . . . . .	225
6.7	Conclusions . . . . .	230
7	Generation Asset Valuation and Risk Analysis . . . . .	233
7.1	Introduction . . . . .	233
7.1.1	Asset Valuation . . . . .	233
7.1.2	Value at Risk (VaR) . . . . .	234
7.1.3	Application of VaR to Asset Valuation in Power Markets	235
7.2	VaR for Generation Asset Valuation . . . . .	236
7.2.1	Framework of the VaR Calculation . . . . .	236
7.2.2	Spot Market Price Simulation . . . . .	238
7.2.3	A Numerical Example . . . . .	240
7.2.4	A Practical Example . . . . .	246
7.2.5	Sensitivity Analysis . . . . .	258
7.3	Generation Capacity Valuation . . . . .	267
7.3.1	Framework of VaR Calculation . . . . .	268
7.3.2	An Example . . . . .	268
7.3.3	Sensitivity Analysis . . . . .	270
7.4	Conclusions . . . . .	273
8	Security-Constrained Unit Commitment . . . . .	275
8.1	Introduction . . . . .	275
8.2	SCUC Problem Formulation . . . . .	276
8.2.1	Discussion on Ramping Constraints . . . . .	280
8.3	Benders Decomposition Solution of SCUC . . . . .	285
8.3.1	Benders Decomposition . . . . .	286
8.3.2	Application of Benders Decomposition to SCUC . . . . .	287

8.3.3	Master Problem Formulation . . . . .	287
8.4	SCUC to Minimize Network Violation . . . . .	290
8.4.1	Linearization of Network Constraints . . . . .	290
8.4.2	Subproblem Formulation . . . . .	293
8.4.3	Benders Cuts Formulation . . . . .	296
8.4.4	Case Study . . . . .	296
8.5	SCUC Application to Minimize EUE - Impact of Reliability	303
8.5.1	Subproblem Formulation and Solution . . . . .	303
8.5.2	Case Study . . . . .	306
8.6	Conclusions . . . . .	310
9	Ancillary Services Auction Market Design . . . . .	311
9.1	Introduction . . . . .	311
9.2	Ancillary Services for Restructuring . . . . .	313
9.3	Forward Ancillary Services Auction – Sequential Approach	315
9.3.1	Two Alternatives in Sequential Ancillary Services Auction	317
9.3.2	Ancillary Services Scheduling . . . . .	318
9.3.3	Design of the Ancillary Services Auction Market . . . . .	320
9.3.4	Case Study . . . . .	322
9.3.5	Discussions . . . . .	334
9.4	Forward Ancillary Services Auction – Simultaneous Approach . . . . .	334
9.4.1	Design Options for Simultaneous Auction of Ancillary Services . . . . .	336
9.4.2	Rational Buyer Auction . . . . .	338
9.4.3	Marginal Pricing Auction . . . . .	347
9.4.4	Discussions . . . . .	354
9.5	Automatic Generation Control (AGC) . . . . .	354
9.5.1	AGC Functions . . . . .	354
9.5.2	AGC Response . . . . .	356
9.5.3	AGC Units Revenue Adequacy . . . . .	357
9.5.4	AGC Pricing . . . . .	358
9.5.5	Discussions . . . . .	366
9.6	Conclusions . . . . .	367

10	Transmission Congestion Management and Pricing . . . . .	369
10.1	Introduction . . . . .	369
10.2	Transmission Cost Allocation Methods . . . . .	372
10.2.1	Postage-Stamp Rate Method . . . . .	372
10.2.2	Contract Path Method . . . . .	373
10.2.3	MW-Mile Method . . . . .	373
10.2.4	Unused Transmission Capacity Method . . . . .	374
10.2.5	MVA-Mile Method . . . . .	376
10.2.6	Counter-Flow Method . . . . .	376
10.2.7	Distribution Factors Method . . . . .	376
10.2.8	AC Power Flow Method . . . . .	379
10.2.9	Tracing Methods . . . . .	379
10.2.10	Comparison of Cost Allocation Methods . . . . .	386
10.3	Examples for Transmission Cost Allocation Methods . . . . .	387
10.3.1	Cost Allocation Using Distribution Factors Method . . . . .	388
10.3.2	Cost Allocation Using Bialek's Tracing Method . . . . .	389
10.3.3	Cost Allocation Using Kirschen's Tracing Method . . . . .	391
10.3.4	Comparing the Three Cost Allocation Methods . . . . .	392
10.4	LMP, FTR, and Congestion Management . . . . .	393
10.4.1	Locational Marginal Price (LMP) . . . . .	393
10.4.2	LMP Application in Determining Zonal Boundaries . . . . .	405
10.4.3	Firm Transmission Right (FTR) . . . . .	408
10.4.4	FTR Auction . . . . .	412
10.4.5	Zonal Congestion Management . . . . .	421
10.5	A Comprehensive Transmission Pricing Scheme . . . . .	431
10.5.1	Outline of the Proposed Transmission Pricing Scheme . . . . .	432
10.5.2	Prioritization of Transmission Dispatch . . . . .	434
10.5.3	Calculation of Transmission Usage and Congestion Charges and FTR Credits . . . . .	439
10.5.4	Numerical Example . . . . .	443
10.6	Conclusions . . . . .	453

**APPENDIX**

A	List of Symbols . . . . .	455
---	---------------------------	-----

B Mathematical Derivation . . . . .	461
B.1 Derivation of Probability Distribution . . . . .	461
B.2 Lagrangian Augmentation with Inequality Constraints . .	462
C RTS Load Data . . . . .	467
D Example Systems Data . . . . .	469
D.1 5-Unit System . . . . .	469
D.2 36-Unit System . . . . .	472
D.3 6-Unit System . . . . .	476
D.4 Modified IEEE 30-Bus System . . . . .	477
D.5 118-Bus System . . . . .	479
E Game Theory Concepts . . . . .	483
E.1 Equilibrium in Non-Cooperative Games . . . . .	483
E.2 Characteristics Function . . . . .	484
E.3 N-Players Cooperative Games . . . . .	485
E.4 Games with Incomplete Information . . . . .	486
F Congestion Charges Calculation . . . . .	489
F.1 Calculations of Congestion Charges using Contributions of Generators . . . . .	489
F.2 Calculations of Congestion Charges using Contributions of Loads . . . . .	493
References . . . . .	495
Index . . . . .	509
