## Section I Measurements

- 1 **Comparison of Biological Scale Resolution from CTD and Microstructure Measurements**.....3  
*Fabian Wolk, Laurent Seuront, Hidekatsu Yamazaki, and Sophie Leterme*
- 2 **Measurement of Zooplankton Distributions with a High-Resolution Digital Camera System**.....17  
*Mark C. Benfield, Christopher J. Schwehm, Rodney G. Fredericks, Gregory Squyres, Sean F. Keenan, and Mark V. Trevorrow*
- 3 **Planktonic Layers: Physical and Biological Interactions on the Small Scale**.....31  
*Timothy J. Cowles*
- 4 **Scales of Biological-Physical Coupling in the Equatorial Pacific**.....51  
*Peter G. Strutton and Francisco P. Chavez*
- 5 **Acoustic Remote Sensing of Photosynthetic Activity in Seagrass Beds**.....65  
*Jean-Pierre Hermand*
- 6 **Multiscale *in Situ* Measurements of Intertidal Benthic Production and Respiration**.....97  
*Dominique Davoult, Aline Migné, and Nicolas Spilmont*
- 7 **Spatially Extensive, High Resolution Images of Rocky Shore Communities**.....109  
*David R. Blakeway, Carlos D. Robles, David A. Fuentes, and Hong-Lie Qiu*
- 8 **Food Web Dynamics in Stable Isotope Ecology: Time Integration of Different Trophic Levels**.....125  
*Catherine M. O'Reilly, Pieter Verburg, Robert E. Hecky, Pierre-Denis Plisnier, and Andrew S. Cohen*
- 9 **Synchrotron-Based Infrared Imaging of *Euglena gracilis* Single Cells**.....135  
*Carol J. Hirschmugl, Maria Bunta, and Mario Giordano*
- 10 **Signaling during Mating in the Pelagic Copepod, *Temora longicornis*** ....149  
*Jeannette Yen, Anne C. Prusak, Michael Caun, Michael Doall, Jason Brown, and J. Rudi Strickler*

<b>11</b>	<b>Experimental Validation of an Individual-Based Model for Zooplankton Swarming</b> .....	<b>161</b>
	<i>Neil S. Banas, Dong-Ping Wang, and Jeannette Yen</i>	

## **Section II Analysis**

<b>12</b>	<b>On Skipjack Tuna Dynamics: Similarity at Several Scales</b> .....	<b>183</b>
	<i>Aldo P. Solari, Jose Juan Castro, and Carlos Bas</i>	
<b>13</b>	<b>The Temporal Scaling of Environmental Variability in Rivers and Lakes</b> .....	<b>201</b>
	<i>Hélène Cyr, Peter J. Dillon, and Julie E. Parker</i>	
<b>14</b>	<b>Biogeochemical Variability at the Sea Surface: How It Is Linked to Process Response Times</b> .....	<b>215</b>
	<i>Amala Mahadevan and Janet W. Campbell</i>	
<b>15</b>	<b>Challenges in the Analysis and Simulation of Benthic Community Patterns</b> .....	<b>229</b>
	<i>Mark P. Johnson</i>	
<b>16</b>	<b>Fractal Dimension Estimation in Studies of Epiphytal and Epilithic Communities: Strengths and Weaknesses</b> .....	<b>245</b>
	<i>John Davenport</i>	
<b>17</b>	<b>Rank-Size Analysis and Vertical Phytoplankton Distribution Patterns</b> ...	<b>257</b>
	<i>James G. Mitchell</i>	
<b>18</b>	<b>An Introduction to Wavelets</b> .....	<b>279</b>
	<i>Igor M. Dremine, Oleg V. Ivanov, and Vladimir A. Nechitailo</i>	
<b>19</b>	<b>Fractal Characterization of Local Hydrographic and Biological Scales of Patchiness on Georges Bank</b> .....	<b>297</b>
	<i>Karen E. Fisher, Peter H. Wiebe, and Bruce D. Malamud</i>	
<b>20</b>	<b>Orientation of Sea Fans Perpendicular to the Flow</b> .....	<b>321</b>
	<i>Thomas Osborn and Gary K. Ostrander</i>	
<b>21</b>	<b>Why Are Large, Delicate, Gelatinous Organisms So Successful in the Ocean's Interior?</b> .....	<b>329</b>
	<i>Thomas Osborn and Richard T. Barber</i>	
<b>22</b>	<b>Quantifying Zooplankton Swimming Behavior: The Question of Scale</b> .....	<b>333</b>
	<i>Laurent Seuront, Matthew C. Brewer, and J. Rudi Strickler</i>	

- 23 Identification of Interactions in Copepod Populations Using a Qualitative Study of Stage-Structured Population Models**.....361  
*Sami Souissi and Olivier Bernard*

### **Section III Simulation**

- 24 The Importance of Spatial Scale in the Modeling of Aquatic Ecosystems**.....383  
*Donald L. DeAngelis, Wolf M. Mooij, and Alberto Basset*
- 25 Patterns in Models of Plankton Dynamics in a Heterogeneous Environment**.....401  
*Horst Malchow, Alexander B. Medvinsky, and Sergei V. Petrovskii*
- 26 Seeing the Forest for the Trees, and Vice Versa: Pattern-Oriented Ecological Modeling** ..... 411  
*Volker Grimm and Uta Berger*
- 27 Spatial Dynamics of a Benthic Community: Applying Multiple Models to a Single System** .....429  
*Douglas D. Donelson, Robert A. Desharnais, Carlos D. Robles, and Roger M. Nisbet*
- 28 The Effects of Langmuir Circulation on Buoyant Particles**.....445  
*Eric D. Skyllingstad*
- 29 Modeling of Turbulent Intermittency: Multifractal Stochastic Processes and Their Simulation** ..... 453  
*François G. Schmitt*
- 30 An Application of the Lognormal Theory to Moderate Reynolds Number Turbulent Structures** .....469  
*Hidekatsu Yamazaki and Kyle D. Squires*
- 31 Numerical Simulation of the Flow Field at the Scale Size of an Individual Copepod**.....479  
*Houshuo Jiang*
- 32 Can Turbulence Reduce the Energy Costs of Hovering for Planktonic Organisms?**.....493  
*Hidekatsu Yamazaki, Kyle D. Squires, and J. Rudi Strickler*
- 33 Utilizing Different Levels of Adaptation in Individual-Based Modeling** .....507  
*Geir Huse and Jarl Giske*

<b>34</b>	<b>Using MultiAgent Systems to Develop Individual-Based Models for Copepods: Consequences of Individual Behavior and Spatial Heterogeneity on the Emerging Properties at the Population Scale</b> .....	<b>523</b>
	<i>Sami Souissi, Vincent Ginot, Laurent Seuront, and Shin-Ichi Uye</i>	
<b>35</b>	<b>Modeling Planktonic Behavior as a Complex Adaptive System</b> .....	<b>543</b>
	<i>Atsuko K. Yamazaki and Daniel Kamykowski</i>	
<b>36</b>	<b>Discrete Events-Based Lagrangian Approach as a Tool for Modeling Predator-Prey Interactions in the Plankton</b> .....	<b>559</b>
	<i>Philippe Caparroy</i>	
	<b>Index</b> .....	<b>575</b>

## *Comparison of Biological Scale Resolution from CTD and Microstructure Measurements*

---

Fabian Wolk, Laurent Seuront, Hidekatsu Yamazaki, and Sophie Leterme

### CONTENTS

1.1	Introduction .....	3
1.2	Microscale Structure in Aquatic Ecosystems: Perspectives .....	4
1.2.1	Aquatic Ecosystem Functioning .....	4
1.2.2	Impact of the Sampling Process .....	5
1.3	Comparison of High-Resolution Data and Conventional Techniques .....	7
1.3.1	Instrument Description .....	7
1.3.2	Sensor Deployment .....	9
1.3.3	Differential Structure of Standard and High-Resolution Fluorescence Signals .....	10
1.4	Conclusion .....	12
	Acknowledgments .....	13
	References .....	14

# 2

## *Measurement of Zooplankton Distributions with a High-Resolution Digital Camera System*

---

Mark C. Benfield, Christopher J. Schwehm, Rodney G. Fredericks, Gregory Squyres,  
Sean F. Keenan, and Mark V. Trevorrow

### CONTENTS

2.1	Introduction .....	17
2.2	Methods .....	19
2.2.1	System Description .....	19
2.2.1.1	Camera Housing.....	19
2.2.1.2	Power/Telemetry Housing.....	19
2.2.1.3	Strobed Light Sheet .....	20
2.2.1.4	Environmental Sensors and Frame .....	21
2.2.1.5	Winch and Sea Cable.....	21
2.2.1.6	Command and Control.....	21
2.2.1.7	Image and Data Processing .....	21
2.2.2	Knight Inlet Operations.....	22
2.3	Results .....	24
2.3.1	November 19 Cast in Hoeya Sound .....	25
2.3.2	November 21 Cast in Knight Inlet .....	25
2.4	Discussion.....	26
	Acknowledgments.....	28
	References .....	29

## *Planktonic Layers: Physical and Biological Interactions on the Small Scale*

---

Timothy J. Cowles

### CONTENTS

3.1	Introduction and Background.....	31
3.2	Small-Scale Planktonic Layers: Examples .....	33
3.2.1	East Sound, Washington .....	33
3.2.2	Continental Shelf, Oregon .....	34
3.3	Vertical Velocity Gradients: Measurements and Issues.....	39
3.3.1	What the ADV Measures .....	39
3.3.2	The Resolution of Vertical Shear.....	39
3.3.3	The Role of Vertical Mixing.....	43
3.4	Dye Injections: Analogues for Plankton Layers.....	43
3.5	Preliminary Estimates of the Horizontal Extent of Small-Scale Planktonic Layers.....	44
3.6	Trophic Implications of Sharp Vertical Gradients .....	44
3.7	Small-Scale Planktonic Structure: Questions to Address.....	45
3.8	Recommendations for Future Work.....	45
3.9	Conclusion.....	46
	Acknowledgments.....	46
	References .....	47

## *Scales of Biological–Physical Coupling in the Equatorial Pacific*

---

**Peter G. Strutton and Francisco P. Chavez**

### **CONTENTS**

4.1	Introduction .....	51
4.2	Oceanographic Setting .....	52
4.3	Data .....	53
4.4	Analysis .....	54
4.4.1	Cross-Correlation Analysis .....	54
4.4.2	Decorrelation Scale Analysis .....	55
4.4.3	Spectral Analysis .....	55
4.5	Results and Discussion .....	55
4.5.1	Cross-Correlation Analysis .....	56
4.5.2	Decorrelation Timescales .....	57
4.5.3	Spectral Analysis .....	59
4.6	Conclusions .....	61
	Acknowledgments .....	62
	References .....	62

# Acoustic Remote Sensing of Photosynthetic Activity in Seagrass Beds

Jean-Pierre Hermand

## CONTENTS

5.1	Introduction .....	66
5.2	Influence of Photosynthesis on Acoustics .....	67
5.2.1	Bubbles in Seawater .....	67
5.2.2	<i>Posidonia</i> Photosynthetic Apparatus .....	69
5.2.3	Oxygen Production .....	69
5.2.4	Gas in Matte and Sediment .....	69
5.3	The <i>USTICA</i> 99 Experiment .....	69
5.3.1	Test Site .....	69
5.3.2	Experimental Configuration .....	71
5.3.3	Acoustic Measurements .....	72
5.3.3.1	Signal Transmission .....	72
5.3.3.2	Ambient Noise Recording .....	72
5.3.3.3	Transducer Calibration .....	72
5.3.3.4	Equalized Matched-Filter Processing .....	73
5.3.4	Oceanographic Measurements: CTD and Dissolved Oxygen Content .....	73
5.4	Multiscale Acoustic Effects .....	75
5.4.1	Time-Varying Medium Impulse Response .....	75
5.4.2	Propagation Channel Modeling .....	77
5.4.3	Energy Time Distribution of Medium Response .....	80
5.4.4	Non-Photosynthesis-Related Effects .....	81
5.4.4.1	Tide .....	81
5.4.4.2	Sea Surface Motion .....	82
5.4.4.3	Water Temperature Profile .....	83
5.5	Effects of Photosynthesis on Sound Propagation .....	83
5.5.1	Time Variation of Dissolved Oxygen .....	83
5.5.2	Effect of Photosynthetic Bubbles on Multipaths .....	84
5.5.3	Effect on Reverberation .....	88
5.5.4	Effect on Ambient Noise .....	88
5.5.4.1	Spectral Characteristics .....	88
5.5.4.2	Time-Frequency Characteristics .....	90
5.5.4.3	Directional Characteristics .....	91
5.5.4.4	Other Observations .....	91
5.5.5	Gaseous Interchange of the Leaf Blade .....	91
5.6	Conclusion .....	92
	Acknowledgments .....	93
	Appendix 5.A Comparison with Earlier Experiments .....	94
	References .....	94

# 6

## *Multiscale in Situ Measurements of Intertidal Benthic Production and Respiration*

---

Dominique Davoult, Aline Migné, and Nicolas Spilmont

### CONTENTS

6.1	Introduction .....	97
6.2	Materials and Methods.....	98
6.3	Results .....	99
6.3.1	<i>In Situ</i> Measurements and Estimation of Daily Potential Primary Production.....	99
6.3.2	Seasonal Variations of Primary Production and Respiration .....	100
6.3.3	Temporal Resolution of Measurements and Microscale Adaptation of Microphytobenthos to Variations in Irradiance .....	102
6.3.4	Mesoscale Variations within the Gradient of Exposure .....	102
6.3.5	Microscale Variability .....	103
6.4	Conclusion and Perspectives.....	104
	Acknowledgments.....	105
	References.....	106

---

# *Spatially Extensive, High Resolution Images of Rocky Shore Communities*

---

**David R. Blakeway, Carlos D. Robles, David A. Fuentes, and Hong-Lie Qiu**

## **CONTENTS**

7.1	Introduction .....	109
7.1.1	The Intertidal Context .....	109
7.1.2	Limitations of Traditional Sampling Approaches .....	110
7.1.3	Spatially Extensive High Resolution Images (SEHRI).....	111
7.2	The System.....	111
7.3	Demonstration of Concept.....	113
7.3.1	Using the SEHRI in a GIS Database.....	113
7.3.2	Analysis of Patch Scale .....	116
7.3.3	Retrospective Analysis with the SEHRI.....	118
7.4	Discussion.....	119
7.4.1	Expanding the Utility of SEHRI .....	119
7.4.2	Limitations of the Technique and Recommendations for Optimizing Results.....	120
7.4.3	Photographic Equipment, Settings, and Conditions.....	120
7.5	Conclusions .....	121
	Acknowledgments .....	121
	References .....	121

---

# *Food Web Dynamics in Stable Isotope Ecology: Time Integration of Different Trophic Levels*

---

**Catherine M. O'Reilly, Pieter Verburg, Robert E. Hecky, Pierre-Denis Plisnier,  
and Andrew S. Cohen**

## **CONTENTS**

8.1	Introduction .....	125
8.2	Methods .....	126
8.3	Results and Discussion.....	127
8.3.1	Isotopic Structure of the Food Webs .....	127
8.3.2	Temporal Fluctuations in the Nutrient Source .....	128
8.3.3	Temporal Integration within the Food Web.....	129
8.4	Factors Sensitive to Time.....	129
8.4.1	Direct Effects.....	130
8.4.2	Indirect Effects .....	130
8.5	Conclusion .....	131
	Acknowledgments.....	131
	References .....	131

# 9

## *Synchrotron-Based Infrared Imaging of Euglena gracilis Single Cells*

---

Carol J. Hirschmugl, Maria Bunta, and Mario Giordano

### CONTENTS

9.1	Introduction .....	135
9.2	Experimental Details .....	137
9.2.1	Infrared Storage Ring Radiation .....	137
9.2.1.1	IRSR Power .....	137
9.2.1.2	IRSR Brightness .....	138
9.2.2	Brightness Limited Experiment: Infrared Microspectroscopy .....	138
9.2.3	Sample Preparation .....	138
9.2.4	Spectral Absorption Bands .....	140
9.3	Data Analysis and Results .....	141
9.3.1	Spectra .....	141
9.3.2	IR Images .....	142
9.3.3	Diffraction Limited Infrared Imaging .....	143
9.4	Discussion .....	144
9.5	Conclusion .....	145
	Acknowledgments .....	145
	References .....	146

## *Signaling during Mating in the Pelagic Copepod, Temora longicornis*

Jeannette Yen, Anne C. Prusak, Michael Caun, Michael Doall, Jason Brown,  
and J. Rudi Strickler

### CONTENTS

10.1	Introduction.....	149
10.2	Methods.....	150
	10.2.1 Trail Visualization.....	150
	10.2.2 Copepod Pheromones.....	151
10.3	Results and Discussion.....	151
	10.3.1 Scent Preferences.....	151
	10.3.2 Tracking Behavior.....	154
	10.3.3 Quantitative Analyses of Trail Structure and Odorant Levels.....	155
10.4	Conclusion.....	157
	Acknowledgments.....	158
	References.....	158

# 11

## *Experimental Validation of an Individual-Based Model for Zooplankton Swarming*

---

Neil S. Banas, Dong-Ping Wang, and Jeannette Yen

### CONTENTS

11.1	Introduction.....	161
11.2	Theory.....	163
11.2.1	Differentiating between Swarming and Diffusion.....	163
11.2.2	Diffusion in an Aggregative Force Field.....	164
11.2.3	Further Model Predictions.....	165
11.2.4	Swarming in Two and Three Dimensions.....	166
11.2.5	The Acceleration Field.....	166
11.3	Experiment.....	167
11.4	Analysis.....	168
11.4.1	Constructing a Statistical Ensemble.....	168
11.4.2	A Procedure for Testing Model Consistency.....	169
11.5	Results.....	170
11.5.1	Velocity Distributions.....	170
11.5.2	Velocity Autocorrelations and Fit Parameters.....	171
11.5.3	Acceleration Fields.....	173
11.6	Discussion.....	174
11.6.1	Model Consistency.....	174
11.6.2	Model Interpretation.....	175
11.6.2.1	Damping.....	175
11.6.2.2	Excitation.....	177
11.6.2.3	Concentrative Force.....	177
11.6.2.4	Physical-Behavioral Balances.....	177
11.7	Conclusion.....	178
	Acknowledgments.....	178
	References.....	178

# 12

## *On Skipjack Tuna Dynamics: Similarity at Several Scales*

---

Aldo P. Solari, Jose Juan Castro, and Carlos Bas

### CONTENTS

12.1	Introduction.....	183
12.2	Data.....	185
12.3	Methods.....	185
12.4	Results.....	186
12.5	Discussion.....	192
12.5.1	The Proposed Equations.....	193
12.5.2	The Phase Spaces.....	193
12.5.3	Variable Carrying Capacity (Ceilings, $K_i$ ).....	193
12.5.4	Minimum Populations (Floors, $P_i$ ).....	194
12.5.5	Multiple (Stable) Equilibria.....	194
12.5.6	Compensatory and Depensatory Dynamics.....	194
12.5.7	Extinction of the Commercial Fishery.....	195
12.5.8	Migration through a Fractal Marine System.....	195
	Acknowledgments.....	196
	References.....	197

## *The Temporal Scaling of Environmental Variability in Rivers and Lakes*

---

Hélène Cyr, Peter J. Dillon, and Julie E. Parker

### CONTENTS

13.1	Introduction.....	201
13.2	Methods.....	203
13.3	Results.....	205
13.4	Discussion.....	208
	13.4.1 Environmental Variability Is Higher in Rivers Than Lakes.....	208
	13.4.2 The Scaling of Environmental Variability in Rivers and Small Lakes.....	209
	13.4.3 Changes in the Scaling of Environmental Variability at Different Timescales.....	210
	13.4.4 Ecological Implications.....	210
13.5	Summary.....	210
	Acknowledgments.....	211
	References.....	211

# 14

---

## *Biogeochemical Variability at the Sea Surface: How It Is Linked to Process Response Times*

---

**Amala Mahadevan and Janet W. Campbell**

### **CONTENTS**

14.1	Introduction.....	215
14.2	Tracer Distributions and Transport.....	215
14.3	Quantifying Variability .....	218
	14.3.1 Analysis of Satellite Data.....	220
	14.3.2 Analysis of Model Fields.....	220
14.4	Modeling and Results.....	222
	14.4.1 How Patchiness Relates to Response Time $\tau$ .....	222
	14.4.2 Dependence of the Vertical Distribution of a Tracer on $\tau$ .....	224
	14.4.3 Resolution Requirements for Tracers with Different $\tau$ .....	225
14.5	Discussion.....	225
14.6	Conclusions.....	226
	Acknowledgments.....	226
	References.....	226

## *Challenges in the Analysis and Simulation of Benthic Community Patterns*

---

Mark P. Johnson

### CONTENTS

15.1	Empirical and Theoretical Treatments of Spatial Scale in Benthic Ecology.....	229
15.1.1	Rarity of Spatially Explicit Models for Benthic Systems.....	230
15.2	Robust Predictions from Spatial Modeling.....	231
15.3	Comparing Markov Matrix and Cellular Automata Approaches to Analyzing Benthic Data ....	231
15.3.1	Nonspatial (Point) Transition Matrix Models.....	233
15.3.2	Spatial Transition Matrix Models.....	234
15.3.3	Comparison of Empirically Defined Alternative Models.....	235
15.4	Extending the Spatial CA Framework.....	236
15.5	Conclusions.....	239
	Acknowledgment.....	240
	References.....	240

# 16

---

## *Fractal Dimension Estimation in Studies of Epiphytal and Epilithic Communities: Strengths and Weaknesses*

---

John Davenport

### CONTENTS

16.1	Introduction.....	245
16.2	Fractal Analysis and Biology.....	248
16.3	Fractal Dimensions in Ecology.....	249
16.4	How Is $D$ Estimated?.....	251
16.5	Areal Fractal Dimensions of Intertidal Rocky Substrata — An Investigation.....	252
16.6	Value of Fractal Dimension Estimation to Marine Ecological Study.....	253
16.7	Limitations of Fractal Analysis.....	254
	Acknowledgments.....	255
	References.....	255

# 17

---

## *Rank-Size Analysis and Vertical Phytoplankton Distribution Patterns*

---

James G. Mitchell

### CONTENTS

17.1	Introduction.....	257
17.1.1	Data Set Size in Biological Oceanography.....	257
17.1.2	Initial Analysis.....	258
17.1.3	Rank-Size Method.....	258
17.1.4	Recent Rank-Size Use.....	259
17.1.5	Rank-Size Interpretation.....	259
17.2	Low Resolution and Times Series Fluorescence Profiles.....	263
17.2.1	An Idealized Rank-Size Slope.....	268
17.3	Conclusion.....	275
	Acknowledgments.....	277
	References.....	277

# 18

## *An Introduction to Wavelets*

---

Igor M. Dremin, Oleg V. Ivanov, and Vladimir A. Nechitailo

### CONTENTS

18.1	Introduction.....	279
18.2	Wavelets for Beginners.....	281
18.3	Basic Notions and Haar Wavelets.....	284
18.4	Multiresolution Analysis and Daubechies Wavelets.....	286
18.5	Fast Wavelet Transform.....	288
18.6	The Fourier and Wavelet Transforms.....	290
18.7	Technicalities.....	291
18.8	Scaling.....	293
18.9	Applications.....	293
18.10	Conclusions.....	296
	References.....	296

# *Fractal Characterization of Local Hydrographic and Biological Scales of Patchiness on Georges Bank*

Karen E. Fisher, Peter H. Wiebe, and Bruce D. Malamud

## CONTENTS

19.1	Introduction.....	297
19.2	Fractal Character of Underway Oceanographic Data.....	300
	19.2.1 U.S. GLOBEC Broadscale Surveys on Georges Bank.....	300
19.3	Wavelet-Based Variance Spectra.....	301
	19.3.1 Wavelet Transform.....	301
	19.3.2 Implementation.....	303
	19.3.3 Wavelet Analysis.....	305
	19.3.4 2D and 3D Representations of the Wavelet Transform.....	306
	19.3.5 Wavelet-Based Spectra.....	308
19.4	Seasonal Power Law Behavior.....	309
19.5	Hydrographic Region Power Law Behavior.....	310
	19.5.1 Well-Mixed Crest of the Bank.....	310
	19.5.2 Crossing Fronts of the Bank.....	311
	19.5.3 Stratified Flanks of the Bank.....	313
19.6	Fractal Interpolation.....	313
	19.6.1 Fractal Interpolation Equations.....	314
	19.6.2 Fractally Interpolated 2D Fluorescence Fields.....	315
	19.6.3 Implications for Future Work.....	317
19.7	Conclusions.....	317
	Acknowledgments.....	318
	References.....	318

# 20

---

## *Orientation of Sea Fans Perpendicular to the Flow*

---

Thomas Osborn and Gary K. Ostrander

### CONTENTS

20.1	Introduction.....	321
20.2	The Rayleigh Disc.....	322
20.3	Symmetry.....	324
20.4	Sea Fan Growth.....	325
20.5	Effects of the Bottom Boundary Layer.....	326
20.6	Orientation Relative to the Local Topography.....	326
20.7	Discussion and Conclusions.....	326
	References.....	327

# 21

---

## *Why Are Large, Delicate, Gelatinous Organisms So Successful in the Ocean's Interior?*

---

**Thomas Osborn and Richard T. Barber**

### **CONTENTS**

21.1	Introduction.....	329
21.2	Analysis.....	329
21.3	Discussion.....	331
21.4	Conclusion.....	331
	References.....	332

---

# *Quantifying Zooplankton Swimming Behavior: The Question of Scale*

---

Laurent Seuront, Matthew C. Brewer, and J. Rudi Strickler

## CONTENTS

22.1	Introduction .....	333
22.2	Recording Swimming Paths .....	337
22.2.1	Culture of <i>Daphnia</i> and Algae .....	337
22.2.2	Recording Three-Dimensional Swimming Behavior .....	337
22.3	Characterizing Swimming Paths .....	338
22.3.1	Swimming Path and Fractal Dimension .....	339
22.3.2	Measuring Fractal Dimensions .....	339
22.3.2.1	Compass Method .....	340
22.3.2.2	Box-Counting Method .....	341
22.4	Testing the Robustness of Fractal Dimension Estimates .....	341
22.4.1	On the Scale Dependence of Fractal Dimensions .....	341
22.4.2	Toward an Objective Identification of Scaling Range .....	342
22.4.3	Robustness of Fractal Dimension Estimating Algorithms .....	346
22.4.4	Two-Dimensional vs. Three-Dimensional Fractal Dimension Estimates .....	348

# Identification of Interactions in Copepod Populations Using a Qualitative Study of Stage-Structured Population Models

Sami Souissi and Olivier Bernard

## CONTENTS

23.1	Introduction.....	361
23.2	Method.....	363
23.2.1	Transient Behavior of a Stage-Structured Population Model.....	363
23.2.1.1	Basic Structural Transition Rules.....	363
23.2.1.2	Structural Transition Rules for Predation.....	364
23.2.2	Identification of Extrema in the Time-Series Abundance Data.....	365
23.2.3	Age and Stage-Structured Simulation Model.....	366
23.3	Results.....	367
23.3.1	Analysis of Transition Rules with Simulated Data.....	367
23.3.2	Identification of Predation Interactions in Copepod Development Experiments.....	368
23.3.2.1	Cannibalism in the Development of <i>A. clausi</i> .....	368
23.3.2.2	Predation of <i>A. clausi</i> Adults on the First Naupliar Stages of <i>E. acutifrons</i> .....	371
23.3.3	Identification of <i>in Situ</i> Interactions between Copepods in a Eutrophic Inlet of the Inland Sea of Japan.....	372
23.4	Discussion.....	374
	Appendix 23.A: Sketch of the Mathematical Proof of the Basic Structural Transition Rules.....	375
	Appendix 23.B: Sketch of the Mathematical Proof of the Transition Rules with Predation.....	376
	Acknowledgments.....	376
	References.....	377

## *The Importance of Spatial Scale in the Modeling of Aquatic Ecosystems*

---

**Donald L. DeAngelis, Wolf M. Mooij, and Alberto Basset**

### **CONTENTS**

24.1	Introduction.....	383
24.2	Spatial Scales in Aquatic Ecosystems: Origins and Effects.....	384
24.2.1	General Considerations of Spatial Scale in Models.....	384
24.2.2	Hierarchy of Spatial Scales.....	385
24.3	A Brief Survey of Spatial Scales in Models.....	386
24.3.1	Spatial Resolution Chosen to Reflect the Scale of Variation of Abiotic Conditions.....	386
24.3.1.1	Lower Trophic Level Biomass Dynamics: Marine Models.....	387
24.3.1.2	Lower Trophic Level Biomass Dynamics: Freshwater Models.....	388
24.3.1.3	Fish Movement and Dynamics: Marine Systems.....	388
24.3.1.4	Fish Movement and Dynamics: Streams.....	389
24.3.2	Spatial Resolution Chosen to Reflect Scale of Variation of Biotic Conditions.....	389
24.3.3	Spatial Scale Imposed by Individual Organism Size.....	390
24.3.4	Spatial Scale Imposed by Emergent Patterns.....	392
24.4	Discussion.....	393
	Acknowledgment.....	395
	References.....	395

## *Patterns in Models of Plankton Dynamics in a Heterogeneous Environment*

---

Horst Malchow, Alexander B. Medvinsky, and Sergei V. Petrovskii

### CONTENTS

25.1	Introduction.....	401
25.2	The Habitat Structure .....	402
25.3	The Model of Plankton–Fish Dynamics .....	403
	25.3.1 Parameter Set.....	403
	25.3.2 Rules of Fish School Motion .....	403
25.4	Numerical Study of Pattern Formation in a Heterogeneous Environment.....	404
	25.4.1 No Fish, No Environmental Noise, Connected Habitats.....	404
	25.4.2 One Fish School, No Environmental Noise, Connected Habitats: Biological Pattern Control.....	405
	25.4.3 Environmental Noise, No Fish, Connected Habitats: Physical Pattern Control .....	405
	25.4.4 Environmental Noise, No Fish, Separated Habitats: Geographical Pattern Control...	406
25.5	Conclusions.....	406
	Acknowledgments.....	407
	References .....	407

## *Seeing the Forest for the Trees, and Vice Versa: Pattern-Oriented Ecological Modeling*

---

Volker Grimm and Uta Berger

### CONTENTS

26.1	Introduction.....	411
26.2	Why Patterns, and What Are Patterns?.....	412
26.3	The Protocol of Pattern-Oriented Modeling.....	413
26.3.1	Formulate the Question or Problem.....	414
26.3.2	Assemble Hypotheses about the Essential Processes and Structures.....	414
26.3.3	Assemble Patterns.....	414
26.3.4	Choose State Variables, Parameters, and Scales.....	415
26.3.5	Construct the Model.....	415
26.3.6	Analyze, Test, and Revise the Model.....	416
26.3.7	Use Patterns for Parameterization.....	416
26.3.8	Search for Independent Predictions.....	416
26.4	Examples.....	417
26.4.1	Independent Predictions: The Beech Forest Model BEFORE.....	417
26.4.2	Parameterization of a Mangrove Forest Model.....	419
26.4.3	Habitat Selection of Stream Trout.....	422
26.5	Pattern-Oriented Modeling of Aquatic Systems.....	423
26.6	Discussion.....	424
	References.....	425

---

## *Spatial Dynamics of a Benthic Community: Applying Multiple Models to a Single System*

---

**Douglas D. Donalson, Robert A. Desharnais, Carlos D. Robles, and Roger M. Nisbet**

### CONTENTS

27.1	Introduction.....	429
27.2	Four Model Classes .....	430
27.3	Modeling Mussels in the Intertidal Zone.....	432
27.4	Examples of Model Verification and Validation .....	437
27.5	Discussion .....	441
	References .....	443

# 28

---

## *The Effects of Langmuir Circulation on Buoyant Particles*

---

**Eric D. Skyllingstad**

### **CONTENTS**

28.1	Introduction.....	445
28.2	Simulation Setup.....	446
28.3	Flow and Particle Patterns.....	447
28.4	Discussion.....	449
	References.....	452

## *Modeling of Turbulent Intermittency: Multifractal Stochastic Processes and Their Simulation*

---

François G. Schmitt

### CONTENTS

29.1	Introduction.....	453
29.2	Multiplicative Cascades to Describe Intermittency .....	454
29.2.1	Scaling and Intermittency for Velocity Fluctuations in Turbulence .....	454
29.2.2	The Multiplicative Cascade Model and Its Main Properties.....	454
29.2.2.1	Scaling Properties of Multiplicative Cascades.....	455
29.2.2.2	Correlation Properties of Multiplicative Cascades.....	456
29.3	Simulation of Discrete Cascades.....	457
29.4	Simulation of Continuous Cascades.....	459
29.4.1	Theory: Continuous Multiplicative Cascades .....	459
29.4.2	A Causal Lognormal Stochastic Equation and Its Properties .....	460
29.4.3	Simulation of a Continuous Lognormal Multifractal .....	462
29.5	Conclusion .....	463
Appendix 29.A	.....	464
Characteristic Functions .....		464
Infinitely Divisible Distributions .....		464
Stable Stochastic Integrals.....		465
References .....		466

## *An Application of the Lognormal Theory to Moderate Reynolds Number Turbulent Structures*

---

Hidekatsu Yamazaki and Kyle D. Squires

### CONTENTS

30.1	Introduction.....	469
30.2	Lognormal Theory.....	470
30.3	Simulations.....	471
30.4	Discussion.....	474
	30.4.1 Surface Turbulent Layer.....	475
	30.4.2 Subsurface Stratified Layer.....	477
	Acknowledgments.....	477
	References.....	478

## *Numerical Simulation of the Flow Field at the Scale Size of an Individual Copepod*

---

Houshuo Jiang

### CONTENTS

31.1	Introduction.....	479
31.2	Dynamic Coupling.....	481
31.2.1	Navier–Stokes Equations Governing the Flow Field around a Free-Swimming Copepod.....	481
31.2.2	Dynamic Equation of a Free-Swimming Copepod's Body.....	482
31.2.3	A Simple Example for the Dynamic Coupling.....	483
31.3	Numerical Simulation.....	484
31.3.1	Methods.....	484
31.3.2	Results.....	486
31.3.2.1	Comparison with an Observational Result.....	486
31.3.2.2	Swimming Behavior and Flow Geometry.....	487
31.3.2.3	Swimming Behavior and Feeding Efficiency.....	488
31.4	A Future Application.....	489
31.5	Concluding Remarks.....	489
	Acknowledgments.....	490
	References.....	490

## *Can Turbulence Reduce the Energy Costs of Hovering for Planktonic Organisms?*

Hidekatsu Yamazaki, Kyle D. Squires, and J. Rudi Strickler

### CONTENTS

32.1	Introduction.....	493
32.2	Methods.....	494
32.2.1	Flow Fields.....	494
32.2.1.1	Direct Numerical Simulation.....	494
32.2.1.2	Random Flow Simulation.....	496
32.2.2	Planktonic Swimming Models.....	497
32.2.2.1	Equation of Motion.....	497
32.2.2.2	Velocity-Based Swimming Model.....	498
32.2.2.3	Strain-Based Swimming Model.....	498
32.3	Results.....	499
32.3.1	Generated Flow Fields.....	499
32.3.2	Statistics.....	500
32.3.3	Mean Swim Velocity $V_{s2}$ .....	501
32.3.4	Ambient Flow Field $U_p$ .....	502
32.3.5	Particle Rising/Sinking Velocity $\Delta V_2$ .....	502
32.4	Discussion.....	503
Appendix 32.A: From Nondimensional Numbers to Dimensional Numbers.....		504
Acknowledgments.....		504
References.....		504

## *Utilizing Different Levels of Adaptation in Individual-Based Modeling*

Geir Huse and Jarl Giske

### CONTENTS

33.1	Introduction.....	507
33.2	Individual-Based Modeling.....	508
33.3	Methodology.....	509
33.3.1	The Attribute Vector.....	509
33.3.2	The Strategy Vector.....	509
33.3.3	Criteria for Evaluating Adaptation.....	510
33.4	Three Levels of Adaptation.....	510
33.4.1	Fixed Genetic Strategies.....	510
33.4.2	Phenotypic Plasticity.....	511
33.4.3	Individual Learning.....	512
33.4.3.1	Artificial Neural Networks.....	513
33.4.3.2	Supervised Learning.....	514
33.4.3.3	Reinforcement Learning.....	514
33.5	Case Studies.....	515
33.5.1	Overwintering Diapause in Daphnids.....	515
33.5.2	Diel Vertical Migration in a Salmonid.....	515
33.5.3	Antipredator Responses.....	516
33.6	Discussion.....	517
33.6.1	Pros and Cons of the Different Levels of Adaptation.....	517
33.6.2	The Baldwin Effect.....	517
33.7	Conclusions.....	518
	Acknowledgments.....	518
	References.....	518

# *Using Multiagent Systems to Develop Individual-Based Models for Copepods: Consequences of Individual Behavior and Spatial Heterogeneity on the Emerging Properties at the Population Scale*

Sami Souissi, Vincent Ginot, Laurent Seuront, and Shin-Ichi Uye

## CONTENTS

34.1	Introduction.....	523
34.2	Development of the Model.....	524
34.2.1	Main Characteristics of the <i>MobidyC</i> Platform.....	524
34.2.2	Life Cycle Representation.....	525
34.2.3	Model Architecture.....	525
34.2.3.1	Modeling Survival, Growth, and Molting of Individuals.....	527
34.2.3.2	Reproduction.....	528
34.2.3.3	Predation.....	528
34.2.3.3.1	Effect of Body Weight and Temperature on the Ingestion Rate.....	528
34.2.3.3.2	The Predation Task.....	528
34.3	Results.....	528
34.3.1	Simulation of the Mortality of a Single Stage: Role of the Demographic Noise.....	528
34.3.2	Simulation without Predation.....	530
34.3.3	Effect of Cannibalism and Spatial Representation.....	530
34.3.4	Effect of Predation on the Spatiotemporal Dynamics of the Population.....	530
34.4	Discussion.....	533
34.4.1	Toward an Improvement of Individual-Based Models.....	534
34.4.1.1	A Common Methodology for IBMs.....	534
34.4.1.2	Common Tools for IBMs.....	535
34.4.1.3	Common Languages and Common Descriptions for IBMs.....	536
34.4.2	IBMs and Population Dynamics of Zooplankton.....	536
34.5	Conclusion.....	538
Appendix 34.A	.....	539
Acknowledgments	.....	540
References	.....	540
